Goals and Objectives for the Neonatal-Perinatal Medicine Fellow  
PGY-6  
Developmental /NICU Follow-Up Clinic Rotation

Contact: Dr. Howard Needleman, hneedelm@unmc.edu

Notify Dr. Needleman – Currently in 2020-21 – all follow-up clinics are virtual.

During the final year of fellowship, Neonatal-Perinatal Medicine fellows will routinely attending our NICU follow-up clinic held on Monday Afternoons through Children’s Hospital and Medical Center. Each fellow should attend a total of at least 20 clinics throughout their final year. Additional options for clinic times include Monday morning through Monroe-Meyer Institute. The fellow will start by observing the visits and evaluations. Over the course of the clinic time, the fellow will become more hands on with the evaluation and running the visits to allow the attending to observe. If in person visits return, the fellow will attend several in person appointments and for evaluation with Bailey Testing and physical therapy testing.

**Goal:** Learn the neonatologist’s role in the post-discharge follow-up care of the high-risk infant.

**Objectives:**

1. Describe common conditions and diagnoses which result in referral for post-discharge follow-up care.
2. Under supervision, evaluate and manage the care of infants referred to the Follow-Up Clinic.
3. Describe the use and limitations of the common evaluation tools used in post-discharge follow-up care.
4. Coordinate the ongoing care of medical complications related to neonatal intensive care with the primary care provider.
5. Identify developmental complications commonly seen in the NICU graduate and arrange for appropriate intervention services.
