There have been several studies that investigated using Wikipedia in the classroom in academics and academic health sciences. Murray's article investigated using Wikipedia as a platform to teach evidence-based medicine to first-year medical students. For one semester, instructors used Wikipedia as a knowledge tool for students to review entries, search for resources, identify knowledge gaps in the article, and make any necessary edits **{Murray, 2020 #231}** **[Murray, 2020]**. At the University of Hawaii at Manoa, health sciences librarians used Wikipedia as a resource to promote health literacy by having medical students edit specific health topics' Wikipedia articles **[Kahili-Heede, 2022]**.
