The Future of Nursing… Will You Be Ready to Lead?

The profession of nursing is on the move and major educational shifts are on the horizon. Doctorally prepared nurses will be essential members of interdisciplinary teams who provide leadership in the discovery, clarification, and refinement of nursing knowledge and practice.

UNMC College of Nursing will host Open Houses in Omaha and Lincoln for nurses interested in learning about what the national changes mean and what earning a PhD (Doctor of Philosophy) or DNP (Doctor of Nursing Practice) degree is all about. In addition we will discuss:

- How to select the right degree—PhD or DNP?
- How to finance your degree
- How to juggle life as a student

If you’ve thought about a doctoral program, this event is a great first step to gather information and get your questions answered.

You are invited to attend an Open House

**Lincoln Division**

You Are Invited!

**Date:** Wednesday September 26

**Time:** 4—6 pm CT

PhD nurse scientists are a critical link in the discovery and translation of knowledge generated by nurses and other health scientists. A sustainable supply of and support for nurse scientists is needed. (IOM, 2010)

DNP nurses are clinical scholars who translate research, shape systems of care, potentiate individual care into care needed to serve populations, and ask the clinical questions that influence organizational-level research to improve performance. (IOM, 2010)
