Welcome to UNMC’s Internal Medicine Residency Program!

Welcome to Omaha! Thank you for your interest in our program! We hope your interview experience with us shows how special our program is for residency training. We believe we work with some of the best and most well-rounded residents and faculty in the country. We pride ourselves on training strong general internists, while also preparing them to excel in subspecialty, primary care, or hospitalist medicine. We think it’s important to find a training setting that will help you develop as a clinician, but also allow you to build long-lasting relationships with your peers and explore your community. We hope you enjoy your visit and please consider joining us for this important next step in your career.

Sincerely, the 2019-2020 Chief Residents

Midtown Clinic

Midtown Clinic is considered by residents to be one of the best and most unique features of residency at UNMC. Midtown Clinic is a resident-run, certified patient centered medical home built in the heart of Omaha’s Blackstone District. Residents practice ambulatory medicine in an interprofessional, team-based setting that offers great socioeconomic patient diversity with on-site resources including a pharmacist, social worker, nurse case managers, and a licensed mental health professional. Our resident-directed clinic allows residents to claim true autonomy over their patient panel and provides strong preparation for the real-world ambulatory setting.

Additionally, residents are the voting members of the clinic Board of Directors (led by the Ambulatory Chief Resident), guiding the administrative and clinical direction of the clinic. These unique aspects contribute to a sense of resident ownership in the clinic and make us proud to call Midtown Clinic our ambulatory home for continuity of care.

98% Board Pass Rate for the Past 15 Years!
