Outreach Clinics

Outreach Clinics

Our geneticists, genetic counselors and behavioral psychologists travel to three outreach clinics in the state.

These clinics are equipped to handle multiple referral types including:

- A suspected genetic disorder or syndrome
- A child with development delays with a suspected exposure during pregnancy
- Multiple family members with the same genetic condition
- Abnormal genetic test results (i.e. chromosome analysis, microarray or another specific genetic test)
- Developmental delay
- Autism
- Multiple congenital anomalies
- Hereditary cancer
- Preconceptual counseling

Outreach clinics are held four times a year in Scottsbluff, North Platte and Kearney NE.
