Nebraska Rural Health Works Health Economic Profile for Saline County, Nebraska

Prepared by
Donadea Rasmussen, Graduate Research Assistant
Li-Wu Chen, Ph.D., Project Director
Liyan Xu, M.S., Data Analyst

May 2004

Executive Summary on the Economic Impact of Health Care Sector

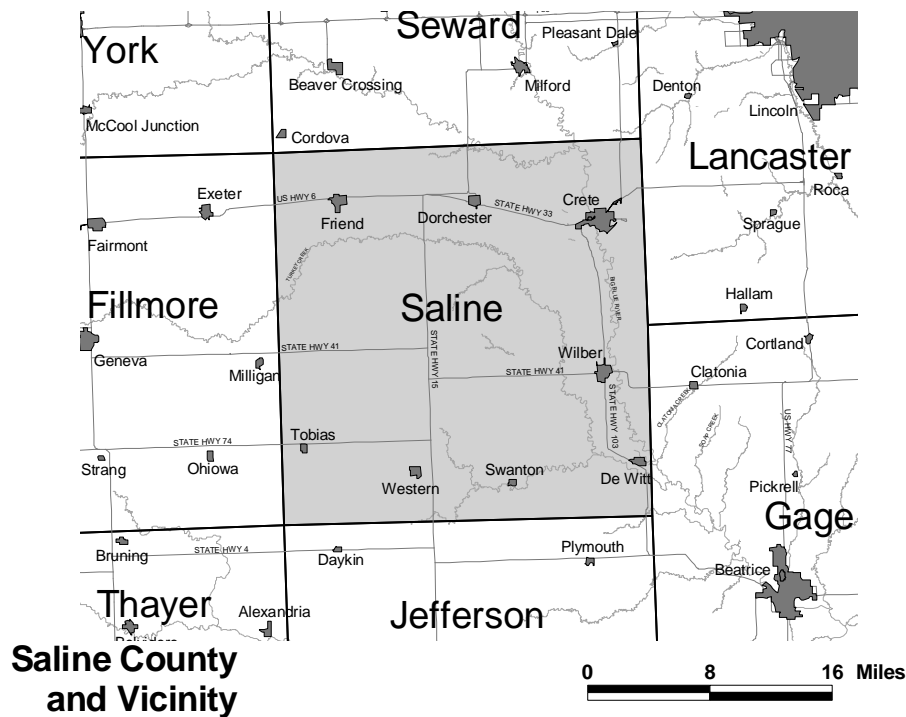

- ◆ One job created in the health care sector of Saline County would lead to the creation of another 0.33 job in other sectors of the County's economy.
- ◆ One dollar of income earned in the health care sector of Saline County would lead to another \$0.26 of income earned in other sectors of the County's economy.
- ◆ One dollar spent in the health care sector of Saline County would lead to another \$0.46 spent in other sectors of the County's economy.
- ◆ The overall job creation due to health care (directly and indirectly) in Saline County is estimated at 741 jobs, which accounts for 8.4% of the County's total employment.
- ◆ The overall income earned due to health care (directly and indirectly) in Saline County is estimated at \$17.95 million, which accounts for 7.3% of the County's total income.
- ◆ The overall spending due to health care (directly and indirectly) in Saline County is estimated at \$33.98 million, which accounts for 3.1% of the County's total economic output.

I. GEOGRAPHY

Saline County is located near the southeast corner of Nebraska. The County has a total of 575 square miles with a population density of 24.1 people per square mile (Nebraska: 22.3 per square mile). The County seat of Saline County is Wilber, Nebraska.

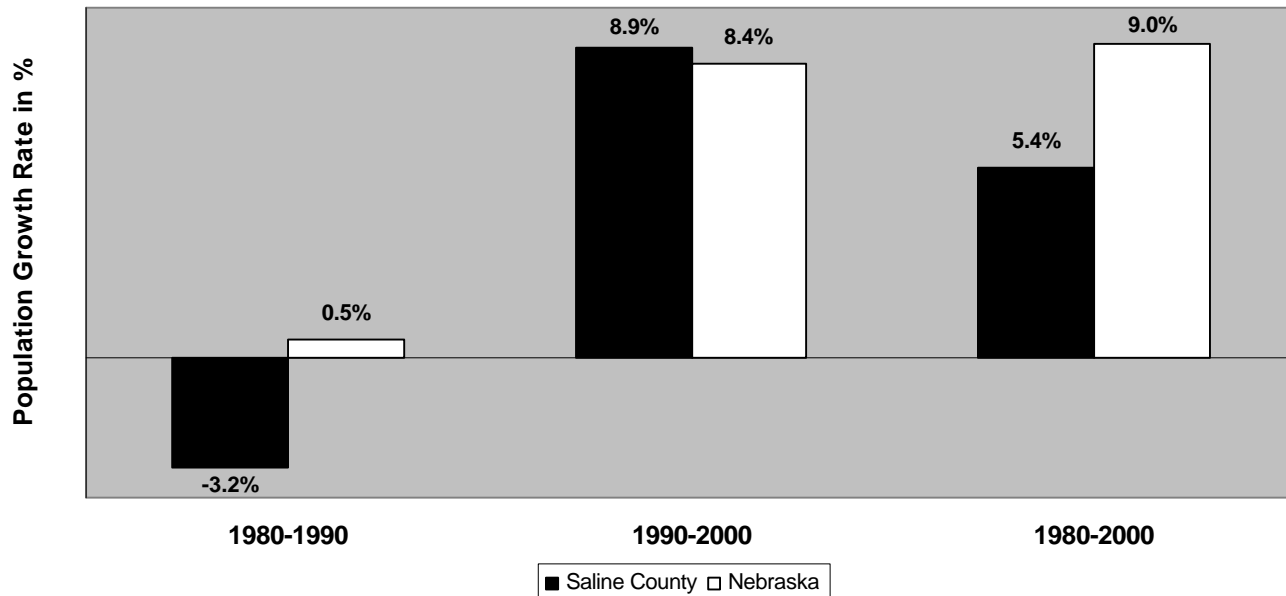

Saline County, Nebraska

II. POPULATION

The population for Saline County was 13,843 in 2000. The County has experienced a positive population growth of +5.4% (compared to +9.0% statewide) during 1980-2000 (Figure 1). Although the Hispanic population has increased during the past decade, white (non-Hispanic) people still represented the great majority of County population in 2000 (93.0%, Table 1). In addition, the County's population is slightly older than the State's, with the elderly (aged 65+) representing 17.2% (compared to 13.6% statewide) of the population in 2000 (Table 2).

III. ECONOMIC IMPACT OF THE HEALTH CARE SECTOR

The Manufacturing Industry is the largest employer within Saline County, followed by Retail Trade, Local and State Government (including Education), Services, and Agriculture. The Health Care sector of Saline County includes one hospital, three nursing homes, four residential facilities for the developmentally disabled, two assisted living facilities, four physician practices, six dentist practices, two optometry practices, three chiropractic practices, one podiatrist practice, one mental health clinic, one home health care agency, and four pharmacies.

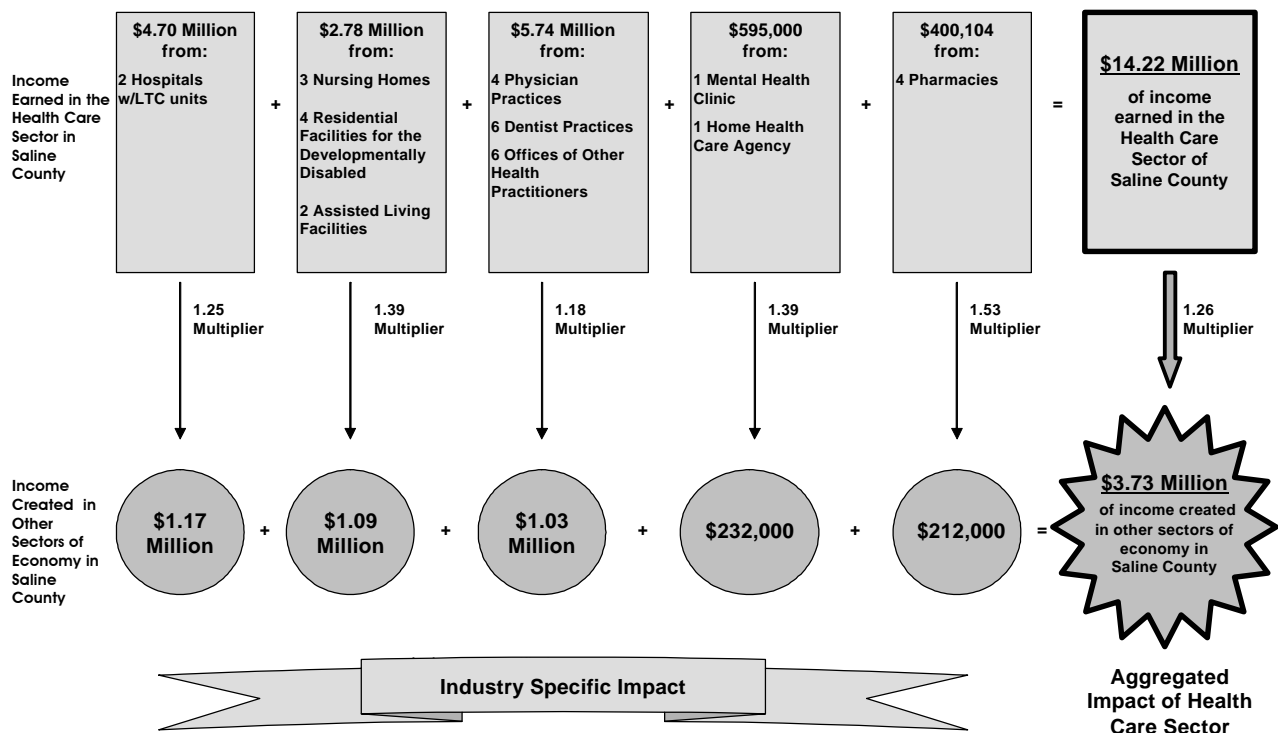

- ◆ The 557 jobs in the health care sector of Saline County have created (through a 1.33 multiplier) another 184 jobs in other sectors of the County's economy (Figure 2). Therefore, the combined effect represents 8.4% of the County's total employment (i.e. 741 out of 8,830 jobs).
- ◆ The \$14.22 million of income earned in the health care sector of Saline County has created (through a 1.26 multiplier) another \$3.73 million of income in other sectors of the County's economy (Figure 3). Therefore, the combined effect represents 7.3% of the County's total income (i.e. \$17.95 million out of \$247.40 million).
- ◆ The \$23.20 million spent in the health care sector of Saline County has created (through a 1.46 multiplier) another \$10.78 million of spending in other sectors of the County's economy (Figure 4). Therefore, the combined effect represents 3.1% of the County's total economic output (i.e. \$33.98 million out of \$108.99 billion).

IV. SOCIO-ECONOMIC INDICATORS

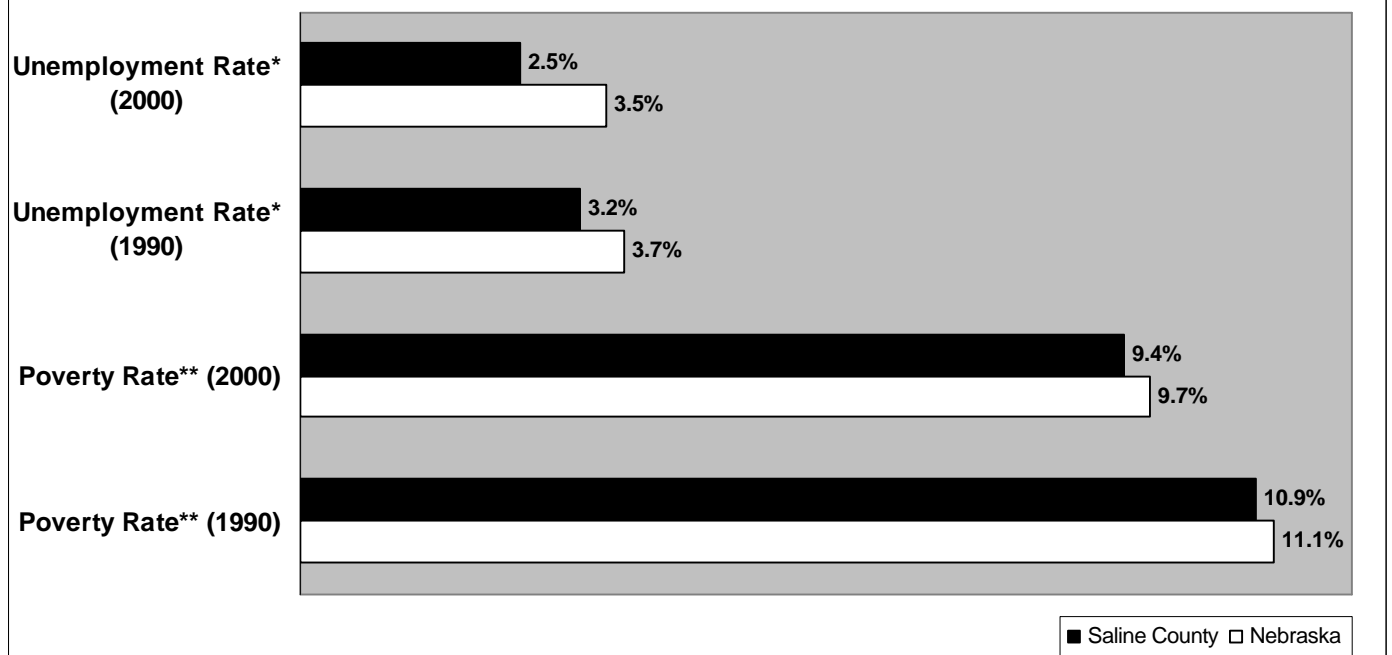

The per capita income of the County has increased since 1990 by 52% to \$16,287 in 2000 (compared to \$19,613 statewide), and the median household income of the County has increased since 1990 by 47% to \$35,914 in 2000 (compared to \$39,250 statewide) (Figure 5). Saline County experienced a lower unemployment rate (2.5% vs. 3.5% statewide), and poverty rate (9.4% vs. 9.7% statewide) than the State in 2000 (Figure 6). Moreover, the County out-performed the State in three of the four social indicators shown in Table 3, except for the percentage of residents aged 25 and older that did not graduate from high school.

Table 3. Selected Social Indicators for Saline County and Nebraska

	Saline County	Nebraska
Percent of residents aged 25 and older who did not graduate from high school (2000)	18.8%	13.4%
Percent of 7-12th graders who dropped out of school (2000-2001)	1.2%	2.5%
Percent of first births born to unmarried women, younger than 20, with less than a high school education (1997-2001)	8.1%	10.1%
Crime arrest rate per 1,000 population (1999)	40.7	59.2

V. HEALTH STATUS INDICATORS

The residents of Saline County had a higher overall death rate, motor vehicle death rate, and unintentional injury death rate compared to the State between 1997-2001 (Figure 7). Saline County out-performed the State in two of the maternal and child health related indicators, shown in Figure 8, but had a higher percentage of pregnant women who smoke, and a slightly lower percentage of pregnant women who received prenatal care in the first trimester. Among the top 5 leading causes of death of Saline County residents during 1997-2001, the County had a higher mortality rate than the State for heart disease, cerebrovascular disease, and unintentional injuries (Figure 9). Among the top 5 leading causes of hospitalization of Saline County's residents between 1999-2000, the County had a higher hospitalization rate than the State for injuries and musculoskeletal diseases (Figure 10).

Figure 10. Top 5 Leading Causes of Hospitalization* for Saline County and the Corresponding Hospitalization Rates for the County and Nebraska, 1999-2000**

* Hospitalizations for pregnancy and childbirth were excluded from this analysis.

**Defined as the proportion of inpatient hospital discharges to a population within clearly specified geographic boundaries, age adjusted per 100,000 population.

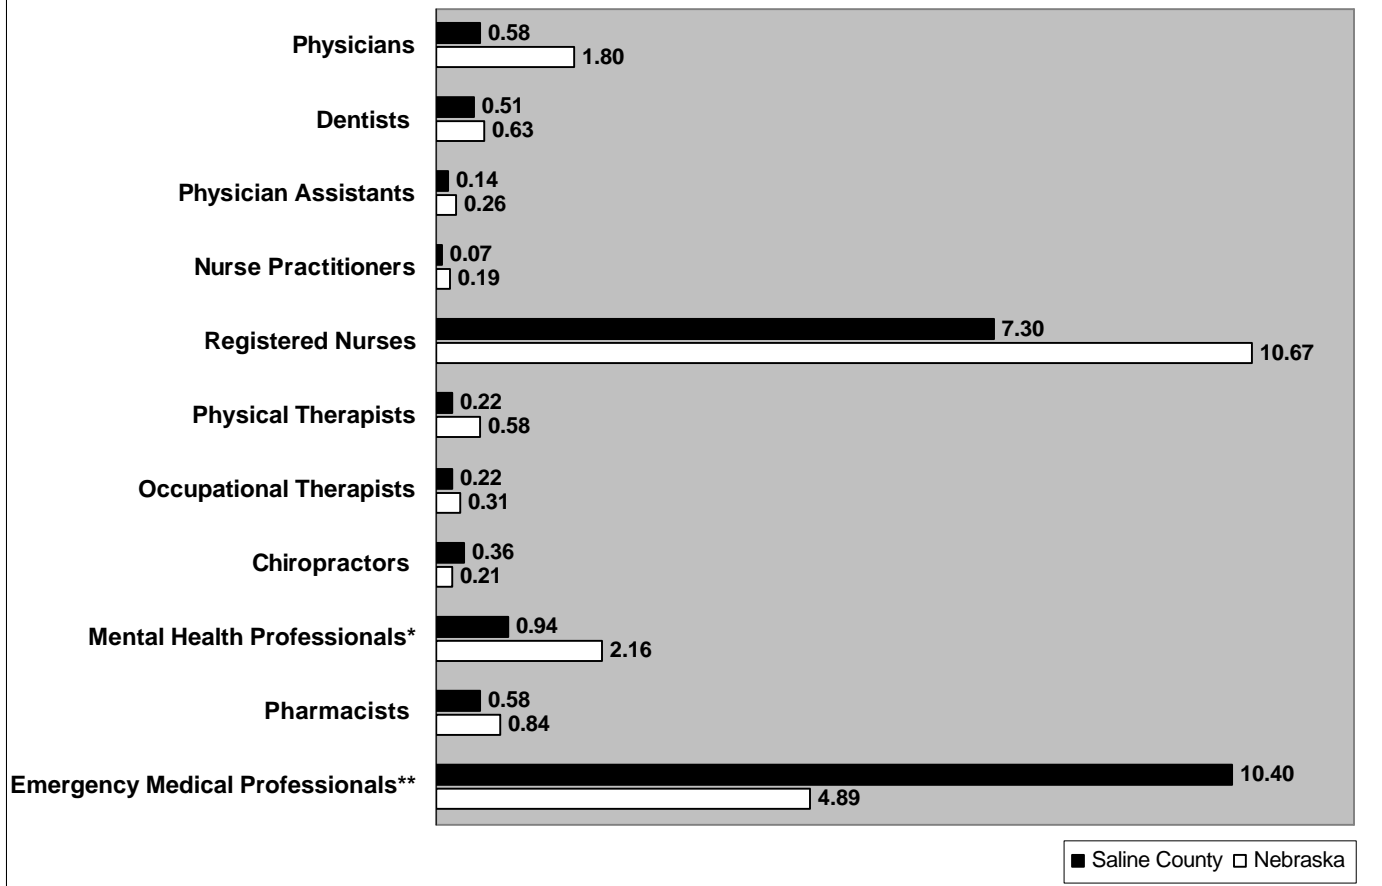

Source: Nebraska Health and Human Services County Profiles. <http://www.hhs.state.ne.us/profile0802/Saline/profile.htm>.

VI. HEALTH CARE PROFESSIONALS

In 2003, Saline County was federally designated as a medically underserved area and mental health professional shortage area. The State government also designated parts of Saline County as a health professional shortage area in the specialties of: family medicine, general surgery, internal medicine, pediatrics, obstetrics/gynecology, psychiatry, pharmacy and occupational therapy.

Saline County had a higher professional-to-population ratio than the State for chiropractors and emergency medical professionals in 2003, but a lower ratio for all other health professionals shown in Figure 11.

Figure 11. Number of Practicing Health Professionals Per 1,000 Population, Saline County and Nebraska, 2003

* Mental Health Professionals include: Psychiatrists, Licensed Psychologists, Master Social Workers, Certified Professional Counselors, Licensed Mental Health Practitioners, and Marriage and Family Therapists.
 ** Actively Licensed Emergency Medical Professionals include: Emergency Medical Technician (EMT) Paramedics, EMT-Intermediate, EMT-Basic, and First Responders.
 Source: *The Nebraska Health Information Project: 2003 Databook*. (2003) Nebraska Center for Rural Health Research, University of Nebraska Medical Center.

VII. HOSPITAL AND LONG-TERM CARE BEDS

Table 4. shows that Saline County’s hospitals have an overall lower bed-to-population ratio than the State but a higher bed-to-population ratio for its long-term care industry. As a result, the need for hospital inpatient care (for the general public) may not be well met within the County.

Table 4. Selected Health Care Facility Beds-to-Population Ratios for Saline County and Nebraska

	Saline County	Nebraska
Number of hospital beds per 1,000 population	2.9**	5.1*
Number of Long Term Care beds per 1,000 elderly population (65+)	110.7*	76.3*

Data Notes

The economic impact results presented in this report were obtained from a compilation of secondary data derived from the IMPLAN database, the U.S. Census Bureau's, *County Business Patterns 2000*, and primary data from a Community Health Systems Assessment Survey. The IMPLAN software analyzes county level data using an economic input-output model. However, certain information required for reporting health sector impact (e.g., total payroll for employees in a county owned nursing home) cannot be obtained from the IMPLAN database. When this happened, we used the information from the U.S. Census Bureau's, *County Business Patterns 2000*, and the Community Health System Assessment Survey that we conducted to calculate estimates and used them to report county specific health sector data.

Acknowledgments

We would like to thank Dennis Berens, at the Nebraska Office of Rural Health, for his enthusiastic support to the Nebraska Rural Health Works Project. We would also like to thank Amy Fish, of Warren Memorial Hospital, for helping us collect data about Saline County. Finally, we would like to thank Michael Shambaugh-Miller, Ph.D. and Brian Hesford, at the Nebraska Center for Rural Health Research, for their help with making the maps, and to the members of this project's advisory committee for their insightful comments on this report.

About the Nebraska Rural Health Works Project

The Nebraska Rural Health Works Project is a partnership made possible with the financial support of the Nebraska Office of Rural Health, the Nebraska Hospital Association, and through additional personnel and resources provided by the University of Nebraska Medical Center. The brief reports are designed to inform opinion leaders (from general business, health care, and government) in rural communities about the contribution health care makes to the local economy, both directly and indirectly. We used the IMPLAN software, which uses an economic input-output model, to predict changes in overall economic activity as a result of change in the health care sector. In addition to the analysis of the economic impact of the health sector on a specific community, other information such as: demographics, socio-economic and health status indicators, health care professionals and facility bed capacity are reported for a community. The Nebraska Rural Health Works website is: <http://www.unmc.edu/rural/NeRHW>.

If you would like additional information regarding Nebraska's health care financing, health professionals, health status and health care delivery systems, visit the Nebraska Health Information Project website: <http://www.unmc.edu/nebraska>.

Community Health Economic Profiles will be prepared upon request. Those communities interested in this project can request a profile by contacting the Project Director, Li-Wu Chen, Ph.D. (liwuchen@unmc.edu), or Donadea Rasmussen (drasmuss@unmc.edu) at the Nebraska Center for Rural Health Research, University of Nebraska Medical Center, (402) 559-5260.
