

# Emergent Use Artesunate and Miltefosine

## Available for Immediate Transfer 24/7 from Nebraska Medical Center

- Therapeutics for Severe Malaria and Free-living Amoeba are not stocked at most hospitals or local pharmacy distributors due to cost and infrequent utilization.
- When these therapies are needed for clinical emergencies, local supply to initiate therapy is now available for immediate transfer.

**Call the Nebraska Poison Center at 402-955-5555 at any time (24 hours a day, seven days a week) for further instructions on initiating a transfer.**

## Details

- Supply for immediate transfer is limited and intended to facilitate rapid initiation of therapy, allowing time for follow-up doses to be sourced through regular pharmacy distribution channels.
- Nebraska Poison Center can provide the most up-to-date instructions for initiating the transfer – please use only the number above to be connected directly to them as a starting point.
- It is the responsibility of the requesting institution to provide/arrange courier transport from Nebraska Medical Center.
- Therapy will be billed to the requesting institution at current WAC pricing, without markup. This is a clinical service being provided to providers and patients in our region, not to generate profit.
