Nebraska Rural Health Works Health Economic Profile for Kimball County, Nebraska

Prepared by
Li-Wu Chen, Ph.D., Project Director
Michelle Mason, M.A., Health Data Analyst
Liyan Xu, M.S., Health Data Analyst

August 2007

Executive Summary on the Economic Impact of the Health Care Sector

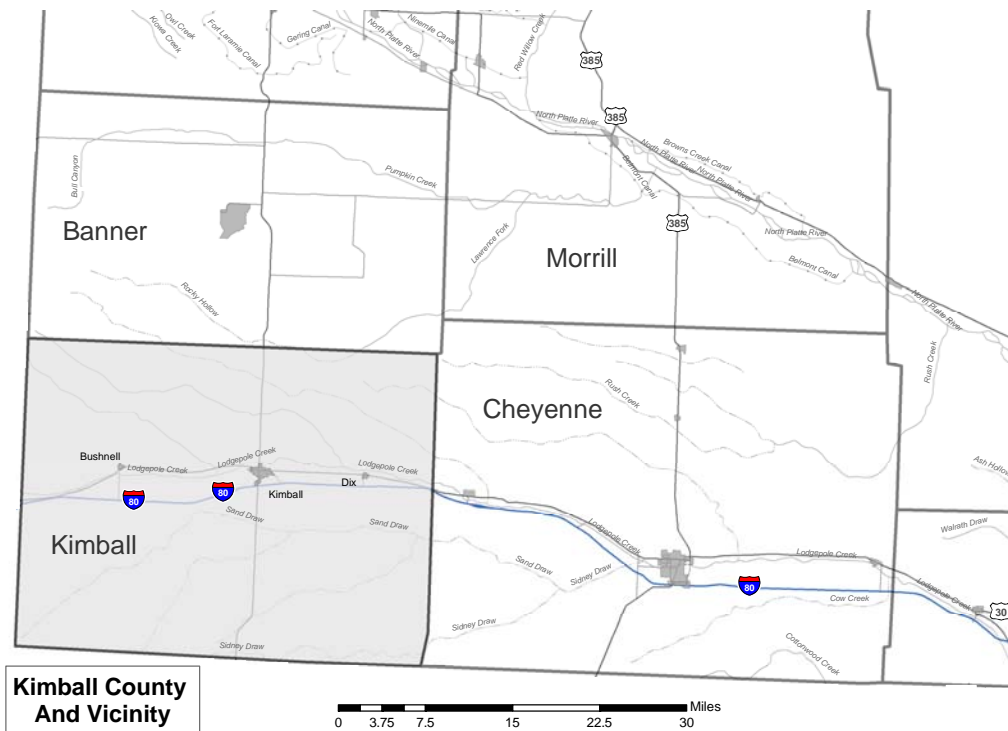

- ◆ One job created in the health care sector of Kimball County would lead to the creation of another 0.27 job in other sectors of the county's economy.
- ◆ One dollar of income earned in the health care sector of Kimball County would lead to another \$0.22 of income earned in other sectors of the county's economy.
- ◆ One dollar spent in the health care sector of Kimball County would lead to another \$0.31 spent in other sectors of the county's economy.
- ◆ The overall job creation due to health care (directly and indirectly) in Kimball County is estimated at 326 jobs, which accounts for 10.5% of the county's total employment.
- ◆ The overall income earned due to health care (directly and indirectly) in Kimball County is estimated at \$7.56 million, which accounts for 8.7% of the county's total income.
- ◆ The overall spending due to health care (directly and indirectly) in Kimball County is estimated at \$16.1 million, which accounts for 5.7% of the county's total economic output.

PR07-3

I. GEOGRAPHY

Kimball County is located at the southwest corner of Nebraska's panhandle. The county has a total of 952 square miles with a population density of 4.3 people per square mile (Nebraska: 22.3 per square mile). The county seat of Kimball County is Kimball, Nebraska.

Kimball County, Nebraska

II. POPULATION

The population for Kimball County was 4,089 in 2000. The county experienced a negative population change of -16.2% (compared to +9.0% statewide) during 1980-2000 (Figure 1). Although the county's minority population has increased during the last decade, white (non-Hispanic) people still represented the great majority of county population in 2000 (97.0% vs. 89.6% statewide, Table 1). In addition, the county's population is older than the state's, with the elderly (aged 65+) representing 21.0% (compared to 13.6% statewide) of the population in 2000 (Table 2).

III. ECONOMIC IMPACT OF THE HEALTH CARE SECTOR

Manufacturing is the largest employer within Kimball County, followed by retail trade, health care and social assistance, arts, entertainment, and recreation, and administration, support, waste management, and remediation services. The health care sector of Kimball County includes one hospital, one nursing home, one physician office, one dentist office, one optometry office, one chiropractor office, one podiatry office, and two pharmacies.

- ◆ The 256 jobs in the health care sector of Kimball County created (through a 1.27 multiplier) another 70 jobs in other sectors of the county's economy (Figure 2). Therefore, the combined effect represents 10.5% of the county's total employment (i.e., 326 out of 3,097 jobs).
- ◆ The \$6.20 million of income earned in the health care sector of Kimball County has created (through a 1.22 multiplier) another \$1.35 million of income in other sectors of the county's economy (Figure 3). Therefore, the combined effect represents 8.7% of the county's total income (i.e., \$7.56 million out of \$86.99 million).
- ◆ The \$12.35 million spent in the health care sector of Kimball County created (through a 1.31 multiplier) another \$3.80 million of spending in other sectors of the county's economy (Figure 4). Therefore, the combined effect represents 5.7% of the county's total economic output (i.e., \$16.15 million out of \$285.60 million).

IV. SOCIO-ECONOMIC INDICATORS

The median household income of the county increased since 1990 by 31.6% to \$30,586 in 2000 (compared to \$39,250 statewide), and the per capita income of the county increased since 1990 by 57.8%, to \$17,525 in 2000 (compared to \$19,613 statewide) (Figure 5). Kimball County experienced a lower unemployment rate (2.0% vs. 3.5% statewide) but a higher poverty rate (11.1% vs. 9.7% statewide) than the state in 2000 (Figure 6). The county under-performed the state in three of the social indicators shown in Table 3, but had a lower crime arrest rate per 1,000 population (39.4 vs. 59.2 statewide).

V. HEALTH STATUS INDICATORS

Kimball County had a lower infant mortality rate and overall death rate, but had higher rates of unintentional injury death and motor vehicle death compared with the state between 1997 and 2001 (Figure 7). Kimball County had a higher rate of low-weight births, a higher percentage of births to adolescents, a higher percentage of pregnant women who smoke, and a lower percentage of women who reported obtaining prenatal care during their first trimester when compared to the state, shown in Figure 8. Among the top 5 leading causes of death of Kimball County residents, the county had a higher mortality rate than the state for unintentional injuries (Figure 9). Among the top 5 leading causes of hospitalization of Kimball County residents between 1999 and 2000, the county had a higher hospitalization rate than the state for pneumonia, digestive diseases, and genitourinary diseases (Figure 10).

*Hospitalizations for pregnancy and childbirth were excluded from this analysis.

**Defined as the proportion of inpatient hospital discharges to a population within clearly specified geographic boundaries, age adjusted per 100,000 population. Source: Nebraska Health and Human Services County Profiles. <http://www.hhs.state.ne.us/profile0802/Kimball/profile.htm>.

VI. HEALTH CARE PROFESSIONALS

Kimball County is federally designated as a Primary Care Professional Shortage Area and a Mental Health Professional Shortage Area. The state government has designated Kimball County as a health professional shortage area in the specialties of family practice, general surgery, pediatrics, OB/GYN, psychiatry, occupational therapy and physical therapy. Kimball County has a higher professional-to-population ratio than the state for physician assistants, chiropractors, and EMS professionals, but a lower ratio for other health professionals, shown in Figure 11.

Figure 11. Number of Practicing Health Professionals Per 1,000 Population, Kimball County and Nebraska, 2003

*Mental Health Professionals include Psychiatrists, Licensed Psychologists, Master Social Workers, Certified Professional Counselors, Licensed Mental Health Practitioners, and Marriage and Family Therapists.

** Emergency Medical Professionals include Emergency Medical Technician (EMT) Paramedic, EMT-Intermediate, EMT-Basic, and First Responders.

VII. HOSPITAL AND LONG-TERM CARE BEDS

Table 4 shows that Kimball County’s hospital and its long-term care industry have lower bed-to-population ratios than the state. As a result, the need for hospital inpatient care (for the general public) and long-term care may not be well met within the county.

Table 4. Selected Health Care Facility Bed-to-Population Ratios for Kimball County and Nebraska

	Kimball County	Nebraska
Number of hospital beds per 1,000 population	4.9**	5.6*
Number of Long Term Care beds per 1,000 elderly population (65+)	57.0*	80.6*

Data Notes

Using IMPLAN software and IMPLAN data for Nebraska's five health-related economic subsectors, we predict changes in overall economic activity as a result of change in health care subsectors. The IMPLAN software is based on an economic input-output model. To improve the accuracy of the dataset in order to better estimate health sector impact, we also use information from the U.S. Census Bureau's *County Business Patterns 2004* and the *American Hospital Association Annual Survey Database: Fiscal Year 2006*. Analysis is only performed at the county level.

Acknowledgments

We would like to thank Dennis Berens, at the Nebraska Office of Rural Health, for his enthusiastic support of the Nebraska Rural Health Works Project. We would also like to thank Michael Shambaugh-Miller and Nicole Van Osdel at the Nebraska Center for Rural Health Research for making the maps.

About the Nebraska Rural Health Works Project

The Nebraska Rural Health Works Project is made possible with the financial support of the Nebraska Office of Rural Health and through additional personnel and resources provided by the College of Public Health at the University of Nebraska Medical Center. The brief reports are designed to inform opinion leaders (from general business, health care, and government) in rural communities about the contribution health care makes to the county economy, both directly and indirectly. We use IMPLAN software, which uses an economic input-output model, to predict changes in overall economic activity as a result of change in the health care sector. In addition to the analysis of the economic impact of the health sector on a specific county, other information, such as demographics, socio-economic and health status indicators, health care professionals and facility bed capacity, are reported for a county.

If you would like to view additional County Profiles for Nebraska, please visit our Nebraska Rural Health Works website: <http://www.unmc.edu/rural/NeRHW>.

If you would like additional information regarding Nebraska's health care financing, health professionals, health status and health care delivery systems, visit the Nebraska Health Information Project website: <http://www.unmc.edu/nebraska>.

County Health Economic Profiles can be prepared upon request. At this time, we only perform analysis at the county level. If you are interested in this project, you can request a profile by contacting the Project Director, Li-Wu Chen, Ph.D. (liwuchen@unmc.edu), or Michelle Mason, M.A. (mmason@unmc.edu) at the Nebraska Center for Rural Health Research, College of Public Health, University of Nebraska Medical Center, (402)559-5260.
