

About Us

At UNMC's Pediatric Pulmonology and Nebraska Regional CF Center, comprehensive services include three specialized areas which provide distinct services:

- **The Pediatric Pulmonology Center** supplies safe and reliable lung function testing for diagnosis and treatment of respiratory disease in children. It is the only medical practice in the state limited solely to the diagnosis and treatment of lung and airway diseases of children.
- **The Nebraska Regional Cystic Fibrosis Center** provides the diagnosis and treatment, home, education and nutritional planning for children and adults with cystic fibrosis for all of Nebraska and parts of the surrounding states.
- **The Adult Cystic Fibrosis Center**(Under construction)

These areas, along with other general tests and treatments, allow the Pediatric Pulmonology Center and the Nebraska Regional Cystic Fibrosis Center to provide comprehensive services to the region.
