Nebraska Rural Health Works Health Economic Profile for Cuming County, Nebraska

Prepared by
Li-Wu Chen, Ph.D., Project Director
Donadea Rasmussen, Graduate Research Assistant
Liyun Xu, Data Analyst

March 2004

Executive Summary on the Economic Impact of Health Care Sector

- ◆ One job created in the health care sector of Cuming County would lead to the creation of another 0.47 job in other sectors of the County's economy.
- ◆ One dollar of income earned in the health care sector of Cuming County would lead to another \$0.37 of income earned in other sectors of the County's economy.
- ◆ One dollar spent in the health care sector of Cuming County would lead to another \$0.65 spent in other sectors of the County's economy.
- ◆ The overall job creation due to health care (directly and indirectly) in Cuming County is estimated at 764 jobs, which accounts for 11.1% of the County's total employment.
- ◆ The overall income earned due to health care (directly and indirectly) in Cuming County is estimated at \$17.84 million, which accounts for 10.8% of the County's total income.
- ◆ The overall spending due to health care (directly and indirectly) in Cuming County is estimated at \$39.06 million, which accounts for 3.5% of the County's total economic output.

I. GEOGRAPHY

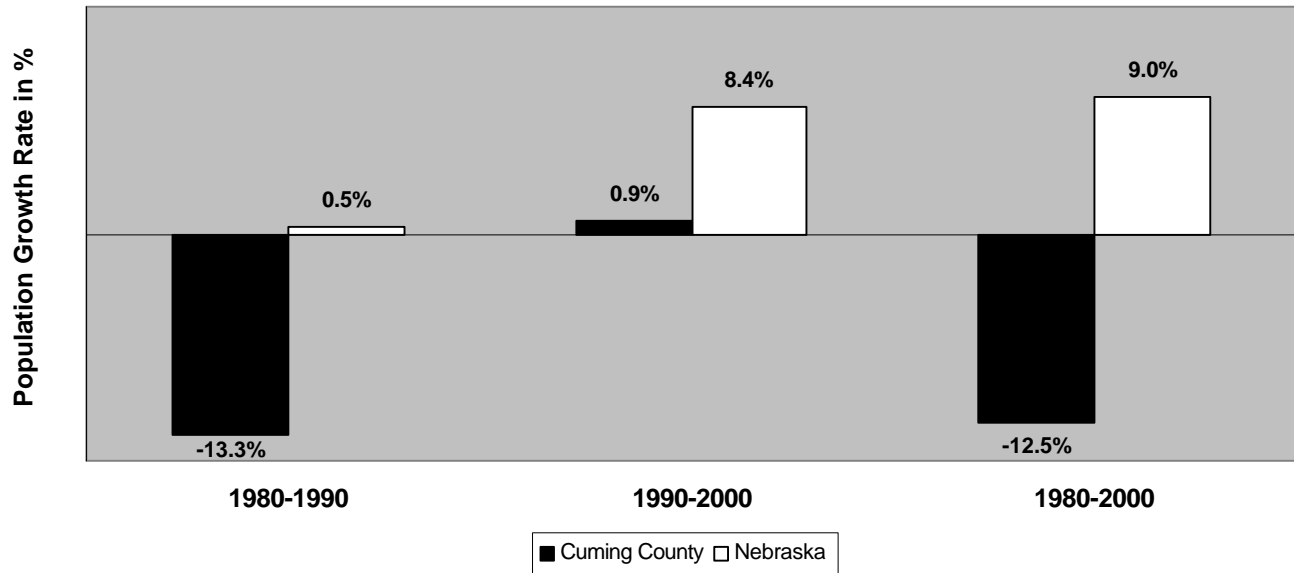

Cuming County is located near the northeast corner of Nebraska. The County has a total of 572 square miles with a population density of 17.8 people per square mile (Nebraska: 22.3 per square mile). The County seat of Cuming County is West Point, Nebraska.

II. POPULATION

The population for Cuming County was 10,203 in 2000. The County has experienced a negative population change of -12.5% (compared to +9.0% statewide) during 1980-2000 (Figure 1). Although the County's minority population has increased during the last decade, white (non-Hispanic) people still represented the great majority of County population in 2000 (96.7% vs. 89.6% statewide, Table 1). In addition, the County's population is older than the State's, with the elderly (aged 65+) representing 20.2% (compared to 13.6% statewide) of the population in 2000 (Table 2).

III. ECONOMIC IMPACT OF THE HEALTH CARE SECTOR

The Agricultural Industry is the largest employer within Cuming County, followed by Wholesale and Retail Trade, Services (excluding Health Care), Manufacturing, and State and Local Government (including Education). Health Care is the sixth largest employer in Cuming County. The Health Care sector of Cuming County includes one hospital, three nursing homes, two physician offices, four dentist offices, one optometry office, one chiropractor office, one audiology office, one mental health clinic, three assisted living facilities, and three pharmacies.

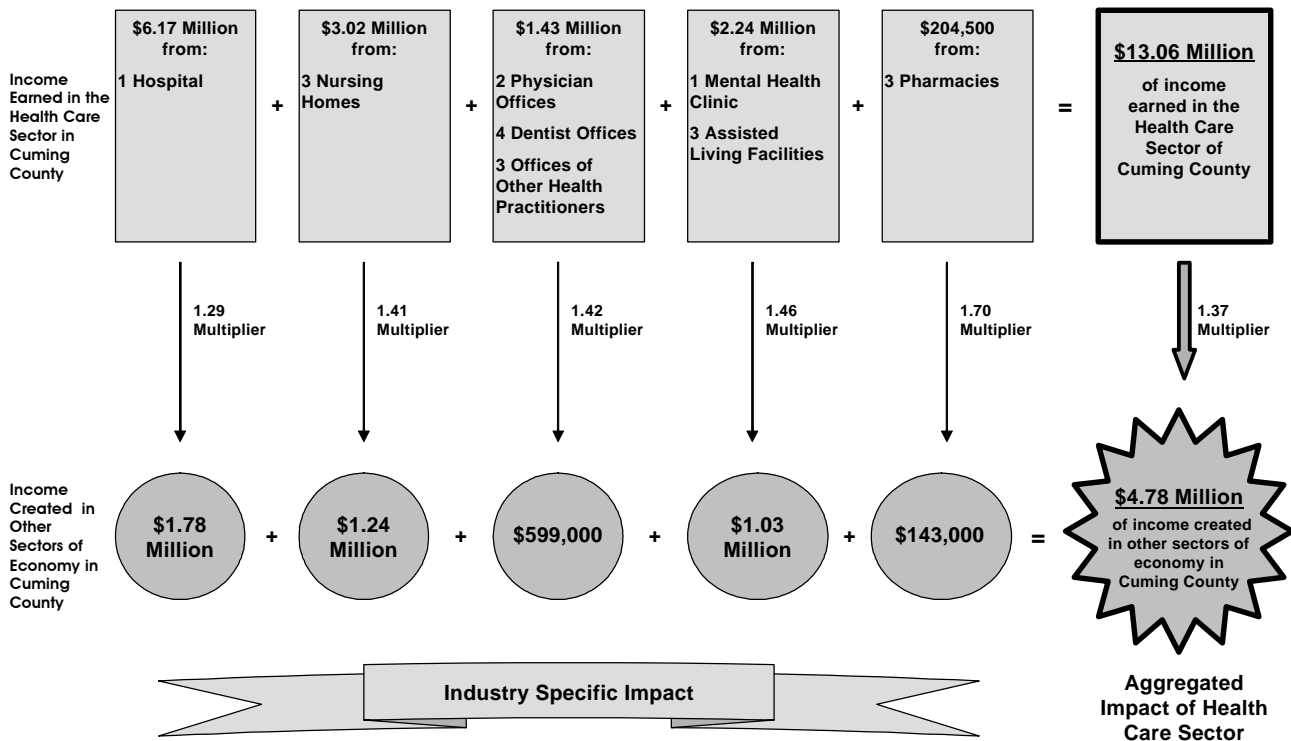

- ◆ The 518 jobs in the health care sector of Cuming County have created (through a 1.47 multiplier) another 246 jobs in other sectors of the County's economy (Figure 2). Therefore, the combined effect represents 11.1% of the County's total employment (i.e., 764 out of 6,857 jobs).
- ◆ The \$13.06 million of income earned in the health care sector of Cuming County has created (through a 1.37 multiplier) another \$4.78 million of income in other sectors of the County's economy (Figure 3). Therefore, the combined effect represents 10.8% of the County's total income (i.e., \$17.84 million out of \$165.03 million).
- ◆ The \$23.67 million spent in the health care sector of Cuming County has created (through a 1.65 multiplier) another \$15.39 million of spending in other sectors of the County's economy (Figure 4). Therefore, the combined effect represents 3.5% of the County's total economic output (i.e., \$39.06 million out of \$1,122.99 million).

IV. SOCIO-ECONOMIC INDICATORS

The per capita income of the County has increased since 1990 by 61.7% to \$16,443 in 2000 (compared to \$19,613 statewide), and the median household income of the County has increased since 1990 by 53.5% to \$33,186 in 2000 (compared to \$39,250 statewide) (Figure 5). Cuming County experienced a lower unemployment rate (2.0% vs. 3.5% statewide), and a lower poverty rate (9.0% vs. 9.7% statewide) than the State in 2000 (Figure 6). Moreover, the County out-performed the State in two of the social indicators shown in Table 3, but had a higher percentage of residents aged 25 and older who did not graduate from high school and higher percentage of first births to unmarried women, younger than 20, with less than a high school education.

V. HEALTH STATUS INDICATORS

The residents of Cuming County had a lower infant mortality rate and overall death rate, but had higher mortality rates for motor vehicle deaths and unintentional injury deaths compared with the State between 1997-2001 (Figure 7). Cuming County out-performed the State in three of the maternal and child health related indicators, but had a lower percent of pregnant women who reported obtaining prenatal care in 1st trimester, shown in Figure 8. Among the top 5 leading causes of death of Cuming County residents, the County had a higher mortality rate than the State for unintentional injuries (Figure 9). Among the top 5 leading causes of hospitalization of Cuming County's residents between 1999-2000, the County had a lower hospitalization rate than the State for all five health indicators (Figure 10).

* Hospitalizations for pregnancy and childbirth were excluded from this analysis.

**Defined as the proportion of inpatient hospital discharges to a population within clearly specified geographic boundaries, age adjusted per 100,000 population. Source: Nebraska Health and Human Services County Profiles. <http://www.hhs.state.ne.us/profile0802/Cuming/profile.htm>.

VI. HEALTH CARE PROFESSIONALS

Cuming County is federally designated as a medically underserved area, a mental health professional shortage area, and in some locations a dental health professional shortage area. The State government has designated Cuming County as a health professional shortage area in the specialties of: family medicine, general surgery, internal medicine, pediatrics, OB/GYN, psychiatry, and occupational therapy.

Cuming County has a higher professional-to-population ratio than the State for physician assistants, chiropractors, and emergency medical professionals, but a lower ratio for other health professionals shown in Figure 11.

Figure 11. Number of Practicing Health Professionals Per 1,000 Population, Cuming County and Nebraska, 2001

* Mental Health Professionals include: Psychiatrists, Licensed Psychologists, Master Social Workers, Certified Professional Counselors, Licensed Mental Health Practitioners, and Marriage and Family Therapists.

** Emergency Medical Professionals include: Emergency Medical Technician (EMT) Paramedics, EMT-Intermediate, EMT-Basic, and First Responders.

VII. HOSPITAL AND LONG-TERM CARE BEDS

Table 4 shows that Cuming County’s hospital has a lower bed-to-population ratio than the State but a slightly higher bed-to-population ratio for its long-term care industry. As a result, the need for hospital inpatient care (for the general public) may not be well met within the County.

Table 4. Selected Health Care Facility Bed-to-Population Ratios for Cuming County and Nebraska

	Cuming County	Nebraska
Number of hospital beds per 1,000 population	2.5**	5.6*
Number of Long Term Care beds per 1,000 elderly population (65+)	81.4*	80.6*

Data Notes

The economic impact results presented in this report were obtained from a compilation of secondary data derived from the IMPLAN database, the U.S. Census Bureau's, *County Business Patterns 2000*, and primary data from a Community Health Systems Assessment Survey. The IMPLAN software analyzes County level data using an economic input-output model. However, certain information required for reporting health sector impact (e.g., total payroll for employees in a County owned nursing home) cannot be obtained from the IMPLAN database. When this happened, we used the information from the U.S. Census Bureau's, *County Business Patterns 2000*, and the Community Health System Assessment Survey that we conducted to calculate estimates and used them to report County specific health sector data.

Acknowledgments

We would like to thank Dennis Berens, at the Nebraska Office of Rural Health, for his enthusiastic support to the Nebraska Rural Health Works Project. We would also like to thank Todd Consbruck, of Franciscan Care Services, for helping us collect data about Cuming County. Finally, we would like to thank Michael Shambaugh-Miller, Ph.D., and Brian Hesford, at the Nebraska Center for Rural Health Research, for their help with making the maps, and to the members of this project's advisory committee for their insightful comments on this report.

About the Nebraska Rural Health Works Project

The Nebraska Rural Health Works Project is a partnership made possible with the financial support of the Nebraska Office of Rural Health, the Nebraska Hospital Association, and through additional personnel and resources provided by the University of Nebraska Medical Center. The brief reports are designed to inform opinion leaders (from general business, health care, and government) in rural communities about the contribution health care makes to the local economy, both directly and indirectly. We used the IMPLAN software, which uses an economic input-output model, to predict changes in overall economic activity as a result of change in the health care sector. In addition to the analysis of the economic impact of the health sector on a specific community, other information such as: demographics, socio-economic and health status indicators, health care professionals and facility bed capacity are reported for a community. The Nebraska Rural Health Works website is: <http://www.unmc.edu/rural/NeRHW>.

If you would like additional information regarding Nebraska's health care financing, health professionals, health status and health care delivery systems, visit the Nebraska Health Information Project website: <http://www.unmc.edu/nebraska>.

Community Health Economic Profiles will be prepared upon request. Those communities interested in this project can request a profile by contacting the Project Director, Li-Wu Chen, Ph.D. (liwuchen@unmc.edu), or Donadea Rasmussen (drasmuss@unmc.edu) at the Nebraska Center for Rural Health Research, University of Nebraska Medical Center, (402) 559-5260.
