CAPTURE Falls
Collaboration and Proactive Teamwork Used to Reduce

http://www.unmc.edu/patient-safety/capturefalls/
Objectives

1. Identify best-practices in conducting post-fall huddles that facilitate immediate learning by front-line workers

2. Identify key challenges to conducting effective post-fall huddles and how to overcome these barriers to team learning

3. Learn and practice effective leadership and facilitation behaviors for post-fall huddles in particular and debriefs in general
What is a Post-Fall Huddle?

A post-fall huddle is a brief meeting immediately after a fall that includes staff caring for the patient and (ideally) the patient and family.

Useful to multiple stakeholders:

– Patient and family

– Core team
  • Nursing
  • PT/OT
  • Pharmacy
  • Quality Improvement
  • Providers

– Administration/Management
Purpose of a Post-Fall Huddle

To guide critical thinking about a fall event for an individual patient with the overt goal of discovering the root cause of the fall

To decrease the risk of a future fall for the patient who has fallen by changing the plan of care for that particular patient

To apply what is learned in the huddle to other patients and the system in general, especially when trends emerge over time
Secondary Purpose of a Post-Fall Huddle

To improve teamwork and cohesion among bedside personnel (core team) in the hospital

To improve collaboration and coordination among inter-professional teams in the hospital
What do we know about post-fall huddles?

2014 survey of post-fall huddle behaviors in 15 Nebraska CAHs assessed perceptions of...

- Huddle attendee behaviors
- Huddle leader behaviors
- Satisfaction with huddles
- Effectiveness of huddles
What do we know about post-fall huddles?

Opportunities to create a safe post-fall huddle environment where staff can be open and honest, share information, accept responsibility, recognize successes and learn from mistakes.

</tbody>
</table>

Improving the success of post-fall huddles:
- Enhance huddle attendee and leader behaviors
- Greater satisfaction with and effectiveness of huddles
- Greater perceptions of group and organizational safety norms
What makes for a successful huddle?

Several steps and inputs to consider:

1. What is the purpose...fill out a form or draw out the story of what happened?
2. Who to include?
3. When to hold the huddle?
4. Where to hold the huddle?
5. Who facilitates the huddle?
6. What huddle form to use?
7. How to manage attendee behavior?
8. How to manage leader/facilitator behavior?
Who to include?

Consider inviting the following:

• Staff providing direct care for the patient at the bedside (RN, CNA)
• Interprofessional Team (pharmacy, PT/OT, MD, QI, SW)
• Patient/family

Careful not to overwhelm patient/family with team...

“...it’s good for patients and families to know that we’re watching over the patient and are [including them] either to get some feedback or provide some feedback so – that’s kind of where we’ve thought our value is.”
The Interprofessional Necessity

- Multiple points of contact with patient
- Multiple perspectives about etiology and prevention
- Multiple potential root causes

Interprofessional huddles have best chance to capture all of these!

“We all just bring a little different tool or element to problem solving that makes it collectively a better way to solve the problem”
A Two-Stage Huddle Option

Consider a two-stage huddle process to achieve the goal of interprofessional input:

**Core Team (1):** Bedside huddle that occurs immediately

**Coordinating Team (2):** Members of inter-professional team (e.g. pharmacist, PT, OT, QI) review fall event report and huddle form within 24 hours

- Provide complementary input to nursing
- Review the event in the context of the system and previous events

“[there is ] a couple different levels of huddle too, what can we do right now to stop it from happening again, and ... is there a process issue.”
When to hold the huddle?

• Bedside huddle should occur immediately
  • Must occur before end of shift

• Interprofessional team huddle ideally within 24 hours

• Time is our enemy
  • Forget important details in a matter of minutes/hours...

“...it is too difficult to get all of the people involved back together after the shift is over.”
Where to hold the huddle?

• Ideal = where the fall occurred with the patient/family

• Necessary = a space large enough for the huddle team to openly discuss the event

• A space more similar to where the event occurred ensures better recall of circumstance of the event
  • e.g. another open hospital room similar to patient’s room
Who facilitates the huddle?

• Several options, for example:
  • Nurse assigned the patient
  • Lead/charge nurse
  • Doctor
  • Fall risk reduction team member

Key: Have a person responsible for leading the huddle and completing necessary documentation!
Why is a facilitator essential?

- Ensures accountability for
  - calling and conducting the huddle
  - completing documentation
  - implementing agreed upon changes in plan of care
- Ensures all aspects of event reviewed
- Elicits and clarifies multiple versions of story
- Prevents negative attendee behaviors (e.g. blame)
- Facilitates positive attendee behaviors (e.g. open sharing environment)
What huddle form to use?

What is a post-fall huddle form?

Why “yet another” form is helpful?

Our proposed post-fall huddle form...
If we knew what it was we were doing, it would not be called a huddle would it?

Albert Einstein
German Theoretical-Physicist
(1879-1955)
1. WHO?

2. What type of fall occurred? CHECK ONE
   - Accidental fall due to environment
   - Anticipated physiological fall due to known risk factors
   - Unanticipated physiological fall due to unpredictable factors
   - Unsure: _______________________

Decision Tree for Types of Falls

Tuesday, April 22, 2014

Immediate Causes
- E.g., Spill on floor
- Trip over tubing
- Broken equipment or furniture
- Unknown sudden condition that cannot be predicted before the first occurrence

Environmental

Known Intrinsic/Extrinsic Risk Factors
- E.g., Postural hypotension
- Weak or impaired gait
- Loss of balance
- Confusion
- Centrally acting medication
- Heart Attack
- Seizure
- Drop Attack

Anticipated Physiological Fall

Unanticipated Physiological Fall

Accidental Fall

Determine Preventability

Post Fall Huddle

Determine Immediate Cause

What was different this time?

## Learning Domains

<table>
<thead>
<tr>
<th>Process Uncertainty</th>
<th>Actor Interdependence</th>
<th>Low</th>
<th>High</th>
</tr>
</thead>
</table>
| **Low**             | **Low**               | Task Execution: Individuals perform well understood, routine tasks  
                    |                       | **Coordination**: Process knowledge high within groups; low between groups  
                    |                       | **Coordination Error Example**: Information about previous fall not handed off between shifts/departments  
                    |                       | Task Error Example: Forget to turn on bed alarm  
| **High**            | **Judgment**          | Judgment: Individuals perform unfamiliar processes that require decision making  
                    |                       | **System Interaction**: Multiple people involved in new activity  
                    |                       | **System Error Example**: No policy/ procedure to regularly replace batteries in newly acquired chair alarms  
                    |                       | Judgment Error Example: Patient at high fall risk and cognitively impaired left alone in bathroom  

Cautions on Huddle Forms

Don’t get stuck in the checklist

– Probe an issue until the root cause is identified by asking “Why?” multiple times

– Goal is to achieve a “rich” understanding of the situation based on multiple perspectives

Build in flexibility

– Accommodate unexpected variations

– Don’t be afraid of ambiguity
Managing Huddle Attendee Behavior

Engage in Positive Behavior

• Open and honest sharing
• Supportive discussion
• Acknowledge good work
• Praise successes
• Accept responsibility
• Identify things to work on

STOP Negative Behavior

• Blaming
• Finger pointing
• Overtly critical comments
Huddle Leader Behavior

Engage in positive facilitator techniques
  – Allow/encourage EVERYONE to speak
  – Ensure concerns are voiced
  – Discuss each attendee’s role during and in response to the fall
  – Discuss what can be learned from the fall
  – Agree on processes to be improved in the future
  – Give praise/commend for good work
What does a bad huddle look like?

Two major issues (among others)

1. Blaming and critical comments

2. Unmanaged challenging/negative personality
Role-play – “Bad” Huddle
What does a good huddle look like?

Three major keys to a successfully managed huddle (among others):

1. Open, safe sharing environment (i.e. turn taking)

2. Thoughtful and focused on processes (i.e. no automatic reacting)

3. Learning occurs and is identified
Role-play – “Good” Huddle
Call to Action/Conclusion

“I think all [huddles] are effective in one way or another—you know you learn something from every one…”
Next Steps

1. Natural Experiment

2. CAH Fall Event Reporting and Benchmarking Program

We Pay For Performance!
