

VisualDx: Your Trusted Image Atlas

VisualDx images represent the full spectrum of human disease across skin types, body location, morphologic variation, and other diagnostic features. To adequately capture the immense variation inherent in disease requires access to hundreds of specialized image collections that span general medicine. For this reason, VisualDx partners with exceptional learning institutions and individuals who have contributed their images toward this effort.

- World's best curated image library with 45,000 images
- Leading skin of color atlas with more than 14,000 images and 32,000 image captions
- All images and content go through a rigorous clinical review process
- VisualDx goes beyond skin images to include lab, x-ray, ECG, radiograph, CT scan, etc.
- Filter images to see different skin types, body locations, level of severity, and image type
- Engage with patients and build confidence in their diagnosis by sharing images and patient handouts at the point of care

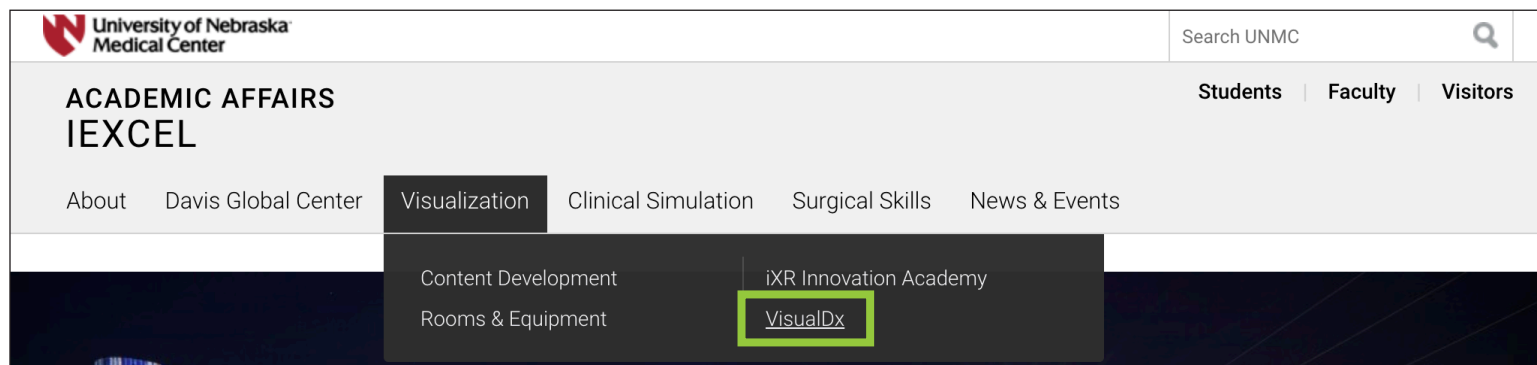

IMAGE VARIETY IN VISUALDX

	Clinical Images 45,000+		Skin of Color Images 14,000+
