Thesis:

- **The significance of Women Cadres' mobilization in increasing rate of hospital delivery in rural areas of Sichuan province**

Abstract: A main reason of high maternal mortality and morbidity in rural areas of Sichuan province is low rate of hospital delivery. This article explored the significance of women cadres' mobilization in increasing rate of hospital delivery and proposed several suggestions to policy makers in relevant areas.

- **A survey of hygiene of main parks in Chengdu**

Abstract: parks play a significant role in providing people in cities leisure, amusement and body-building functions. This article chooses 5 main parks in Chengdu city as subjects, and then by questionnaire survey, it adopts the method of mathematical and statistical analyzing to study their environmental and hygienic conditions. The result reveals that 5 main parks in Chengdu city receive good scores through this survey. This article, finally, also proposes several

optimization measures to relevant institutions.

- **Occupational Health Hazard in Dentists (Review)**

Abstract: Even though the clinic condition of dentistry has acquired a great improvement, there are still a large number of health problems threatening the health of dentists, such as: infection, musculoskeletal disorders, expose to noise, dental biomaterial and stress. The article reviewed the research progress of the occupational health problems of dentists.
