

Resources

The Psychopharmacology Research Consortium is supported by faculty and other professional staff located at 515 South 26th Street, 5th floor. Facilities at this site include clinic space dedicated to research, a general laboratory, space for storage and review of study records, as well as general office space for staff. The Consortium also supports research activities at other sites in the area including the Omaha Veterans Administration Medical Center and Children's Healthcare Pavillion at Children's Hospital.

Faculty and staff currently associated with the Consortium have extensive experience with the scientific, clinical, and administrative aspects of clinical trials. Ours is the oldest psychopharmacology group in the region.
