# Antiphospholipid syndrome (APS)

1999 → 2006 → 2023?

*Journal of Thrombosis and Haemostasis, 4: 295-306*

## Clinical criteria

1. **Thrombosis:** arterial / venous / microvascular, **or**
2. **Obstetric morbidity:** especially after the first trimester

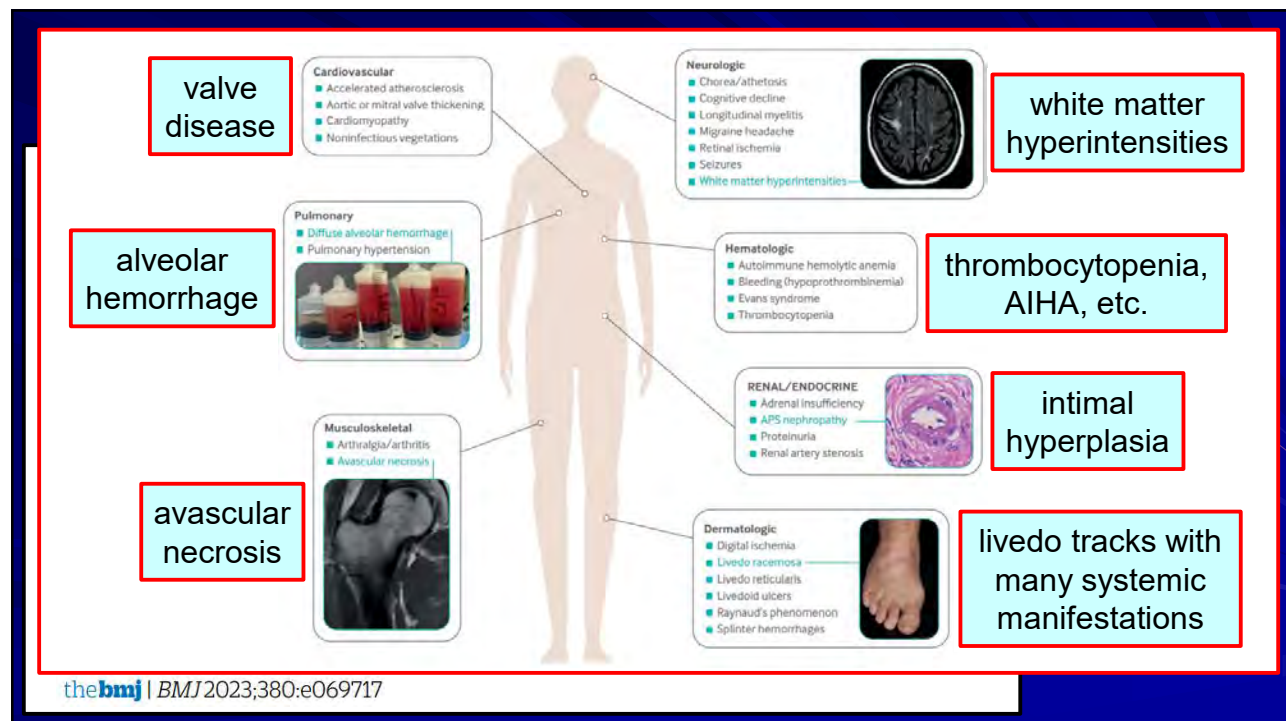

30-40% of cases linked to lupus

**AND**

## Laboratory criteria

1. **Lupus anticoagulant:** by functional assay, **or**
2. **Anticardiolipin antibodies:** IgG or IgM, **or**
3. **Anti-beta-2 glycoprotein-I antibodies:** IgG or IgM

5

6

# Antiphospholipid syndrome (APS)

1999 → 2006 → 2023?

*Journal of Thrombosis and Haemostasis, 4: 295-306*

## Clinical criteria

1. **Blood clots:** arterial / venous / microvascular, **or**
2. **Pregnancy loss:** especially after the first trimester

**AND**

## Laboratory criteria

1. **Lupus anticoagulant:** by functional assay, **or**
2. **Cardiolipin antibodies:** IgG or IgM, **or**
3. **Beta-2 glycoprotein-I antibodies:** IgG or IgM

7

# The best stories start or end with syphilis

*Proc Soc Exper Biol Med 1941*

## A New Serologically Active Phospholipid from Beef Heart.

MARY C. PANGBORN. (Introduced by Augustus B. Wadsworth.)

Alcoholic extracts of beef heart have long been used as antigens in the complement-fixation test for syphilis, but the substances responsible for the serologic activity of such extracts have not been identified. The isolation of a new phospholipid is here reported and evidence is presented that the new substance is the active component of the antigenic extracts.

**Cardiolipin:** a new phospholipid isolated from beef heart

■ Syphilis patients develop antibodies to cardiolipin

8

# False-positive syphilis test

**BIOLOGICA**

TABLE 1.—Approximate Incidence of Biologically False Positive Reactions in Various Nonsyphilitic Conditions

		Infections			
	Disease	Approximate Incidence of BFP * Reactions, %		Approximate Incidence of BFP Reactions, %	
<b>Bacterial</b>	Leprosy .....	60	<b>Rickettsial</b>	Typhus .....	20
	Tuberculosis, advanced.....	3-5			
	Pneumonia, pneumococcal.....	2-5	<b>Protozoal</b>	Trypanosomiasis .....	10
	Subacute bacterial endocarditis.....	5			
	Chancroid .....	5	<b>Viral</b>	Vaccinia .....	20
	Scarlatina .....	5		Pneumonia, "atypical" .....	20
<b>Spirochetal</b>	Leptospirosis .....	10		Measles .....	5
	Relapsing fever.....	80		Chickenpox .....	5
	Rat-bite fever.....	20	Lymphogranuloma venereum .....	20	

So, many lupus patients have antibodies to cardiolipin too

		Approximate Incidence of BFP Reactions
<b>Noninfectious Diseases or Conditions</b>		
Lupus erythematosus (disseminated or discoid).....		20
Rheumatoid arthritis .....		5
Blood loss, repeated (as in multiple donations for transfusion).....		? low
Pregnancy .....		? low

\* BFP = biologically false positive.

9

# Parallel story: circulating "anticoagulants" in lupus

J Lab Clin Med (1963) 62:416

## Thrombosis in systemic lupus

Blood seems too "thin" in the test tube...

...but too "thick" in the person

It turns out that laboratory clotting tests contain lots of phospholipids...

...as an artificial cell surface where the clotting process can begin

Antiphospholipid antibodies → artifactually prolong clotting times

Eventually standardized to create the "lupus anticoagulant" test

10

## Hughes and colleagues

BRITISH MEDICAL JOURNAL

**Thrombotic  
associations  
anticoagulant**

M L BOEY, C

TABLE I—Serological and clinical findings in patients with and without lupus anticoagulant

	Patients with lupus anticoagulant (n = 31)	Patients without lupus anticoagulant (n = 29)	p value
<b>Serological findings:</b>			
Biological false positive reaction for syphilis	7	0	<0.05
DNA binding (>30%)	11	16	NS
Extractable nuclear antigens (ribonucleoprotein, Sm, Ro, La)	13	16	NS
<b>Clinical findings:</b>			
Thrombosis	18	3	<0.01
Previous abortions*	9	5	NS
Thrombocytopenia	9	1	<0.02
Disease of central nervous system	17	10	NS

NS = Not significant.

\* 26 women in group with anticoagulant, 27 in group without.

11

By the mid 1980s, we knew that...

- The *lupus anticoagulant* phenotype associated with thrombosis and pregnancy loss.
- And, patients with positive lupus anticoagulant were also likely to have *anticardiolipin* antibodies.
- However... purified "*antiphospholipid*" antibodies often failed to bind phospholipids in the absence of serum!
- Were we missing protein cofactors in serum?

12

# Cofactor #1 = beta-2 glycoprotein I ( $\beta_2$ GPI)

*Proc. Natl. Acad. Sci. USA*  
Vol. 87, pp. 4120-4124, June 1990  
Medical Sciences

**Anti-phospholipid antibodies are  
that includes a lipid-binding inhibitor  
 $\beta_2$ -Glycoprotein I (apolipoprotein  
(anti-cardiolipin antibodies/lipid-protein complex/thrombosis**

H. PATRICK McNEIL\*, RICHARD J. SIMPSON†, COLIN

\*University of New South Wales, School of Medicine, Saint George Hospital  
Institute for Cancer Research and The Walter and Eliza Hall Institute for

Communicated by K. Frank Austen, March 15, 1990

■ Oh wow—so it turns out that many relevant “antiphospholipid” antibodies actually bind  $\beta_2$ GPI

13

# Cofactor #2 = prothrombin

prothrombin bound to a phosphatidylserine-coated plate (PS/PT)

IgG aPS/PT

IgG aPT

prothrombin alone

14

## Why research APS?

- Stroke and pulmonary embolism and post-thrombotic syndrome and stillbirth are major causes of morbidity in the general population. As the *prototypical thrombo-inflammatory disease*, APS may teach us a lot.
- We hear a lot about personalized medicine for cancer and diabetes and lupus—APS needs this too!
- It's more common than you think (1 in 2000) 
- But how common are antiphospholipid antibodies?

15

## Dallas Heart Study + antiphospholipid antibodies

Among the 2427 participants in DHS2 (blood samples collected between 2007 and 2009) included in this study, 1399 (57.6%) were female, 1244 (51.3%) were Black, 339 (14.0%) were Hispanic, and 796 (32.8%) were White; the mean (SD) age at the time of sampling was 50.6 (10.3) years.

aPL	No. positive (%)	
	Manufacturer's threshold <sup>a</sup>	Titer ≥40 units
aCL IgG <sup>b</sup>	26 (1.0)	7 (0.3)
aCL IgM <sup>b</sup>	156 (6.4)	36 (1.5)
aCL IgA	11 (0.5)	6 (0.3)
aβ2GPI IgG <sup>b</sup>	21 (0.9)	10 (0.4)
aβ2GPI IgM <sup>b</sup>	63 (2.6)	26 (1.0)
aβ2GPI IgA	62 (2.5)	29 (1.2)
aPS/PT IgG	18 (0.7)	11 (0.5)
aPS/PT IgM	88 (3.4)	48 (2.0)
Any positive	353 (14.5)	153 (6.3)
Three positive aPL	17 (0.7)	2 (0.08)

More likely to find IgM and IgA antibodies than IgG

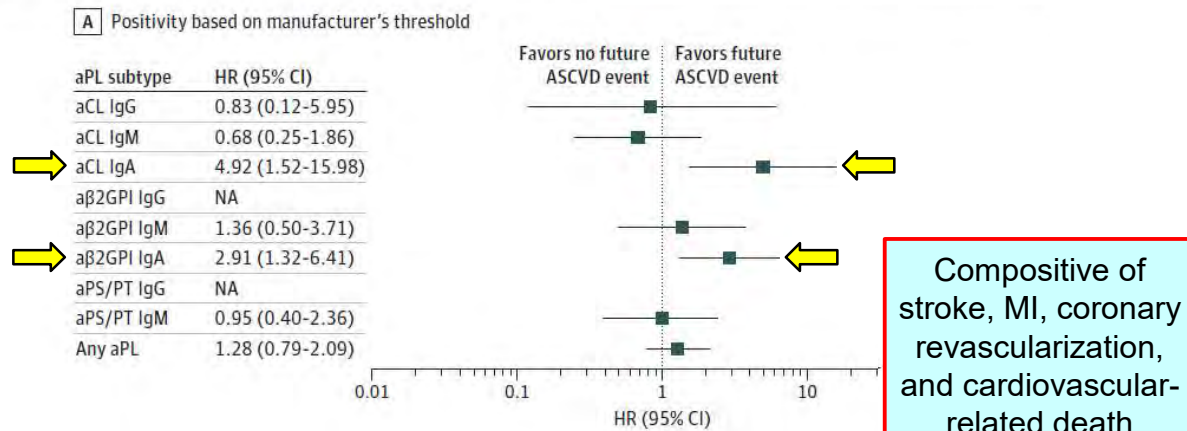

JAMA Network Open. 2023;6(4):e236530. doi:10.1001/jamanetworkopen.2023.6530

16

## Dallas Heart Study + antiphospholipid antibodies

Figure 1. Association of aPL Subtypes With Future Atherosclerotic Cardiovascular Disease (ASCVD) Events

JAMA Network Open. 2023;6(4):e236530. doi:10.1001/jamanetworkopen.2023.6530

17

## Outline

- Brief background including some history of APS
- Let's talk about neutrophils and NETs!
- APS pathogenesis—and what it can potentially teach us about COVID-19
- For fun: some ginger with that?

18

## Neutrophils

- A type of white blood cell that is already fully armed when released into the bloodstream
- First responders against many types of infection 
- The human body produces  $2 \times 10^{11}$  neutrophils every day (*I'm contractually obligated to tell you this*) 
- Potentially problematic in the circulation and/or tissues (*i.e., the double-edged sword*) 

19

## Neutrophils do not...

- ...proliferate in the periphery
- ...have true subsets defined by different transcription factors; therefore, functional differences are likely mediated by stage of maturation or activation
- ...need oxygen for energy production (although they do need for fullest antimicrobial functions)
- ...make things easy on researchers (rapid apoptosis *in vitro*, low RNA content, mice=imperfect models)

20

# Neutrophil extracellular traps (NETs)

## Neutrophil Extracellular Traps Kill Bacteria

Science 2004

NETs are extracellular “spider webs” made of...  
**A**, Antimicrobial proteins (kill bacteria)  
**B**, DNA itself (the backbone of NETs)  
**C**, Other proteins from the nucleus (e.g., histones)

21

22

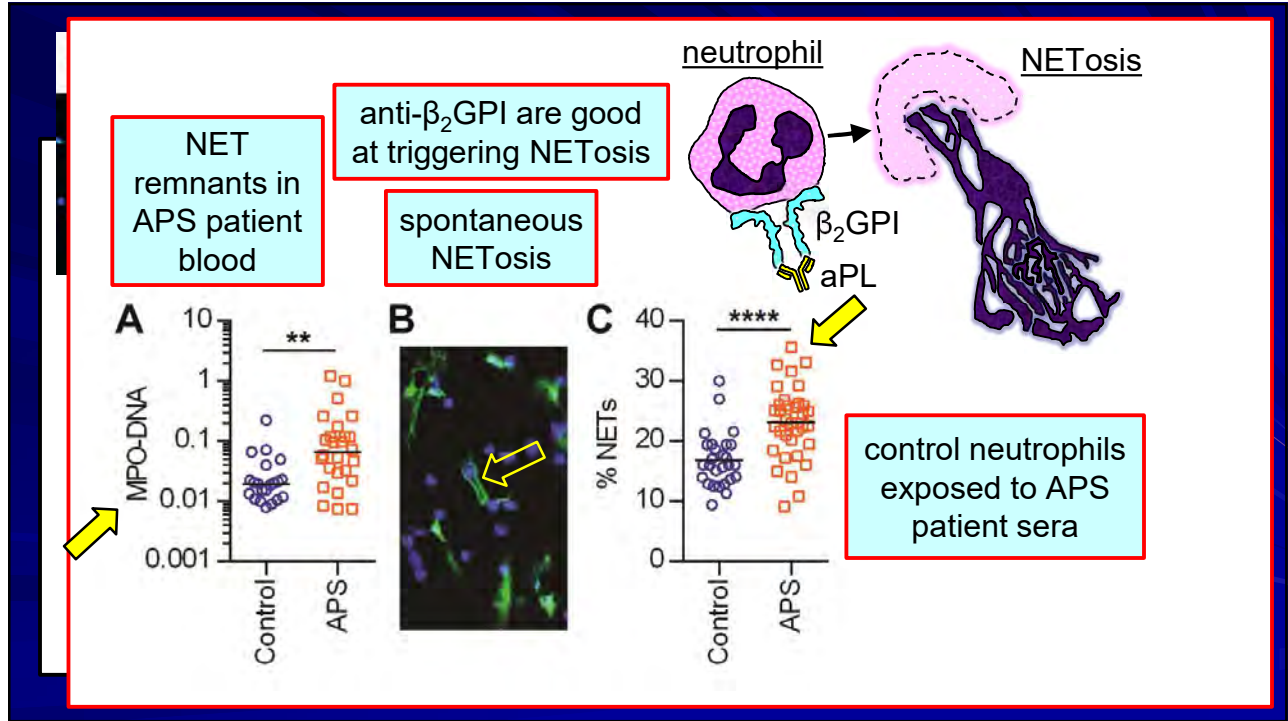

# With great power comes great responsibility

23

24

25

# APS IgG (human) accelerates venous thrombosis

Which can be blocked by neutrophil depletion

And by DNase, which dissolves NETs

DNA

NETs

And by disrupting adhesion to the endothelium (PSGL-1, Mac-1)

And by boosting intracellular cAMP (dipyridamole, defibrotide, ginger)

**APS thrombus**

26

## Outline

- Brief background including some history of APS
- Let's talk about neutrophils and NETs!
- APS pathogenesis—and what it can potentially teach us about COVID-19
- For fun: some ginger with that?

27

## More aspects of APS pathogenesis

Seminars in Immunopathology (2022) 44:347–362

28

# Could we “cure” APS by eliminating aPL?

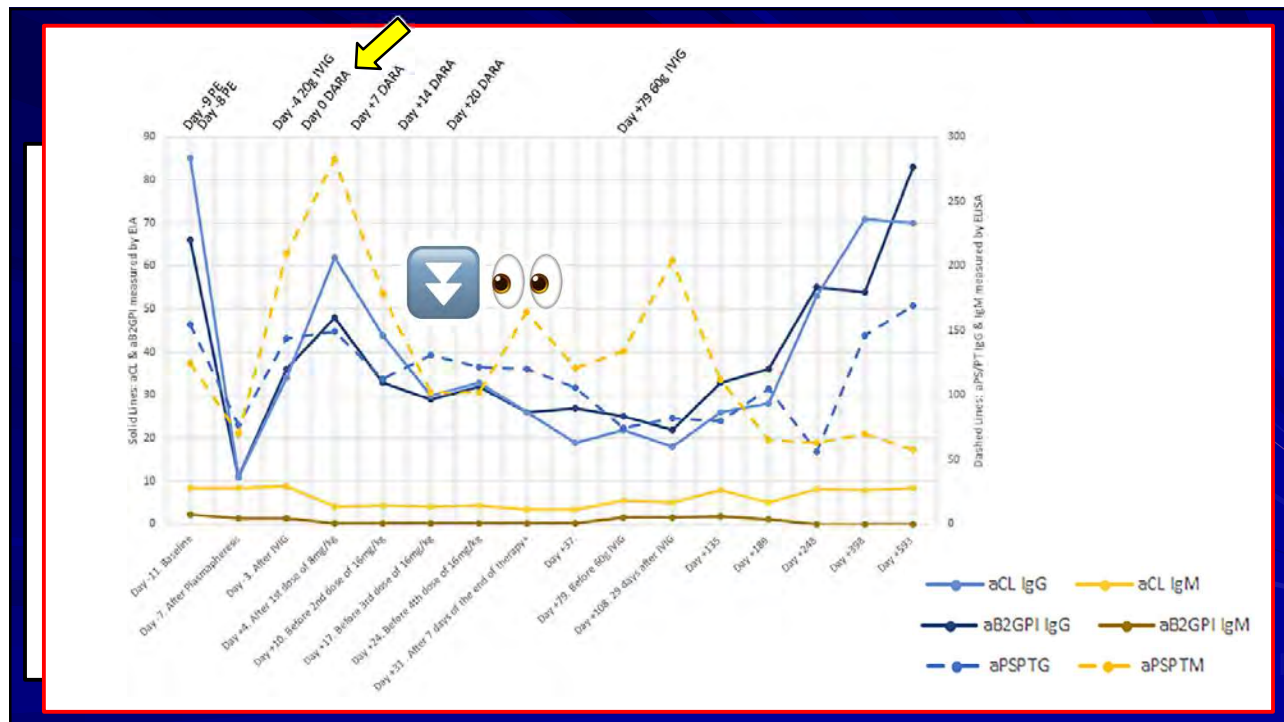

29

# Anti-CD38 for plasma cell depletion in APS?

The diagram shows a **Multiple Myeloma Cell** with a **CD38** receptor on its surface. A **DARZALEX<sup>®</sup>** antibody is shown binding to the CD38 receptor. The antibody is a Y-shaped molecule with a purple stem and teal arms. To the right, a photograph shows the **DARZALEX<sup>®</sup>** (daratumumab) injection packaging, including a box and a vial.

30

31

## Anti-CD38 for plasma cell depletion in APS?

APS | ACTION

dare - APS

- Targeting CD38 with Daratumumab in Primary APS: A Phase 1b Dose Escalation Safety Trial (**NCT05671757**)
- **Objective:** To assess the safety and tolerability of daratumumab in APS (via dose-escalation cohorts)
- **Objective:** To assess changes in aCL and aβ2GPI levels, and lupus anticoagulant (LA) test positivity

32

## Anti-neutrophil therapy? 🧠 🙄

- Depleting neutrophils = not a credible solution
- Lessons from other diseases? DNase in cystic fibrosis? Selectin inhibitors in sickle-cell crisis?
- Are there drugs we already use that have under-recognized anti-neutrophil properties?

33

## Adenosine, cAMP, and neutrophils

# What about a whole ginger extract?

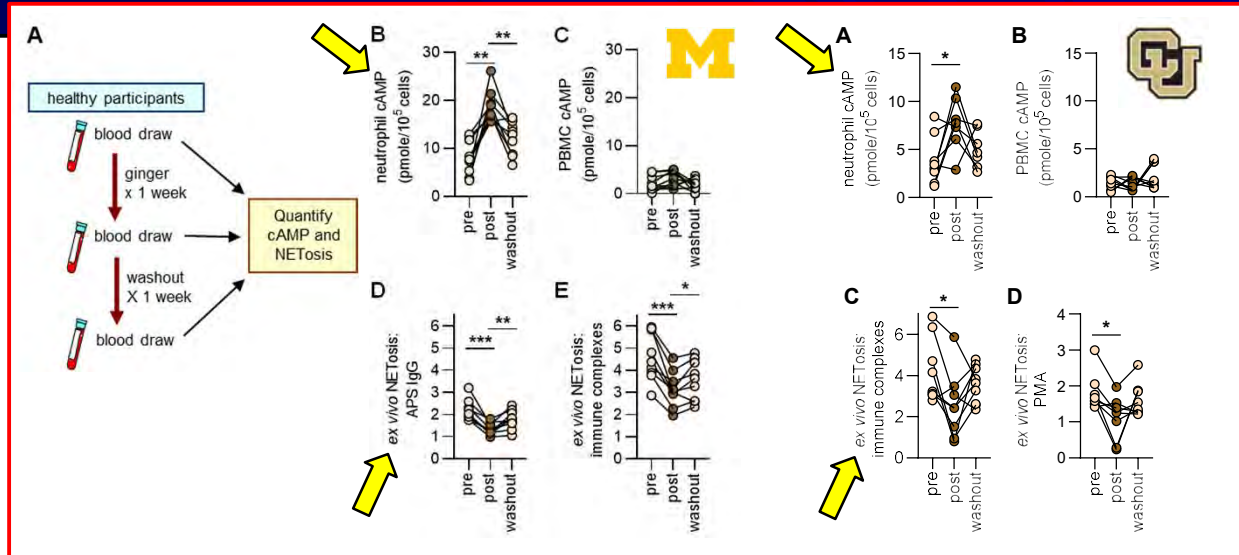

Reduction in APS IgG-mediated NETosis and thrombosis when mice are fed the ginger extract

Meeting: ACR Convergence 2022

58

## What about a whole ginger extract?

Meeting: ACR Convergence 2022

59

## Summary

- Brief background including some history of APS
- Let's talk about neutrophils and NETs!
- APS pathogenesis—and what it can potentially teach us about COVID-19
- For fun: some ginger with that?
