

GET THE FACTS.

BREAKTHROUGH INFECTIONS

Most people who get seriously ill from COVID-19 are not up-to-date on their vaccines.

Being up-to-date means getting both doses of a two-shot vaccine, and then getting any booster shots you are eligible for.

VACCINES PROTECT AGAINST SERIOUS ILLNESS.

Even when breakthrough infections happen, the vaccine still protects almost all vaccinated people from becoming seriously ill or dying.

COVID-19 VACCINES ARE SAFE.

The vaccine has been proven safe in hundreds of millions of people of different races, ethnicities, and ages. While mild side effects are normal, serious side effects from the vaccine are extremely rare and most people who have them get better.

COVID-19 vaccines work very well.

The best way to protect yourself, your family, and your community is to stay up-to-date with your COVID-19 vaccines.

If you are not up-to-date, you are much more likely to get infected with COVID-19, get dangerously ill or die, and spread it to others.

YOU CAN PREVENT BREAKTHROUGH INFECTIONS

Even if you are up-to-date on your vaccines, you and your family will be safest if you wear a mask.

Practicing social distancing, avoiding gatherings with many people, and washing your hands frequently are other ways to keep yourself and others safe.

PROTECT YOURSELF. PROTECT YOUR COMMUNITY. GET VACCINATED.
