

# Wait! Don't contaminate!

## Do not wear gloves outside of laboratory spaces!

- Use clean, bare hands for door handles, buttons, light switches, etc.

Avoid touching personal items until hands are bare and washed!

- Electronics
- Lip balm/cosmetics
- Earbuds/headphones
- Glasses
- Face and Hair
- Backpacks/purses

Material(s) on your gloves can transfer to personal items and vice versa. Keep yourself and your work safe from contamination!

A secondary container with a secure lid should be used for transporting materials outside of the lab!

Secondary containment will prevent accidents like this!

- One glove may be worn if needed for transporting material!
- If both gloves are needed, use a buddy with clean hands to escort you!
