Pediatric Dentistry
3 Day Observerships

The University of Nebraska Medical Center Pediatric Dentistry Postgraduate Residency offers 3 day observerships for those interested in pursuing specialty training in Pediatric Dentistry. Eligible applicants include United States and Canadian dental students and licensed dentists who are graduates of C.O.D.A. accredited dental schools. Our residency program clinic, the University of Nebraska Medical Center Pediatric Dental Clinic, gives observers the opportunity to shadow pediatric dental residents working closely with our program faculty in the areas of pediatric dentistry, orthodontics, pediatric oral surgery, and sedation. Typically, observers spend one day in the operating room with our pediatric dental faculty and residents while they treat children and adolescents with extensive dental restorative needs, physical, intellectual, and developmental disabilities, cleft and craniofacial conditions, and complex medical conditions. Our clinic and hospital setting provides dental care to children from the Omaha metropolitan area, greater Nebraska, and our surrounding states. It would be our pleasure to show you our clinic within Children’s Hospital & Medical Center, introduce you to our program’s faculty and residents, and take advantage of this opportunity to get to know you better.
