Collaboration and Proactive Teamwork Used to Reduce

Quarterly Collaborative Call #36 August 11th, 2020 2:00 – 2:30 p.m. CDT

Getting Back to Basics: Linking Bedside Interventions to Patient Risk Factors

AGENDA

- 1. Housekeeping
- 2. Linking Bedside Interventions to Patient Risk Factors

Housekeeping

- 1. Event Reporting
 - Quarterly data reports (Q2 2020) were sent mid-July 2020 to hospitals that reported at least one fall in Know Falls in 2020.
 - Reporting of all falls is encouraged—including outpatient, ER, ambulatory care, LTC, etc.
 - Contact Anne at <u>askinner@unmc.edu</u> with REDCap issues (add users, password resets) and special report requests.

Housekeeping #2

- 2. Edits on the horizon to fall documentation forms and Know Falls
 - Fall event reporting, post-fall huddle, system learning forms
 - Goal: streamline your process (i.e. shorten the forms); share draft with you for further feedback <u>before</u> implementing changes
 - Contact Anne if you have suggested edits. <u>askinner@unmc.edu</u>

Housekeeping #3

- 3. Look for new additions to the CAPTURE Falls website this fall!
 - New roadmap and tool inventory sections
 - Goal: streamline content to match key activities for your fall risk reduction program, link to additional education and tools from other fall toolkits and relevant content
 - Contact Vicki victoria.kennel@unmc.edu with:
 - Feedback and ideas for improvement
 - Tools, resources, success stories you would like to share on our website
 - <u>https://www.unmc.edu/patient-</u> <u>safety/capturefalls/index.html</u>

Interventions for Fall Risk and Fall Injury Risk Reduction What's on the Menu? A LOT!

- Assistive devices/equipment
- Bed/chair alarms
- Bed in low position
- Bedside floor mats
- Call light in reach
- Declutter environment
- Delirium prevention or mitigation
- Documentation of mobility/ADL assistance
- Floor clean and dry

- Gait belt
- Handoff tool

- Handrails in bathroom, hallway, etc.
- Hearing aids
- Hip protectors
- Lighting
- Locked wheels on bed, wheelchair
- Medication review by pharmacy
- Nonslip footwear

Interventions for Fall Risk and Fall Injury Risk Reduction What's on the Menu? A LOT!

- Orthostatic blood pressure checks
- OT evaluation
- Pain management
- Patient close to nurses' station
- Patient/family education
- PT evaluation
- Purposeful hourly rounding

- Seating assessment
- Sitter
- Supervised mobility and ADLs
- Supervised toileting
- Top bedrails up
- Video monitoring
- Visible identification of risk
- Vision correction

Interventions for Fall Risk and Fall Injury Risk Reduction – What to Do?

Throw everything but the kitchen sink at the patient? (No!)

Be more selective in your choices of interventions? (Yes!)

Are there times we want to do the same thing for <u>every</u> patient? Yes!

- <u>Universal Interventions</u>: common sense interventions for <u>every</u> patient <u>all the time</u>, <u>regardless</u> of risk status
- Rationale: ANYONE can fall, given the right circumstances
- Can also reduce risk for visitors and staff
- Focus largely on the physical environment, but also on how patients and staff interact

Common Universal Interventions

- Bed in low position
- Call light and personal belongings within reach
- Declutter environment
- Floor clean and dry
- Handrails in bathroom, hallways, etc.
- Locked wheels on hospital bed and wheelchair
- Night lights/supplemental lighting
- Nonslip, well-fitting footwear
- Patient/family education
- Purposeful hourly rounding
- Top bedrails up

Cognitive or Emotional Impairments

Difficulty with Mobility or Activities of Daily Living (ADLs)

Risk of Injury

Sensory Impairment

Toileting Needs

- Bed and/or chair alarm
- Delirium prevention or mitigation
- Medication review by pharmacy
- Patient/family education
- Patient placed close to nurses' station
- Purposeful hourly rounding
- Sitter
- Supervised mobility and/or activities of daily living
- Supervised toileting
- Video monitoring

- Assistive devices/equipment
- Documentation of mobility/ADL assistance
- Gait/transfer belt
- Medication review by pharmacy
- Nonslip, well-fitting footwear
- Occupational therapy evaluation
- Pain management
- Patient/family education
- Physical therapy evaluation
- Seating assessment
- Supervised mobility and/or ADLs
- Supervised toileting

Difficulty with Mobility or

Activities of Daily Living (ADLs)

- Medication review by pharmacy
- Orthostatic blood pressure monitoring

- Bed in low position
- Bedside floor mats
- Hip protectors
- Medication review by pharmacy
- Supervised toileting

CO Sensory Impairment

- Patient/family education
- Hearing aids
- Interventions to address difficulty with mobility or activities of daily living
- Night lights/supplemental lighting
- Occupational therapy evaluation
- Physical therapy evaluation
- Vision correction

- Assistive devices/equipment
- Call light and personal belongings within reach
- Interventions to address difficulty with mobility or activities of daily living
- Medication review by pharmacy
- Occupational therapy evaluation
- Physical therapy evaluation
- Purposeful hourly rounding
- Supervised toileting

Other common (and commonsense) interventions for patients identified at risk for falls:

- Visual identification (e.g. bracelet, signage, sock color)
- Handoff tool to use between staff

What does the research say about the efficacy of our interventions for hospitalized patients?

- Mostly inconclusive and/or weak evidence for several:
 - Exercise
 - Medication review
 - ID bracelets
 - Low beds

- Patient education
- Sitters
- Rounding
- Non-slip socks
- Multifactorial interventions (evidence stronger for subacute vs. acute)
- Cameron ID, Dyer SM, Panagoda CE, Murray GR, Hill KD, Cumming RG, Kerse N. Interventions for preventing falls in older people in care facilities and hospitals. Cochrane Database of Systematic Reviews 2018, Issue 9. Art. No.: CD005465. <u>https://www.cochranelibrary.com/cdsr/doi/10.1002/14651858.CD005465.pub4/epdf/full</u>
- LeLaurin JH, Shorr RI. Preventing Falls in Hospitalized Patients: State of the Science. *Clin Geriatr Med.* 2019;35(2):273-283.

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6446937/pdf/nihms-1519397.pdf

Why is the research inconclusive and/or weak for so many of our interventions for hospitalized patients?

- Quality of study design (randomized controlled trials vs. quality improvement case reports)
- Ethics of control groups
- Confounding variables (patient factors, staff factors, organizational factors, etc.)

LeLaurin JH, Shorr RI. Preventing Falls in Hospitalized Patients: State of the Science. *Clin Geriatr Med.* 2019;35(2):273-283. <u>https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6446937/pdf/nihms-1519397.pdf</u>

Should we stop these interventions in the absence of strong research? Not necessarily....

Keep an eye out for new strong evidence that something doesn't work (or is even harmful). Be willing to change!

Remember that **Evidence-Based Practice** includes the integration of

- the best available evidence
- clinical expertise
- and patient values and preferences

to support decisions related to patient and policy decision-making.

Patient Values and Preferences

Collaborative Member Sharing and Discussion

- 1. What are you currently doing to link interventions to patient risk factors?
- 2. What is working well?
- 3. Are there things you have tried that didn't work well? What did you learn?

Assistance is an email away!

- Contact us for more information about:
 - Fall risk reduction best practices: Dawn (<u>dvenema@unmc.edu</u>)
 - KNOW Falls and organizational learning (RedCAP): Anne (<u>askinner@unmc.edu</u>)
 - Team performance, implementation challenges: Vicki (victoria.kennel@unmc.edu)
 - General questions or not sure?: <u>CAPTURE.Falls@unmc.edu</u>

REMINDERS

- 1. Future Collaborative Calls/Educational Opportunities:
 - October 27, 2020; 2:00-2:30pm CST
 - Topic TBA
- 2. Looking for fall risk reduction resources? Click here: <u>https://www.unmc.edu/patient-safety/capturefalls/index.html</u> Still can't find what you are looking for? Let us know what we are missing!
