NOTICES

Notice of Termination of Selected Research Training and Research Career Development Award Funding Opportunity Announcements

New

NOT-OD-10-069

National Institutes of Health (NIH)

This notice terminates the Institutional Research Training and Institutional Research Career Development Programs listed below because they provide application instructions for paper submissions using the PHS 398 forms. (For due dates on or after January 25, 2010, all applications submitted for Institutional Research Training and Career Development Programs must be submitted electronically through Grants.gov using the SF 424 (R&R) forms; NOT-OD-10-008).

The Funding Opportunity Announcements will be reissued with updated application instructions.

PAR-06-449 Paul Calabresi Career Development Award For Clinical Oncology (K12)

PAR-08-197 Neurological Sciences Academic Development Award (NSADA) (K12)

PAR-09-083 The NEI Mentored Clinical Scientist Development Program Award (K12)

PAR-08-054 Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Predoctoral Training Program in Systems Biology of Developmental Biology & Birth Defects(T32)

PAR-08-271 NICHDs Institutional Predoctoral and Postdoctoral Training Program in Reproductive, Obstetric, Perinatal and Pediatric Epidemiology and Pharmacoepidemiology (T32)

PAR-09-049 Postdoctoral Research Training for Obstetricians and Gynecologists (T32)

PAR-08-118 Minority Access to Research Careers (MARC) Ancillary Training Activities (T36)

PAR-08-200 Planning Grants for International Malaria Clinical, Operational and Health Services Research Training Programs (D71)

PAR-08-154 Global Infectious Disease Research Training Program Award (D43)

PAR-08-175 Millennium Promise Awards: Non-communicable Chronic Diseases Research Training Program (NCoD) (D43)

Amount:

Department of Defense Autism Research Program

U.S. Army Medical Research

The FY09 ARP encourages proposals that specifically address critical needs of the Autism Spectrum Disorders (ASD) community in the following areas (Revised for FY09):

- Co-morbidity: (e.g., manifestations such as disorders [gastrointestinal, sleep, behavioral, speech/language], psychiatric, seizures, immune dysfunction, motor and sensory deficits, metabolic dysfunction, and effects of ASD on intellectual ability)

- Predictors for Treatment Outcomes: Identification of biomarkers, clinical characteristics, or other phenotypic markers that predict outcomes of a treatment, or populations that will or will not respond to a treatment (traditional or complementary and alternative)

FY09 ARP program announcements and application instructions for the following award mechanisms are anticipated to be posted and available on Grants.gov in February 2009.

Amount: \$750,000

Recovery Act: Notice on the Proper Management of Recovery Act Spending to Promote Job Creation and Increase the Pace of Scientific Research; and Policy Limiting Second No-Cost Extensions to Recovery Act Grants

NOT-OD-10-067

National Institutes of Health (NIH)

American Reinvestment and Recovery Act of 2009 (ARRA)

The purposes of this Guide Notice are to: 1) reaffirm to NIH grantees that the primary goals of all NIH Recovery Act awards are to create U.S. jobs and increase the tempo of biomedical research; 2) remind Project Directors/Principal Investigators (PD/PIs) and grantee institutions that NIH fully expects Recovery Act grantees to expend funds in a timely and expeditious manner in accordance with the expected pace of research; 3) remind grantees that all Recovery Act expenditures remain subject to terms and conditions on the Notice of Award, including the NIH-HHS Standard Terms and Conditions for ARRA Awards (<http://grants.nih.gov/grants/guide/notice-files/NOT-OD-09-120.html>) and all referenced regulations and OMB Circulars; and 4) notify grantees that NIH expects all grant activities are to be completed consistent with the schedule of the approved project period. While the NIH Terms of Award provide for extending the final budget period of a project period for up to twelve months to allow for completion of the planned project; prior approval requests for additional extensions will only be considered in very limited circumstances.

Recovery Act: Reminders on Annual Reporting Requirements and Notice of Revised Financial Closeout Requirements for ARRA-funded Administrative Supplements and Competitive Revisions

NOT-OD-10-066

National Institutes of Health (NIH)

American Reinvestment and Recovery Act of 2009 (ARRA)

The purposes of this Guide Notice are to: 1) remind NIH grantees that information on ARRA-funded Administrative Supplements and Competitive Revisions must be included in the annual progress report of the parent grant; 2) remind grantees on the special reporting requirements for administrative supplements providing summer experiences for students and science educators; and 3) inform grantees of revised financial closeout requirements when multiple ARRA-funded Administrative Supplements and/or Competitive Revisions are awarded to the same parent award.

Amount:

Recovery Act: Update on ARRA Quarterly Reporting Requirements for Non-Competing Continuation Awards and Relinquished Projects; and Guidance to Avoid Common Errors

NOT-OD-10-065

National Institutes of Health (NIH)

American Reinvestment and Recovery Act of 2009 (ARRA)

The purposes of this Guide Notice are to: 1) provide ARRA quarterly reporting guidance for NIH non-competing continuation awards; 2) provide guidance on reporting requirements for relinquished/transferred ARRA grants; and 3) help grantees avoid some common errors identified in previous reporting periods.

To increase transparency for the public on how ARRA funds are used, NIH and its grantees are required to separately award, track, monitor, account for, report on, audit and close out ARRA funding. All awards funded by ARRA require quarterly reporting through www.FederalReporting.gov in accordance with Section 1512 of the Act. This is in addition to the annual scientific progress reports submitted on the PHS 2590 and required financial reports submitted for most NIH grants. More information on the ARRA quarterly reporting requirements, including the NIH Data Dictionary and NIH Readiness Tool, can be found on the NIH Recovery Act Recipient Reporting web page available at http://grants.nih.gov/recovery/recipient_reporting.html.

Instructions for Completion and Peer Review of the Vertebrate Animal Section (VAS) in NIH Grant Applications and Cooperative Agreements

NOT-OD-10-027

National Institutes of Health (NIH)

This Notice is to clarify the information that must be included in the Vertebrate Animal Section (VAS) of grant applications and cooperative agreements (subsequently referred to as applications) that use live vertebrate animals in research. It also explains how the VAS is evaluated as part of the NIH peer review process and is considered as part of the overall scoring. Distinction is made between the oversight role of the Institutional Animal Care and Use Committee (IACUC) and review responsibility of the NIH Scientific Review Group (SRG).

Amount:

LOI:

Deadline: Release Date March 17, 2010

HIV/AIDS Funds for Competitive Revision Applications (R01, R03, R15, R21, R21/R33, R37) for HIV/AIDS-related Research through the NIH Basic Behavioral and Social Science Opportunity Network

NOT-OD-10-036

National Institutes of Health (NIH)

The National Institutes of Health (NIH) announces the opportunity for investigators and institutions/organizations with relevant active NIH-supported research project grants (R01, R03, R15, R21, R21/33, and R37) to submit competitive revision applications (formerly termed competitive supplements) to accelerate, expand, and/or strengthen basic behavioral and social sciences research (b-BSSR) relevant to HIV/AIDS risk, prevention, disease progression, and treatment. Competitive revision applications should support a significant expansion of the scope or research protocol approved and funded for the "parent" award on which the revision application is based.

Amount: \$150,000

LOI: April 7, 2010

Deadline: May 7, 2010

To learn more: <http://grants.nih.gov/grants/guide/notice-files/NOT-OD-10-036.html>

Key Words: **Behavioral and Social Processes; Interactions between Biology, Behavior, and Social Processes; Methodology and Measurement in the Behavioral and Social Sciences**

NINDS Administrative Supplements for Collaborative Activities to Promote Translational Research (CAPTR)

NOT-NS-10-008

National Institute of Neurological Disorders and Stroke (NINDS)

The National Institute of Neurological Disorders and Stroke (NINDS) announces the availability of one-year administrative supplements for NINDS-funded grantees to stimulate new interdisciplinary collaborations in translational research. The proposed studies must be within the scope of the peer-reviewed activities specified within the NINDS parent award and collaborators may not have a significant history of joint interactions.

Amount: \$50,000

LOI: Before submitting an application for a collaborative administrative supplement, all grantees should communicate with their Program Director(s) to discuss the planned application.

Deadline: April 26, 2010

To learn more: <http://grants.nih.gov/grants/guide/notice-files/NOT-NS-10-008.html>

Key Words: **Neurological Disorders**

Notice of Intent to Publish Funding Opportunity Announcements for Countermeasures Against Chemical Threats (CounterACT) Cooperative Research Projects (U01) and Research Centers of Excellence (U54)

NOT-NS-10-011

National Institute of Neurological Disorders and Stroke (NINDS)

The National Institute of Neurological Disorders and Stroke (NINDS) intends to issue two Funding Opportunity Announcements (FOAs) in the spring of 2010: "Countermeasures Against Chemical Threats (CounterACT) Research Centers of Excellence (U54)" and "Countermeasures Against Chemical Threats (CounterACT) Cooperative Research Projects (U01)". The goal of both initiatives is to provide support for translational research to develop therapeutics for reducing mortality and morbidity caused by acute exposures to chemical threat agents. Chemical threats are toxic chemicals that could be used in a terrorist attack or accidentally released from industrial production, storage or shipping. The scope of the research supported within this milestone-driven translational program includes target and candidate identification and characterization, through candidate optimization and demonstration of in vivo efficacy, through Investigational New Drug (IND) submission and clinical trials when appropriate. See www.ninds.nih.gov/counteract for a description of the CounterACT program.

The CounterACT research program will utilize Research Centers of Excellence (U54) and Cooperative Research Projects (U01) to support up to 5 years of translational research. Chemical threats to be covered include pulmonary agents (e.g. chlorine, phosgene), toxic industrial chemicals (e.g. cyanide, pesticides), chemical nerve agents (e.g. sarin, VX), and others. The NIH intends to commit approximately \$12 million per year in Fiscal Years 2011, 2012, and 2013 to fund new and/or competing renewal U01 and U54 awards. Because the nature and scope of the proposed research will vary from application to application, it is anticipated that the size and duration of each award will also vary. The total amount awarded and the number of awards will depend on the number, quality, duration, and costs of the applications received. It is anticipated that several other NIH Institutes, including the National Eye Institute (NEI), National Institute of Allergy and Infectious Diseases (NIAID), National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), National Institute of Environmental Health Sciences (NIEHS), and the National Institute of General Medical Sciences (NIGMS), may also participate in this funding opportunity announcement.

NINDS Announces Availability of Funds for Competitive Revision Applications for Grand Challenge on Optimal Cortical Control of DARPA Revolutionizing Upper-Limb Prosthetics (R01 and R37)

NOT-NS-10-013

National Institute of Neurological Disorders and Stroke (NINDS)

The purpose of this notice is to encourage requests for competitive revisions to research projects currently funded by NIH R01 and R37 grant mechanisms, appropriate for support on research and development for a Grand Challenge on achieving optimal electrocorticography (ECoG) based cortical control of the Revolutionizing Upper-limb Prosthetics 2009 developed by the U.S. Defense Advanced Research Projects Agency (DARPA). The Grand Challenge will be to achieve reaching and grasping of objects by the DARPA Arms in a subject's natural work space, by obtaining maximum cortical control that can be realized on the highly anthropomorphic prosthetic arm and hand.

Notice of Availability of Administrative Supplements for Roadmap Assay Development for HTS Awards (National Institute for Neurological Disorders & Stroke)

NOT-NS-10-012

National Institute of Neurological Disorders and Stroke (NINDS)

For 2010, administrative supplements will be provided to NINDS-relevant projects funded in the Roadmap Molecular Libraries Assay Development for HTS Program. Investigators successfully submitting new, HTS-ready projects from this Program to the MLPCN, via the "Fast Track direct entry" process described in the RM-08-024 announcement (<http://grants.nih.gov/grants/guide/rfa-files/RFA-RM-08-024.html>), can request a supplement of up to \$50,000 (total cost) from NINDS.

Request for Information (RFI): To Solicit Input for the National Institute of General Medical Sciences (NIGMS) Strategic Plan for Training and Career Development

NOT-GM-10-102

National Institute of General Medical Sciences (NIGMS)

This is a time-sensitive Request for Information (RFI) directed at obtaining input, electronically through a Web site and at a series of regional meetings and a webinar, to assist the National Institute of General Medical Sciences (NIGMS) in developing its strategic plan for research training and career development.

To assure the broadest possible input, NIGMS is inviting university and college faculty members, university and college administrators, current and former predoctoral and postdoctoral trainees, industry representatives, scientific organizations, and other interested parties to respond to a series of questions.

Amount:

LOI: N/R

Deadline: April 21, 2010

To learn more: <http://grants.nih.gov/grants/guide/notice-files/NOT-GM-10-102.html>

Key Words: **Research Productivity, Training Programs, Quality Measures**

NIGMS Administrative Supplements for Collaborative Science

NOT-GM-08-130

National Institute of General Medical Sciences (NIGMS)

The National Institute of General Medical Sciences (NIGMS) announces the availability of funds for administrative supplements to NIGMS-funded research projects. These funds are intended to enhance ongoing research by stimulating and supporting new multidisciplinary collaborations among NIGMS grantees and other members of the scientific community. Collaborations that bring together ideas and approaches from disparate scientific disciplines are particularly encouraged, as are those involving individuals from groups that are currently underrepresented in the biomedical sciences. These collaborative activities must be within the scope of the approved aims of the parent award, and are expected to provide novel scientific approaches to the research plan for the NIGMS grantee and collaborators.

Amount: \$135,000

LOI: N/R

Deadline: June 15, 2010; December 15, 2010; March 15, 2011; June 15, 2011.

Notice of Intent to Publish Request for Applications for Rheumatic Diseases Research Core Centers (P30)

NOT-AR-10-027

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

The National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS) intends to issue a Request for Applications (RFA) to solicit applications for Rheumatic Diseases Research Core Centers (P30). A goal of these Core Centers is to provide resources for a number of investigators with established, funded research projects, often from different disciplines, to adopt a synergistic approach to common research problems in rheumatic diseases and to ensure greater productivity than from each of the separate projects.

This notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive proposals. The RFA is expected to be published in early 2010 with an expected receipt date of late summer, 2010.

Notice of Intent to Publish a Request for Applications on New Strategies for Growing 3D Tissues (R01/R21)

NOT-HL-11-105

National Heart, Lung, and Blood Institute (NHLBI)

The National Heart, Lung, and Blood Institute (NHLBI) intends to promote a new initiative by publishing a Request for Applications (RFA) to solicit applications to improve our understanding of how cells respond to their environment and develop accurate assays and methods to understand how angiogenesis and organogenesis may instruct the creation of 3D engineered cellular aggregates. This program is expected to develop new technologies by tissue engineers who effectively collaborate with scientists with relevant expertise in developmental and cell biology, systems biology, chemistry, physics and organ physiology. The overall purpose of this program is to support highly integrated multidisciplinary scientific teams to advance the field beyond the more basic levels of structural and functional complexity and learn how to use the signals and microenvironments which direct normal angiogenesis and organogenesis in developing vertebrates. These advances will be aimed towards addressing our knowledge gaps in tissue repair and regeneration. Institutes expected to participate in the RFA include the NHLBI, the National Institute of Biomedical Imaging and Bioengineering (NIBIB), and the National Institute for Arthritis and Musculoskeletal and Skin Diseases (NIAMS).

This Notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive projects. The RFA is expected to be published in May 2010 with an application receipt date in September 2010.

Modification: This Notice modifies RFA-RM-09-019

NOT-RM-10-004

National Center for Research Resources (NCRR)

The purpose of this Notice is to modify the language of RFA-RM-09-019 with regard to research subject advocacy in the Regulatory Knowledge and Support section and with regard to literature cited in the Format of the Application.

In RFA-RM-09-019 Regulatory Knowledge and Support language currently states:

Each CTSA should name an individual independent of the IRB or compliance officer to act as a sounding board for potential research participants, serve as an advocate for research participants, and work with investigators, trainees and research teams to ensure that the highest priority is given for human subject protections.

This is now modified to read:

Each CTSA should provide research participant protections through research subject advocacy functions that should be independent from the IRB function, to be complementary and integrative with existing entities at the institution and work with investigators, trainees and research teams to promote and facilitate safe and ethical conduct of human research. See announcement for further modifications.

Notice of Intent to Publish a Funding Opportunity for the Reissue of RFA-TW-08-002 the International Research Ethics Education and Curriculum Development Award (R25)

NOT-TW-10-326

Fogarty International Center (FIC)

The John E. Fogarty International Center (FIC) intends to issue a Funding Opportunity Announcement (FOA) that is a reissue of RFA-TW-08-002 to encourage applications for the International Research Ethics Education and Curriculum Development Award (R25)

This notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive proposals. This FOA is expected to be published in early April 2010 with an anticipated receipt date of early June 2010. The FOA will utilize the NIH Research Education (R25) grant mechanism. Details of the planned FOA are provided below.

Purpose

This FOA issued by the Fogarty International Center at the National Institutes of Health requests Research Education Grant (R25) applications from institutions/organizations that propose to develop masters level curricula and provide educational opportunities for developing country academics, researchers and health professionals in ethics related to performing research involving human subjects in international resource poor settings.

UPDATE TO RFA-AE-10-001: OS Recovery Act Limited Competition: Accelerating Adoption of Comparative Effectiveness Research Results by Providers and Patients (R18) - Announcing Additional Funds Availability and Clarifying Eligible Institutions/Organizations

NOT-AE-10-001

Department of Health and Human Services (DHHS)

American Reinvestment and Recovery Act of 2009 (ARRA)

In January, 2010, ASPE announced the availability of funds under the American Recovery and Reinvestment Act of 2009 (ARRA) for strategies for accelerating the adoption of comparative effectiveness research (CER) results by providers and patients (RFA-AE-10-001). Since then, additional funds have been made available for this RFA in order to allow for the funding of 1 to 3 additional meritorious proposals, thus broadening the impact of this critical component of the CER enterprise. These additional funds will lead to a greater understanding of "best practices" for the adoption of CER by both providers and patients. In addition, ASPE is clarifying additional eligible institution/organization characteristics.

This Notice serves to notify potential applicants of the following changes or clarifications related to the Funds Available and Eligible Institutions/Organizations:

Funds Available and Anticipated Number of Awards. Using funds provided by the Office of the Secretary of the Department of Health and Human Services, ASPE now intends to commit \$17,000,000 for use under this FOA. We anticipate that 6 to 10 awards will be made for fiscal year 2010, pending the number and quality of applications and availability of funds.

Eligible Institutions/Organizations. Eligible institutions or organizations with the following characteristics may include the following:

Integrated health care systems

Integrated provider systems

Academic Medical Centers

Provider consortia

Community Health Center Networks

Private payers

Other non-governmental organizations that administer or directly provide health care services

Organizations that serve health care consumers

University-based school (e.g. School of Public Policy or Public Health)

Private research institutes

Change in Application Receipt Date for AHRQ Funding Opportunity Announcement (FOA) RFA-HS-10-018

NOT-HS-10-015

Agency for Healthcare Research and Quality (AHRQ)

This Notice is to inform the scientific community that AHRQ is extending the application due date for AHRQ Funding Opportunity Announcements (FOA), RFA-HS-10-018, Improving Patient Safety through Simulation Research (R18), (see <http://grants.nih.gov/grants/guide/rfa-files/RFA-HS-10-018.html>). The NEW application due date for this FOA is June 21, 2010 and expiration of the FOA will be on June 22, 2010. Thus, NEW Key and Submission, Review, and Anticipated Start Dates are:

Key Dates and Submission, Review, and Anticipated Start Dates

Release/Posted Date: January 21, 2010

NOTE: On-time submission requires that applications be successfully submitted to Grants.gov no later than 5:00 p.m. local time (of the applicant institution/organization).

Application Due Date(s): June 21, 2010

Peer Review Date(s): Generally four months after receipt date

Earliest Anticipated Start Date(s): Generally four months after peer review date

Expiration Date: June 22, 2010

The Role of Cellular Organelles in Alcohol-Induced Tissue Injury (R01) and (R21)

New

PA-10-085 and PA-10-086

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose to study biological processes involving the cellular organelles in alcohol-induced tissue injury. Excessive alcohol consumption can damage many organ systems including the liver, heart, pancreas, brain, and lung. However, the mechanisms for these injuries are currently not fully understood. Cellular organelles play an important role in cellular functions and are significantly involved in alcohol-induced tissue injury. Thus, studies of alcohol's effects on the structure and function of cellular organelles are critical to better understand the mechanisms of alcohol-induced injuries and to develop new strategies for their diagnosis and treatment. The purpose of this FOA is to: (1) better understand how acute or chronic alcohol consumption affects the structure and function of cellular organelles, and in turn, how these changes contribute to alcohol-induced injury; (2) investigate how variations of proteins in cellular organelles, or their regulation and function, including cellular signaling pathways, contribute to an individual's response to acute or chronic alcohol intake and alcohol-induced tissue injury; (3) develop potential biomarkers for prognosis and diagnosis of tissue injury, or identify new targets for therapeutic interventions. This FOA aims to foster the utilization of innovative experimental design and emerging technologies, such as genomics, proteomics, metabolomics, bioinformatics, as well as novel microscopic imaging techniques that illuminate functions in intact cells and tissues, to generate new mechanistic and clinical insights into alcohol-induced tissue injuries.

Stress Pathways in Alcohol Induced Organ Injury and Protection (R01) and (R21)

New

PA-10-093 and PA-10-094

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose studying the role of cellular stress responses, the cytoplasmic classical stress response or heat shock response (HSR) and the endoplasmic reticulum (ER) stress, in alcohol-induced tissue injury and tissue protection. While excessive alcohol use causes organ damage, moderate alcohol consumption may be beneficial. The underlying molecular mechanisms for this apparent dichotomy of alcohol's harmful and salutary effects are currently not fully understood. Alcohol induces cellular stress pathways in the cytoplasm and in the endoplasmic reticulum that may significantly be involved in alcohol-induced tissue injury or mediate tissue protection depending on the quantity, frequency, duration, and temporal pattern of drinking. Hence, studies of the effects of alcohol on cellular stress pathways are critical to understand the mechanisms of alcohol-induced injuries or protection to develop new strategies for prevention, diagnosis and treatment. The purpose of this FOA is to: (1) acquire insight into how acute or chronic alcohol consumption affects cellular stress pathways and in turn, how these changes contribute to alcohol-induced injury/protection; (2) investigate how alcohol induced stress responses mediate cell survival and death signaling pathways at macromolecular, organelle, cellular and organism level contributing to alcohol-induced tissue injury/protection; (3) develop potential stress related biomarkers for prognosis, diagnosis of tissue injury/protection, furthermore identify new targets for their therapeutic interventions. Utilizing innovative experimental design and emerging technologies, such as deep sequencing, genomics, proteomics, metabolomics, bioinformatics, and novel imaging techniques these investigations are expected to provide a more comprehensive understanding of how alcohol affects the evolutionally conserved stress pathways and elucidate their roles in tissue injuries and repair.

Collaborative R01s for Clinical and Services Studies of Mental Disorders, AIDS and Alcohol Use Disorders (R01)

PAR-09-153

NIH – Multiple Institutes

The National Institute of Mental Health (NIMH) and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) seek to support collaborative intervention trials in the treatment, prevention or rehabilitation of those with mental disorders and alcohol use disorders and comorbid mental disorders. Support is also provided for other collaborative clinical studies, including but not limited to mental health services research, AIDS, genetics, psychopathology, stigma, and cultural and social processes. This Funding Opportunity Announcement (FOA) should be used when two or more sites are needed to complete the study. Accordingly, the collaborating studies share a specific protocol across the sites and are organized as such in order to increase sample size, accelerate recruitment, or increase sample diversity and representation. In studies with a large number of sites, it is expected that one site will be submitted as a coordinating site for data management and/or other centralized administration. For a linked set of collaborative R01s, each site has its own Project Director/Principal Investigator and the program provides a mechanism for cross-site coordination, quality control, database management, statistical analysis, and reporting.

Genetic Epidemiology of Substance Use Disorders (R03)

PA-07-414

National Institutes of Health (NIH)

The National Institute on Drug Abuse (NIDA) and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) seek to stimulate and expand research applying genetic epidemiologic methods to studies of substance and alcohol use disorders (SUDs/AUD, drug or alcohol abuse and dependence). Previous studies using twin, adoption, and family approaches indicate that genetic factors substantially contribute to the vulnerability to SUDs/AUD. Shared environmental factors have also been shown strongly to influence risk, particularly for the onset of substance and alcohol use, while heritability estimates generally rise with age and with progression from substance use to disorder. Significant advances have been made in our understanding of the developmental nature of the onset and progression of SUDs/AUD and in defining a disinhibited phenotype. Building on these findings, new studies are needed to apply genetic epidemiologic approaches to advance our understanding of a variety of developmental trajectories of SUD/AUD; integrate as well as differentiate genetic, environmental, and developmental factors in the onset and maintenance of SUD/AUD; broaden and refine phenotypic definitions of SUDs/AUD; guide the translation of etiologic findings to treatment, prevention, gene-finding and molecular studies; and meet the methodologic challenges of the field.

Building System Capacity for Implementing Evidence-Based Practices in Substance Abuse Treatment and Prevention (R34)

PA-09-105

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Drug Abuse, National Institutes of Health, provides resources to facilitate research on the adoption, implementation, and sustainability of evidence-based clinical treatment practices, prevention approaches, and business practices in community-based service delivery settings. It is intended to foster collaboration between service providers and entities that directly influence their capacity to deliver such practices, including Single State Agencies, other funders, licensing and regulatory bodies, referral sources, educational entities, and other social services agencies that interact

with the treatment and prevention systems. Applications are encouraged that will advance the field of implementation science while simultaneously building the capacity of systems and service providers to conduct process improvement research. Applicants may propose to pilot test proven clinical or business practices across service delivery settings, or to study the downstream effect of changes in State or other system-level policies on program capacity to implement evidence-based practices. This FOA encourages collection of preliminary data needed to inform approaches to the eventual scaling-up of selected practices to broader, sustained implementation.

2010 NIDA Translational Avant-Garde Award for Medication Development for Diseases of Addiction (DP1)

RFA-DA-10-013

National Institute on Drug Abuse (NIDA)

The NIDA Translational Avant-Garde Award is designed to support dedicated and talented basic and/or clinical researchers with the vision, drive and expertise necessary to translate research discoveries into medications for the treatment of diseases of addiction. Through this funding FOA, the National Institute on Drug Abuse (NIDA) is committed to making significant advances in the development of safe and efficacious products for the treatment of disorders stemming from tobacco, cannabis, cocaine, methamphetamine, heroin, or prescription opiate use or abuse. These products can be pharmaceuticals (small molecules) or biologics. Biologics include medicinal products such as vaccines and recombinant therapeutic proteins created by biological processes. Applications may focus on the pharmacotherapy of one or various disorders. Applications may also focus on the specific symptoms of the disorder such as withdrawal, craving or relapse. Testing of new formulations of marketed medications that are available for other indications, or new combinations of existing medications, which may be promising candidates for the treatment of diseases of addiction is within the scope of this FOA. The 2010 Translational Avant-Garde Award competition will proceed in two phases. The first phase is a pre-application phase in response to PAR-10-095. Pre-applications will be evaluated by a group of external reviewers. Those investigators whose submissions are judged to be the most outstanding will be notified of the opportunity to submit full applications under this FOA (DP1).

Drug Abuse Epidemiology and Services Research in Cooperation with the Clinical and Translational Science Awards Consortium (R01)

PAS-09-001

National Institute on Drug Abuse (NIDA)

Through this program announcement with set aside (PAS), the National Institute on Drug Abuse (NIDA) invites applicants to develop innovative drug abuse epidemiology or health services research in cooperation with academic centers supported through the NIH Clinical and Translational Science Awards (CTSA) consortium. A major NIH initiative, the CTSA consortium is transforming how clinical and translational research is conducted, building an infrastructure for multidisciplinary researchers and clinicians to perform research and develop new treatments more efficiently. As a part of this infrastructure, CTSA sites have established partnerships with a range of clinical settings and have access to large, multi-generational population cohorts. These features of the CTSA sites offer a unique opportunity for researchers to integrate drug abuse epidemiology and health services research in these settings. Applicants are asked to propose innovative drug abuse research which builds upon the resources available at CTSA sites, resources which would include CTSA efforts to strengthen networks of clinical sites and to establish innovative information technologies, phenotyping systems, and biobanks. A broad range of drug abuse epidemiology and health services research areas will be supported under the auspices of this FOA.

Amount: \$2,500,000

LOI: N/R

Deadline: standard dates apply

Key Words: **Substance-Related disorders, Pharmacological Treatment, Behavioral Therapy, Neuroimaging, Infectious Disease Transmission**

Mechanism for Time-Sensitive Drug Abuse Research (R01)

PAR-10-072

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) is issued by the National Institute on Drug Abuse (NIDA), National Institutes of Health (NIH). The FOA is intended to support substance abuse prevention and treatment services research in rapidly evolving areas (e.g., changes in service systems, health care financing, policy, natural/man-made disasters, etc) where opportunities for empirical study are, by their very nature, only available through expedited review and award of support. There are three distinguishing features of an eligible study: 1) the study's scientific value and feasibility are clear, 2) rapid review and funding are required in order for the scientific question to be answered, and 3) the knowledge gained from the study is time-sensitive and seeking funding through the regular NIH cycle of review and award would result in a missed opportunity to conduct the research. It should be clear that the research question offers an uncommon and scientifically significant research opportunity that could only become available if the project is initiated with minimum delay.

Amount: varies

LOI: 4 weeks prior to planned submission date

Deadline: June 9, 2010, September 10, 2010 December 9, 2010, March 9, 2011, June 9, 2011, September 9, 2011, December 9, 2011, March 9, 2012, June 8, 2012, September 10, 2012, December 10, 2012

Support Opportunity for Addiction Research (SOAR) for New Investigators (R03)

RFA-DA-10-015

National Institute on Drug Abuse (NIAD)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

The National Institute on Alcohol Abuse and Alcoholism (NIAAA) and the National Institute on Drug Abuse (NIDA) are interested in receiving applications to supplement new investigators who have, or have a commitment of support to conduct research in basic or clinical alcohol or drug abuse research from funding sources other than NIH (e.g. private foundation). In addition, those applicants currently supported to conduct research on psychiatric disorders that are often found to be co-morbid with substance abuse, are also eligible to apply to SOAR for the purpose of adding a substance or alcohol abuse research component to their on-going research. It is hoped that the SOAR program will facilitate ongoing supported substance abuse and co-morbidity research among entry-level new investigators. This Funding Opportunity Announcement (FOA) is intended to support new investigators' on-going basic or clinical alcohol, drug abuse and/or related co-morbidity research. The primary goal of this Support Opportunity for Addiction Research (SOAR) is for new investigators to leverage existing research programs in order to strengthen, possibly expand, and/or further develop alcohol, drug abuse, and co-morbidity research.

Amount: \$50,000

LOI: March 16, 2010

Senior Scientist Research and Mentorship Award (K05)

PA-09-076

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute on Drug Abuse (NIDA)

The Senior Scientist Research and Mentorship Award (K05) is intended to provide outstanding senior scientists protected time to focus on and enhance their research and to carry out mentoring of new investigators. Candidates for the Senior Scientist Research and Mentorship Award (K05) should be recognized leaders in the alcohol, or drug abuse, or related research fields who have demonstrated a sustained, high level of productivity and a distinguished record of original contributions in their field, and whose expertise and contributions to these research fields will continue to be critical to the missions of the NIAAA or NIDA. Each candidate must demonstrate both the need for protected time to further their field of research and a commitment to serve as a mentor to new investigators or junior faculty who are currently performing or will begin to perform alcohol, or drug abuse, or related research. Mentored investigators should have an independent, full-time appointment at their institution; this can be in either non-tenure or tenure-track positions.

Amount: up to \$450,000

Research on Alcohol and HIV/AIDS (R01), (R03) and (R21)

PA-10-103 and PA-10-104 and PA-10-105

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) is intended to appeal to a broad audience of alcohol and HIV/AIDS researchers, including alcohol researchers with no prior experience in HIV/AIDS research, but with a keen appreciation for the relationship between problem drinking and HIV/AIDS and a strong interest in acquiring such experience; HIV/AIDS researchers with no prior alcohol research experience who realize the importance of more intensive alcohol interventions to improving clinical outcomes among HIV+ individuals; and those with prior research experience in the area of co-occurring HIV/AIDS and alcohol and other substance abuse. The primary objectives for this announcement are to increase research : 1) to characterize the relative importance of reducing alcohol misuse in the prevention of acquisition and transmission of HIV in order to identify and apply appropriate alcohol and HIV interventions as public health measures, 2) to more fully understand and prevent the progression of HIV disease in the presence of continued alcohol exposure and 3) to develop operational research frameworks for addressing the occurrence and persistence of infections in high-risk populations (e.g. minority women, young gay men, etc.), and translate findings these targeted populations. Given the breadth of research objectives included in this announcement, potential applicants are encouraged to carefully review all sections of the announcement for research opportunities.

NIH Small Research Grant Program (Parent R03)

PA-09-163

National Human Genome Research Institute (NHGRI)

National Institute on Drug Abuse (NIDA)

National Institute on Aging (NIA)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute of Allergy and Infectious Diseases (NIAID)

National In

The National Institutes of Health (NIH) Investigator-Initiated Small Grant (R03) funding opportunity supports small research projects that can be carried out in a short period of time with limited resources. Investigator-initiated research, also known as unsolicited research, is

research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. All investigator-initiated small grant applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests.

Testing Tobacco Products Promoted to Reduce Harm (R01) and (R21)

PA-09-046 and PA-09-047

National Cancer Institute (NCI)

National Institute on Drug Abuse (NIDA)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute on Drug Abuse (NIDA), invites applications that propose multidisciplinary research on potential reduced-exposure tobacco products, both smoked and smokeless. The multidisciplinary studies can span basic, biological, behavioral, surveillance, and epidemiology research. The tobacco industry is currently promoting several new products with claims that they: a) are less either harmful or less addictive; and b) purportedly deliver lower amounts of toxic, carcinogenic, and/or addictive agents to the user compared with conventional products. However, to date, the scientific evidence is insufficient to evaluate whether these new products actually reduce the users' exposure or risk for tobacco-related diseases. The overarching goal of this FOA is to determine whether potential reduced-exposure tobacco products provide a truly, less-harmful alternative to conventional tobacco products, both at the individual and population level.

PAR-09-016

National Institute of Biomedical Imaging and Engineering

National Institute on Aging

National Institute of Arthritis and Musculoskeletal and Skin Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute

This FOA is issued by the National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health. This FOA is a follow up of a previous Roadmap RFA (RM-04-021 "Innovation in Molecular Imaging Probes"). The purpose of this initiative is to encourage the development of novel molecular imaging approaches that can detect and image specific molecular activities in vivo, and have the potential for clinical applications. Novel molecular imaging approaches developed through this initiative can focus on one (or both) of the following long-term translational goals: (1) imaging the characteristic markers, and function, of normal cells in control human subjects and patients, and (2) imaging the characteristic markers, and biochemical or physiological abnormalities, of disease cells in patients. Potential abnormalities that could provide early markers for disease include (but are not restricted to): inflammation, fibrosis, immune cell activation, altered signal transduction pathways, altered gene expression pathways, and altered post-translational modification of proteins. This initiative solicits applications that explore innovative "high-impact" approaches, rather than incremental technology development that is already supported by current NIH programs.

Quick-Trials for Imaging and Image-Guided Interventions: Exploratory Grants (R21)

PAR-08-147

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA) is intended to support clinical trials conducting preliminary evaluation of the safety and efficacy of imaging agents, as well as an assessment of imaging systems, image processing, image-guided therapy, contrast kinetic modeling, and 3-D reconstruction and other quantitative tools. The rapid translation of promising discoveries in the fields of imaging probes, methodologies, technologies and image-guided therapies to clinical practice requires timely support. This FOA will provide investigators with support for either pilot (Phase I and II) cancer clinical trials, or patient monitoring and laboratory studies. The imaging and Image-guided Intervention (IGI) studies, if proven successful in these early clinical trials, can then be validated in larger studies through competitive R01 mechanisms, or through clinical trials in the Specialized Programs of Research Excellence (SPOREs), Cancer Centers and/or Cooperative Groups.

Amount: \$250,000

LOI: N/R

Deadline: April 9, 2010; August 11, 2010; December 10, 2010; April 11, 2011

Key Words: **Imaging Agents, Contrast Modeling, Probes**

Image-guided Drug Delivery in Cancer (R01)

PA-09-253

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), encourages innovative translational research in the development of quantitative in vivo imaging characterization of image-guided drug delivery (IGDD) in cancer, including characterizations of the target, delivery validation, and therapy response. This FOA will support research in development of integrated imaging-based platforms for multifunctional and multiplexed drug delivery systems in cancer. Validation studies in non-human primates or large animal models and first in human studies directed towards translation of IGDD technology into the clinic will be considered appropriate for this FOA.

Amount: \$2,500,000

LOI: N/R

Deadline: Standard dates apply

To learn more: <http://grants.nih.gov/grants/guide/pa-files/PA-09-253.html>

Key Words: **IGDD, Image-Guided Drug Delivery, cancer**

Radiochemistry and Radionuclide Imaging Instrumentation Research

DE-FOA-0000265

Department of Energy (DOE)

The Radiochemistry and Radionuclide Imaging Instrumentation Research program within BER, supports fundamental research for developing new methodologies for real-time, high-resolution imaging of dynamic biological processes in living systems. This research has two integrated goals: First, the research supports the DOE Science mission-related activities in bioenergy and bioremediation; Second, the fundamental methodologies developed under DOE-funded research may serve as tools leading to transformational new technologies for use in nuclear medicine research and applications supported by NIH and industry.

Amount: \$400,000

LOI: N/R

Deadline: April 19, 2010

To learn more: <http://www.grants.gov/search/search.do?&mode=VIEW&flag2006=false&oppld=51470>

Basic Research for Combating Weapons of Mass Destruction (C-WMD)

HDTRA1-08-10-BRCWMD-BAA

Department Of Defense (DOD)

Defense Threat Reduction Agency

This BAA is focused on soliciting basic research projects that support the DTRA mission to safeguard America and its allies from WMD (e.g., chemical, biological, radiological, nuclear, and high yield explosives) by providing capabilities to reduce, eliminate, and counter the threat and mitigate its effects. To this end, DTRA seeks research across broad strategic thrust areas:

3. Science for Protection: Basic science for protection involves advancing knowledge to protect life and life-sustaining resources and networks. Protection includes threat containment, decontamination, threat filtering, and shielding of systems. The concept is generalized to include fundamental investigations that reduce consequences of WMD, assist in the restoration of life-sustaining functions, and support forensic science.

Amount: \$2,500,000

LOI: registration: March 31, 2010

Deadline: May 12, 2010

To learn more:

Key Words: **Forensic Science, Decontamination, Containment**

Prostate Cancer Research Program Impact Award

W81XWH-10-PCRP-IA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

This award will support research projects specifically focused on making a major impact on one critical issue in prostate cancer: Reducing or eliminating the over-treatment of primary prostate cancer. Projects funded by this award will, if successful, ultimately change the standard of practice for decision-making in the treatment of primary prostate cancer. Studies conducted under the Impact Award may involve the development of surveillance mechanisms, including improvements in current clinical and diagnostic tools to monitor prostate cancer patients. Proposed projects may include basic, translational, or clinical research, including clinical trials, provided the overall project is hypothesis-based and focused on the problem of prostate cancer over-treatment. Applications for the PCRP Impact Award should also address at least one of the following FY10 PCRP focus areas:

Biomarkers

Genetics

Imaging

Survivorship

Therapy

Tumor Biology

Amount: \$750,000

LOI: March 17, 2010

Bioinformatics

Secondary Analyses of Social and Behavioral Datasets in Aging (R03)

New

PA-10-139

National Institute on Aging (NIA)

This Funding Opportunity Announcement (FOA), issued by the National Institute on Aging (NIA), is seeking small grant (R03) applications to conduct secondary analysis of social and behavioral data in aging. Specifically, NIA seeks applicants to: 1) stimulate and facilitate secondary analysis of data related to dynamics of health and disability, cognition, psychosocial and sociodemographic factors, genetics, and biomarkers, long term care, caregiving, behavioral medicine, retirement, economic status; 2) provide support for preliminary projects using secondary analysis that could lead to subsequent applications for other research grant award mechanisms; 3) provide support for analyses of new databases and experimental modules for purposes such as informing the design and content of future study waves; and 4) provide support for pilot research on under-utilized databases.

Amount: \$100,000

LOI: N/R

Deadline: Standard dates apply

T32 Postdoctoral Research Fellowship

T32HL072757-02

University of Alabama at Birmingham (UAB)

The Section on Statistical Genetics in the Department of Biostatistics at the University of Alabama at Birmingham is accepting applications from statistical and other scientists for postdoctoral positions in statistical genetics, genetic epidemiology, microarray analysis, or proteomic analysis.

Amount: not specified

LOI: N/R

Deadline: Continuous. Fellowship positions are open until filled.

To learn more: <http://www.soph.uab.edu/ssg/default.aspx?id=68>

Key Words:

Methodology, Measurement, and Statistics (MMS)

NSF 08-561

NSF

The MMS Program seeks proposals that are methodologically innovative, grounded in theory, and have potential utility for multiple fields within the social, behavioral, and economic sciences. Successful proposals often integrate across the following areas: The development, application, and extension of formal models and methodology for social and behavioral research, including methods for improving measurement. The proposed research must have implications for one or more of the social and behavioral sciences. The development of formal models that cross traditional disciplinary boundaries, including research on statistical methodology or statistical modeling having direct implications for one or more of the social and behavioral sciences. Research on methodological aspects of new or existing procedures for data collection, including methodology for survey research, and research to evaluate or compare existing data bases and data collection procedures. The collection of unique databases with cross disciplinary implications, especially when paired with developments in measurement or methodology. The organizational infrastructure of social and behavioral research.

Amount: varies

LOI: N/R

Deadline: August 16, annually; January 16, annually

Exploratory Collaborations with National Centers for Biomedical Computing [(R21) PAR-08-183] and [(R01) PAR-08-184]

PAR-08-183 and PAR-08-184

NIH Roadmap Initiatives

This funding opportunity announcement (FOA) is for projects from individual-investigators or small groups to collaborate with the NIH Roadmap for Medical Research National Centers for Biomedical Computing (NCBCs). For a description of the NCBCs see <http://www.bisti.nih.gov/ncbc/>. The intention of the collaborating projects is to engage researchers across the nation in building an excellent biomedical computing environment, using the computational tools and biological and behavioral application drivers of the funded NCBCs as foundation stones. This FOA is intended to support exploratory biomedical informatics and computational biology research—applications should be innovative, with high risk/high impact in new areas that are lacking preliminary data or development. Applications for R21 awards should describe projects distinct from those supported through the traditional R01 mechanism. For example, long-term projects, or projects designed to increase knowledge in a well-established area will not be considered for R21 awards.

Amount: \$2,500,000

Predictive Multiscale Models of the Physiome in Health and Disease (R01)

PAR-08-023

National Institutes of Health (NIH)

The goal of this solicitation is to move the field of biomedical computational modeling forward through the development of more realistic and predictive models of health and disease. NIH recognizes the need for sophisticated, predictive, computational models of development and disease that encompass multiple biological scales. These models may be designed to uncover biological mechanisms or to make predictions about clinical outcome and may draw on a variety of data sources including relevant clinical data. Ultimately the models and the information derived from their use will enable researchers and clinicians to better understand, prevent, diagnose, and treat the diseases or aberrations in normal development. Specifically this program solicits the development of predictive multiscale models of health and disease states that must include higher scales of the physiome. The specific objectives are to develop multiscale models that are physiologically mechanistic and biomedically relevant, to bring together modeling and biomedical expertise to collaborate on building models, to validate and test models with standard datasets, and to develop models that can be explicitly shared with other modelers.

Amount: varies

LOI: Nonrequired letters of intent are due by April 14 and August 16, 2010

Deep Sequencing and Haplotype Profiling of Mental Disorders (Collaborative R01)

PAR-08-199

National Institute of Mental Health (NIMH)

With the initial stages of the Human Genome Project completed and new insights gained into the complex interplay of genomic function, genomic structure and the environment in mental disorders, attention is shifting towards the translational promise of the completed human sequence and a new era of genomic medicine in mental disorders. A special emphasis of this Funding Opportunity Announcement (FOA) issued by the National Institute of Mental Health (NIMH), National Institutes of Health (NIH), is to support applications that implement large-scale studies and innovative analytical designs that will disaggregate a given mental disorder into components of finite risks. These developments may be evolutionary or may be fundamentally new and may lead to paradigm shifts in the field. Applications submitted in response to this FOA may propose new technologies for cost effective whole genome analysis and in-depth sequencing and analysis of candidate genes and genomic regions in pedigrees or in a sample of unrelated cases with mental disorders. Applications for large-scale haplotype analysis and the development of new analytical methods also are encouraged.

Amount: varies

LOI: N/R

Deadline: standard application deadlines for the R01 funding mechanism are February 5, June 5, and October 5.

NEI Research Grant for Secondary Data Analysis (R21)

PAR-09-252

National Eye Institute (NEI)

This FOA issued by the National Eye Institute (NEI), National Institutes of Health (NIH), encourages Research Project Grant for Secondary Data Analysis (R21) applications from institutions/organizations that propose to conduct secondary data analyses utilizing existing database resources. Applications may be related to, but must be distinct from, the specific aims of the original data collection.

The NEI supports an extensive portfolio of clinical trials and large-scale epidemiologic research projects, wherein numerous data collection activities are required to meet each project's specific aims. The resultant wealth of data generated by these studies often provides unique, cost-effective opportunities to investigate additional research questions or develop new analytical approaches secondary to a project's originally intended purpose. Data are not limited to that collected under NEI support but these data are of highest programmatic interest. The R21 may be used to develop new statistical methodologies or to test hypotheses using existing data.

Development, Application, and Evaluation of Prediction Models for Cancer Risk and Prognosis (R01) and (R21)

PA-10-025 and PA-10-026

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), encourages research applications from clinicians, epidemiologists, geneticists, statisticians, and translational researchers working in the field of cancer control and prevention to improve existing models for cancer risk and prognosis by developing innovative research projects that use existing data; develop

new models for cancer risk and prognosis; and validate new models and evaluate their utility in research and clinic settings. To explore this opportunity, the NCI Division of Cancer Control and Population Sciences (DCCPS) and the Division of Cancer Treatment and Diagnosis (DCTD) encourage applications for research projects to develop, apply, and evaluate new and existing cancer risk and prognostic prediction models for use by researchers, clinicians, and the general public. This FOA is designed to provide a mechanism of support for investigators to address two major challenges in model development, which are: integrating diverse types of data (e.g., clinical, demographic, pathologic, environmental, epidemiologic, outcomes, and genetic data from varied data marts or warehouses); and ensuring adequate validation (i.e., using multiple separate populations to define sensitivity, specificity, and positive and negative predictive values).

Continued Development and Maintenance of Software (R01)

PAR-08-010

NIH, Multiple Institutes and Centers

Biomedical research laboratories increasingly undertake a software development project to solve a problem of interest specifically related to that laboratory. These software packages sometimes become useful to a much broader community of users that can include translational and clinical researchers. The goal of this program announcement is to support the continued development, maintenance, testing and evaluation of existing software. The proposed work should apply best practices and proven methods for software design, construction, and implementation to extend the applicability of existing biomedical informatics/computational biology software to a broader biomedical research community.

Amount: \$250,000

Lab to Marketplace: Tools for Brain and Behavioral Research (SBIR [R43/R44])

PA-08-071

NIH

The NIH Blueprint for Neuroscience Research is a framework to enhance cooperative activities among the NIH Office of the Director and 15 NIH Institutes and Centers that support research on the nervous system. This Funding Opportunity Announcement (FOA) is released in affiliation with the Neuroscience Blueprint, with Institutes and Centers participating independently, and with participation by Institutes and Centers that are not part of the Blueprint. This FOA encourages the translation of technologies for brain or behavioral research from academic and other non-small business research sectors to the marketplace. Solicited from Small Business Concerns (SBCs) are Small Business Innovation Research (SBIR) grant applications that propose to further develop, make more robust, and make more user-friendly such technologies in preparation for commercial dissemination. It is expected that this activity will require partnerships and close collaboration between the original developers of these technologies and SBCs, which may be accomplished in any of a number of ways, including the use of multiple principle investigators.

Amount: varies

LOI: N/R

Deadline: continuous, see listing

Key Words:

Correlative Studies with Specimens from Multi-Site Trials (R21) [PA-08-133] and (R01) [PA-08-134]

PA-08-133 and PA-08-134

NIH

This Funding Opportunity Announcement (FOA) is intended to support translational correlative studies that utilize annotated tumor and/or other biospecimens collected during large-scale multi-institutional clinical and/or prevention trials, respectively. The Cancer Therapy Evaluation Program (CTEP), the Cancer Diagnosis Program (CDP), and the Cancer Biomarkers Research Group (CBRG) of the NCI are cooperatively sponsoring this FOA with the overarching goal to facilitate predictions of responses to current interventions, and inspire future development of improved therapeutic and preventive strategies. Projects proposed in response to this FOA should address the correlations between intervention outcomes and cancer patients' disease characteristics determined at various cellular/molecular levels. For example, disease progression patterns may be correlated with tumor genotypic and/or phenotypic profiles (at the levels of the genome, epigenome, gene expression and/or protein and non-protein molecular markers. This FOA will only support studies that use tumor specimens linked to specific interventions/trials. To be able to achieve these translational goals, the proposed projects are expected to rely on interactions between basic researchers and clinical investigators, in order to improve future drug development and interventions.

Amount: Direct costs are limited to \$275,000 over an R21 2-year period, with no more than \$200,000 in direct costs allowed in any single year.

LOI: N/R

Deadline: Standard dates apply

Key Words:

Improvements to Biological Research Collections (BRC)

NSF 09-548

National Science Foundation (NSF)

Directorate for Biological Sciences

Division of Biological Infrastructure

The Improvements to Biological Research Collections Program provides funds for improvements to network, secure, and organize established natural history collections for sustained, accurate, and efficient accessibility of the collection to the biological research community.

The BRC program is encouraging collaborative proposals to network collections on regional and continental scales, especially collaborations that bring large and small collections together into networks. The BRC program also provides for enhancements to existing collections to improve collections, computerize specimen-related data, develop better methods of specimen curation and collection management through activities such as symposia and workshops.

Biological collections supported include those housing natural history specimens and jointly curated collections such as preserved tissues and other physical samples, e.g. DNA libraries and digital images. Such collections provide the materials necessary for research across broad areas of biological sciences.

Amount: \$500,000-\$2,000,000

LOI: N/R

Deadline: Fourth Friday in July, Annually

Living Stock Collections for Biological Research (LSCBR)

NSF 09-550

National Science Foundation (NSF)
Directorate for Biological Sciences
Division of Biological Infrastructure

The Living Stock Collections for Biological Research (LSCBR) program supports improvements in and partial operation of existing collections of living organisms (including viruses and bacteriophages) to be used in basic biological research. The program provides support for two types of projects. Short-term projects are one-time awards (up to 36 months) leading to innovative handling of living stocks or to well-defined improvements in existing collections, including those not otherwise supported by LSCBR. Longer-term projects (up to 60 months) help support ongoing operation of collections significant to the NSF research community. Collections receiving longer-term support are expected to receive significant support from user fees or other mechanisms of revenue generation.

Amount: varies

LOI: N/R

Deadline: July 7, 2010, July 6, 2011

Advancing Regulatory Science through Novel Research and Science-Based Technologies (U01)

RFA-RM-10-006

National Institutes of Health (NIH)

U.S. Food and Drug Administration (FDA)

This FOA, issued by the National Institutes of Health, encourages applications from institutions/organizations that propose to study the applicability of novel technologies and approaches towards the development and regulatory review of medical products (including drugs, biologics, and devices). This regulatory science initiative will foster the development, evaluation and availability of new or improved tools, methods, standards, and applied science that support a better understanding and improved evaluation of product safety, quality, effectiveness, and manufacturing throughout the product life cycle. This area of science has knowledge gaps that deserve special emphasis and would benefit from strategic coordination and planning by NIH and FDA. Advances in this area depend on the incorporation of cutting-edge science and evidence-based knowledge into regulatory decision making. Support through this FOA for regulatory science research will facilitate the translation of biomedical discoveries to improve prevention, treatment, and diagnosis of human health problems.

Amount: \$1,125,000

LOI: March 27, 2010

Deadline: April 27, 2010

SHIFT Award: Small Businesses Helping Investigators to Fuel the Translation of Scientific Discoveries [SBIR: R43/R44]

PA-10-122

National Institutes of Health (NIH)
multiple institutes

The primary objectives of the SHIFT SBIR initiative are: (1) to foster research that is translational in nature and (2) to transform academic scientific discoveries into commercial products and services. Academic researchers can be a driving force for new products and services in a small business concern (SBC). A major feature of the SHIFT program includes the requirement for an investigator who is primarily employed by a United States research institution at the time of application to transition to a small business concern (SBC) and be primarily employed (more than 50% time) by the SBC by or at the time of award. A SHIFT SBIR grant enables an SBC to increase both its scientific research staff and its core competencies. The Project Director/Principal Investigator (PD/PI) may also facilitate SBC licensing of intellectual property (IP) from the PD/PI's prior academic institutions, promote collaboration opportunities with academic investigators, and enable better access to academic resources.

Amount: up to \$2,250,000

LOI: N/R

Deadline: Standard dates apply

Predictive Multiscale Models of the Physiome in Health and Disease (R01)

PAR-08-023

National Institutes of Health (NIH)

The goal of this solicitation is to move the field of biomedical computational modeling forward through the development of more realistic and predictive models of health and disease. NIH recognizes the need for sophisticated, predictive, computational models of development and disease that encompass multiple biological scales. These models may be designed to uncover biological mechanisms or to make predictions about clinical outcome and may draw on a variety of data sources including relevant clinical data. Ultimately the models and the information derived from their use will enable researchers and clinicians to better understand, prevent, diagnose, and treat the diseases or aberrations in normal development. Specifically this program solicits the development of predictive multiscale models of health and disease states that must include higher scales of the physiome. The specific objectives are to develop multiscale models that are physiologically mechanistic and biomedically relevant, to bring together modeling and biomedical expertise to collaborate on building models, to validate and test models with standard datasets, and to develop models that can be explicitly shared with other modelers.

Amount: varies

LOI: Nonrequired letters of intent are due by April 14 and August 16, 2010

Deadline: May 14, and September 15, 2010.

NIDCD Research Core Centers (P30)

PAR-10-077

National Institute on Deafness and Other Communication Disorders (NIDCD)

The NIDCD P30 Core Center grant contains one or more research-serving cores, providing centralized resources and facilities for funded R01 research projects. Although no funds are provided for direct support of research projects, a P30 helps to integrate and promote research in existing funded projects, and may include multi-disciplinary and regional collaborations. A Core Center must be an identifiable organizational unit either within a single grantee institution or representing a consortium of cooperating institutions (e.g., geographic or web-based). The Center may serve as an intellectual hub to stimulate cooperative research, to increase the effectiveness, capabilities or productivity of current research, and/or to promote new research directions through collaborations. Individual research cores of the Core Center may provide for sharing technical expertise or centralizing labor-intensive tasks common among several investigators (PD/PIs); staffing, training and maintenance of shared equipment or resources, including tools or staffing to enhance activities such as recruitment databases for clinical projects; or problem-solving through innovative technical solutions using the most current methodologies. NIDCD P30 funds do not provide patient services, or support unfunded pilot studies, or facilitate research other than for funded user projects, unless directly related to advancing the potential of the Core Center itself. A P30 may provide benefits to other core centers or the larger community through sharing data or technology.

Amount: \$2,500,000

LOI: 30 days before application receipt dates

Deadline: June 1, 2010, October 1, 2010, February 1, 2011, June 1, 2011, September 30, 2011, February 1, 2012, June 1, 2012, October 1, 2012

NIH Small Research Grant Program (Parent R03)

PA-09-163

National Human Genome Research Institute (NHGRI)

National Institute on Drug Abuse (NIDA)

National Institute on Aging (NIA)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute of Allergy and Infectious Diseases (NIAID)

National In

The National Institutes of Health (NIH) Investigator-Initiated Small Grant (R03) funding opportunity supports small research projects that can be carried out in a short period of time with limited resources. Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. All investigator-initiated small grant applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests.

Amount: \$100,000

LOI: N/R

Deadline: Standard dates apply

New Technologies for Transient Molecular Complex Characterization (STTR [R41/R42])

PA-08-111

National Center for Research Resources

National Institute of Allergy and Infectious Diseases

National Institute of Environmental Health Sciences

National Institute of General Medical Sciences

This Funding Opportunity Announcement (FOA) encourages Small Business Innovation Research (SBIR) grant applications from small business concerns (SBCs) that propose to develop new technologies, tools, and/or processes for the study of transient molecular complexes. Depending on the complex, such studies should have the potential for characterizing normal function or disease dysfunction and the effects of potential therapeutic interventions. Awards will be used to create new technologies, tools, and/or processes that will help to study transient molecular complexes that are an integral part of normal cell physiology or that play a role in disease processes. Structural (stoichiometry, localization, symmetry, and overall shape) and kinetic characterization of these short-lived complexes will provide insight leading to a better understanding of normal processes and a means to efficiently search for diagnostics or therapeutic interventions for disease conditions.

Quick-Trials for Imaging and Image-Guided Interventions: Exploratory Grants (R21)

PAR-08-147

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA) is intended to support clinical trials conducting preliminary evaluation of the safety and efficacy of imaging agents, as well as an assessment of imaging systems, image processing, image-guided therapy, contrast kinetic modeling, and 3-D reconstruction and other quantitative tools. The rapid translation of promising discoveries in the fields of imaging probes, methodologies, technologies and image-guided therapies to clinical practice requires timely support. This FOA will provide investigators with support for either pilot (Phase I and II) cancer clinical trials, or patient monitoring and laboratory studies. The imaging and Image-guided Intervention (IGI) studies, if proven successful in these early clinical trials, can then be validated in larger studies through competitive R01 mechanisms, or through clinical trials in the Specialized Programs of Research Excellence (SPORES), Cancer Centers and/or Cooperative Groups.

Amount: \$250,000

Application and Early Stage Development of Emerging Technologies in Cancer Research (R21) and (R33)

RFA-CA-10-003 and RFA-CA-10-004

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications that propose exploratory research projects on the initial application of emerging analytical technologies as laboratory or clinical tools. An "emerging technology" is defined as one that has passed the initial developmental stage, but has not yet been evaluated within the context of its intended use. Projects proposed in response to this FOA should have the potential to produce a major impact in a broad area of cancer-relevant research. If successful, these technologies would accelerate research in cancer biology, cancer treatment and diagnosis, cancer prevention, cancer control and epidemiology, and/or cancer health disparities. This FOA solicits R21 applications that have high potential impact and allows for an element of technical risk; preliminary data are not required. All projects must include quantitative milestones (i.e. technical metrics that determine whether the specific aims have been accomplished). Projects proposing to use established technologies where the novelty resides in the biological or clinical question being pursued are not appropriate for this solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program.

Amount: \$275,000

LOI: April 27, 2010; August 30, 2011

Deadline: May 27, 2010; September 30, 2011

Key Words: **Biospecimens, Tumor**

Innovative Technology Development for Cancer Research (R21)

RFA-CA-10-005

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA) issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications proposing technically innovative feasibility studies focused on early stage development of cancer-relevant technologies. If successful, these technologies would accelerate the research and understanding of basic cancer biology, cancer treatment and diagnosis, cancer prevention, cancer control and epidemiology, and/or cancer health disparities. This FOA solicits R21

applications and is suitable for projects at their inception, conceptual or idea based, where technical feasibility of the proposed technology or methodology has not yet been established. The R21 mechanism requires high potential impact and allows for an element of technical risk; projects proposed in response to this FOA may reflect this level of risk but must have concurrent potential to produce a major impact in a broad area of cancer-relevant research. All projects must include quantitative milestones (i.e. technical metrics that determine whether the specific aims have been accomplished). Projects proposing to use technology that is already established or projects where the novelty resides in the biological or clinical question being pursued are examples of topics not appropriate for this solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program.

Amount: \$500,000

LOI: April 27, 2010; August 30, 2012

Deadline: May 27, 2010; September 30, 2012

To learn more: <http://grants.nih.gov/grants/guide/rfa-files/RFA-CA-10-005.html>

Validation and Advanced Development of Emerging Technologies in Biospecimen Science (R33) and (R21)

RFA-CA-10-002 and RFA-CA-10-001

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications proposing technically innovative feasibility studies focused on the advanced development and validation of cancer-relevant technologies that address the issues related to pre-analytical variations in the collection, processing, handling, and storage of biospecimens or its derivatives. The overall goal is to develop technologies capable of interrogating and/or maximizing the quality and utility of biospecimens or their derived samples for downstream molecular analyses. This FOA will support the development of tools, devices, instrumentation, and associated methods to assess sample quality, preserve/protect sample integrity, and establish verification criteria for quality assessment/quality control and handling under diverse conditions. This FOA solicits R33 applications; this mechanism is suitable for projects where proof-of-principle of the proposed technology or methodology has already been established and supportive preliminary data are available. Projects proposing to use established technologies where the novelty resides in the biological or clinical question being pursued is an example of a topic not appropriate for this solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program. Mechanism of Support. This FOA will utilize the R33 grant mechanism and runs in parallel with a FOA of identical scientific scope, RFA-CA-10-001 that solicits applications under the NIH Exploratory/Developmental R21 grant mechanism.

Amount: \$900,000

Strategic Partnering to Evaluate Cancer Signatures [SPECS II] (U01)

PAR-10-126

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI) of the National Institutes of Health (NIH), encourages the submission of grant applications for support of the clinical application of multi-analyte molecular signatures derived from comprehensive molecular annotation of tumors. There is growing recognition in the clinical cancer research community that annotation of tumor specimens with data that integrates information about molecular alterations at the levels of DNA, RNA, and protein provides not only a more complete understanding of tumor biology but also provides a significant opportunity for developing new clinical tools to improve cancer treatment. Translating the knowledge gained from this molecular annotation into tools that can be used in clinical decision-making remains a major challenge. The purpose of this initiative is to build on recent demonstrations that molecular signatures correlate with important clinical parameters in cancer. The goal of this initiative is also to create publications and data sets that will be available and accessible to the scientific community in order to further the development, design, and conduct of future clinical trials (e.g., incorporation of molecular signatures into future clinical trials and large clinical validation studies) and to encourage appropriate commercialization to benefit the public health. The NCI invites investigators to form strategic partnerships that will bring together the multi-disciplinary expertise and resources needed to determine how the information derived from comprehensive molecular analyses can be used to improve patient care and, ultimately, patient outcomes.

Autonomous Robotic Manipulation Software Track (ARM-S)

Broad Agency Announcement (BAA)

DARPA-BAA-10-28

Information Processing Techniques Office (IPTO)

Defense Advanced Research Projects Agency (DARPA)

DARPA seeks innovation to advance the capability of autonomous robotic mobile manipulation. Many systems utilize manipulators to perform tasks with direct manipulator control by human operators who are in a remote location. Often, a manipulator is located on a mobile platform such as a ground robotic vehicle, underwater vehicle, or space vehicle. The envisioned DARPA Autonomous Robotic Manipulation (ARM) program will develop autonomous capabilities for mobile manipulators that improve task performance while, at the same time, removing direct human control. The envisioned Software Track will develop software for grasping, manipulation, and mobile manipulation. It is also envisioned the Software Track will run in parallel with a Hardware Track, and described under a separate BAA contemplated for release at a later date.

Amount: \$1,250,000

International Research in Homeland Security Science & Technology Projects

DHS-10-ST-108-001

Department of Homeland Security (DHS)

Science & Technology Directorate (S&T)

S&T's Chemical and Biological Division is conducting analyses to characterize and prioritize threats. It develops detection systems to provide early warning of a possible attack so as to minimize exposure and speed treatment of victims, conducts forensic analyses to support attribution, and works with our Federal partners who have lead responsibilities in decontamination and restoration, agrodefense, and food security.

Areas of interest for research identified by this Division include:

- Bioforensics
- Next-generation bioassays
- Chemical decontamination
- Foreign animal disease vaccines & diagnostics
- Next-generation biodetection

High-priority technology needs identified by this Division include:

- Tools to detect and mitigate animal disease breakouts
- Improved tools for integrated chemical, biological, radiological, and nuclear (CBRN) risk assessment
- Incident characterization capability for response and restoration
- Improved chemical and biological forensic analysis capability
- Consequence assessments of attacks on chemical facilities and ChemBio attacks on other critical infrastructure
- Integrated chemical, biological, radiological, nuclear, and explosive CBRNE sensor reporting capability
- Handheld rapid biological and chemical detection systems
- Detection paradigms and systems for enhanced, emerging and novel biological threats

Advances in Bioscience for Airmen Performance

BAA-09-02-RH

Air Force Research Laboratory, Human Effectiveness Directorate, Biosciences and Performance Division (AFRL/RHP)

The 711th Human Performance Wing, Human Effectiveness Directorate is soliciting white papers under this announcement for innovative science and technology projects to support advanced bioscience research. Specifically, the Biosciences and Performance Division is seeking unique and innovative research concepts that address its technical mission areas. Research is sought primarily in the following four technical areas: 1) Applied Biotechnology, 2) Biobehavioral Performance, 3) Biomechanics, and 4) Counter proliferation.

1) Applied Biotechnology - Goal is to develop and exploit advances in biotechnology and associated nanotechnologies to enhance performance and situational awareness of the force.

2) Biobehavioral Performance – Goal is to develop bio-based methods and techniques to sustain and optimize airmen’s cognitive performance.

3) Vulnerability Analysis – Goal is to rapidly identify human threat conditions, and sustain/expand Airmen performance in stressful environments. It includes research in physical and physiological biosignatures, neuroscience, anthropometry, biomechanics, human modeling, database networking, and data mining.

4) Counter proliferation – Goal is to improve the Air Force’s ability to locate, identify, track, target, and destroy biological warfare agents (BWA) and other weapons of mass destruction (WMD), as well as anticipate and mitigate WMD effects on AF operations.

Amount: Cost Plus

GPHRC Translational Research RFA

The Center for Clinical and Translational Research and Great Plains Health Research Consortium

UNMC's Center for Clinical and Translational Research (CCTR) has brought together regional institutions into a health research consortium, the "Great Plains Health Research Consortium" (GPHRC). The GPHRC has submitted a NIH Clinical and Translational Science Award (CTSA) proposal which hopes to speed research translation from "bench to bedside" and clinical trials into community-wide applications. UNMC is sponsoring the first GPHRC Seed Grant program, with the primary intent being to bring together new research teams representing 2 or more GPHRC institutions to generate the pilot data needed to support a new extramural grant proposal within the next 1-3 years. Applications that address the health priority areas of the GPHRC as identified below will be given priority in review for this RFA:

- Health disparities including rural health disparities
- Cancer
- Obesity-Diabetes-Vascular Disease (inclusive of cardiovascular and all other types of vascular disease)
- Infectious Diseases
- Musculoskeletal Disease
- Neurologic and Psychobehavioral Disease
- Alcohol and Smoking Related Disease
- Transplantation

Amount: \$100,000

Decision Making in Cancer: Single-Event Decisions (R01) [PA-08-063] and (R21) [PA-08-064]

PA-08-063 and PA-08-064

NIH

The purpose of this Funding Opportunity Announcement (FOA) is to invite applications for research projects that will enhance understanding of human decision-making processes so that individuals can make more informed and satisfying choices regarding their health. The NCI encourages collaborations between researchers studying the processes of basic judgment and decision-making and researchers conducting cancer control investigations that will elucidate single-event decision-making processes, at the level of either the individual patient or health care provider. These decision-making processes are pertinent to cancer prevention, detection, treatment, survivorship, or end-of-life care. For the purpose of this initiative, a single-event decision is defined as a discrete decision made at a specific point in time.

Enhancing Tumoricidal Activity of Natural Killer (NK) Cells by Dietary Components for Cancer Prevention (R01) [PA-08-131] and (R21) [PA-08-132]

PA-08-131 and PA-08-132

NIH

This funding opportunity announcement (FOA) is designed to stimulate research efforts aimed at establishing the physiological significance of dietary components in modulating the tumoricidal cell activity of natural killer (NK) cells for cancer prevention. The focus

of research projects proposed in response to this FOA should be on defining the minimum quantity and duration of exposure to specific dietary components to modulate tumoricidal cell activity of NK cells for cancer prevention and the underlying mechanism(s) accounting for this response. Proposed projects must include animal and/or human investigations to be considered responsive to this announcement. Highly purified populations of immune cells, specific tumor cells such as RMA-S that lack class I MHC expression, target cell-free system, or single-cell assays may be used to define the molecular basis for the diet-induced changes in tumoricidal activity. However, the in vitro studies are only to be used to support in vivo studies and should not constitute the primary focus of the application. Molecular targets for food components may be examined at the sites of the tumoricidal cell receptors and cancer cell specific ligands, the output of tumoricidal cytokines (e.g., IFN-g), and the release of lytic granules such as a granulysin, perforin, and serine proteases (granzymes).

Amount: varies

LOI: N/R

Deadline: Standard dates apply

Correlative Studies with Specimens from Multi-Site Trials (R21) [PA-08-133] and (R01) [PA-08-134]

PA-08-133 and PA-08-134

NIH

This Funding Opportunity Announcement (FOA) is intended to support translational correlative studies that utilize annotated tumor and/or other biospecimens collected during large-scale multi-institutional clinical and/or prevention trials, respectively. The Cancer Therapy Evaluation Program (CTEP), the Cancer Diagnosis Program (CDP), and the Cancer Biomarkers Research Group (CBRG) of the NCI are cooperatively sponsoring this FOA with the overarching goal to facilitate predictions of responses to current interventions, and inspire future development of improved therapeutic and preventive strategies. Projects proposed in response to this FOA should address the correlations between intervention outcomes and cancer patients' disease characteristics determined at various cellular/molecular levels. For example, disease progression patterns may be correlated with tumor genotypic and/or phenotypic profiles (at the levels of the genome, epigenome, gene expression and/or protein and non-protein molecular markers. This FOA will only support studies that use tumor specimens linked to specific interventions/trials. To be able to achieve these translational goals, the proposed projects are expected to rely on interactions between basic researchers and clinical investigators, in order to improve future drug development and interventions.

Amount: Direct costs are limited to \$275,000 over an R21 2-year period, with no more than \$200,000 in direct costs allowed in any single year.

Research on Malignancies in the Context of HIV/AIDS (R21)

PA-07-454

National Institutes of Health (NIH)

The National Cancer Institute (NCI) and National Institute of Dental and Craniofacial Research (NIDCR) are accepting proposals for research that will advance our understanding of the risks, development, progression, diagnosis, and treatment of malignancies observed in individuals with an underlying HIV infection or AIDS. Through this funding opportunity announcement (FOA), the NCI and NIDCR seek to encourage research in areas such as the study of the etiologic factors, cofactors, pathogenesis, and consequences of HIV-associated malignancies in diverse populations. Research on non-AIDS defining malignancies in the context of HIV infection is also encouraged. The incidence of non-AIDS-defining malignancies (e.g., anal, skin, and lung cancers as well as Hodgkin's disease) appear to be increasing in the era of Highly Active Antiretroviral Treatment. This FOA extends to research efforts that will provide information on the clinical outcomes of such cancers in the HIV-infected population and identify specific contributions resulting from HIV infection for the development and pathogenesis of these cancers. Ultimately, such efforts could inform screening approaches and therapies targeted to the HIV-infected population.

Research on Clinical Decision Making in People with or at Risk for Life-Threatening Illness (R01) and (R21)

PA-09-122 and PA-09-121

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

This funding opportunity announcement (FOA) issued by the National Institute of Nursing Research (NINR) and the National Cancer Institute (NCI), National Institutes of Health, seeks to stimulate research on the decision-making processes made by persons at risk for and those faced with life-threatening illness. These illnesses are ones that almost always lead to death in a fairly short period of time if left untreated, but may be chronic or even cured if dealt with early in the disease process. An example of a life-threatening illness that may be chronic for some years would be HIV infection when treated. An example of a life-threatening illness that may be cured in its early stages would be breast cancer. Decision-making can occur from the point of adopting preventive behaviors through the end of life.

Examples of such decisions could include participating in an HIV vaccine clinical trial, testing for genetic disorder, choosing a treatment intervention vs. watchful waiting (as in early stage prostate cancer), choosing a treatment intervention among several options, joining a therapeutic clinical trial, or making end-of-life care decisions.

PAR-10-096

National Heart, Lung, and Blood (NHLBI)

The purpose of this Funding Opportunity Announcement is to provide a vehicle for submitting grant applications for investigator-initiated multi-site Phase II or Phase III randomized, controlled clinical trials. The trials may address any research question related to the mission and goals of NHLBI and may test clinical or behavioral interventions.

Amount: varies

LOI: N/R

Deadline: Standard dates apply

Etiology, Prevention, and Treatment of Hepatocellular Carcinoma [(R01) PA-08-243] and [(R21) PA-08-244] and [(P01) PAR-08-245]

PA-08-243 and PA-08-244 or PAR-08-245

National Cancer Institute

National Institute on Alcohol Abuse and Alcoholism

National Institute of Diabetes and Digestive and Kidney Diseases

With this Funding Opportunity Announcement (FOA), the National Cancer Institute (NCI), the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) encourage grant applications that: (a) address the etiology and etiologic mechanisms of hepatocellular carcinoma (HCC); (b) propose development of animal models for HCC; (c) propose novel approaches to prevent HCC malignancy; (d) propose therapeutic or diagnostic tools for reliable prognostic indicators for HCC; and/or (e) develop therapeutic approaches to minimize morbidity and mortality associated with HCC in humans. The primary focus of the proposed project must be on the basic biology, prevention, and/or treatment of liver cancer. Applications solely concerned with population studies and epidemiology will not be supported in connection with this FOA. This FOA will utilize the R01 grant mechanism and runs in parallel with two FOAs of similar scientific scope: (1) PA-08-244, for pilot

exploratory/developmental projects using the R21 mechanism; and (2) PAR-08-245, for program project grants under the P01 mechanism.

Key Words: **Hepatocellular Carcinoma, Alcohol Liver Disease, Cancer**

Stem Cells and Cancer (R21)

PA-08-165

National Cancer Institute

National Institute on Aging

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), and the National Institute on Aging (NIA), encourages research in all aspects of tumor stem cell biology, including the molecular and biochemical regulation of embryonic and adult stem cell behavior relevant to tumor formation. This FOA intends to stimulate efforts on isolation and characterization of tumor stem cells from a large spectrum of tumors. In addition, more research is encouraged to understand the genetic and biochemical regulatory mechanisms that control the self-renewal phenotype, asymmetric cell division, and the stem cell microenvironment (or "niche").

Amount: \$275,000 over a 2-year period

PA-08-140 and PA-08-141

National Cancer Institute

National Institute of Environmental Health Sciences

Office of Dietary Supplements

This Funding Opportunity Announcement (FOA) encourages innovative preclinical research applications that will enhance the understanding of the relationship between exposure(s) to bioactive food components and/or environmental chemicals in utero, hormonal and growth-factor response, gene expression or epigenetic changes, and subsequent mammary cancer risk in preclinical models. This FOA encourages applications that apply new high-throughput genomic, epigenomic, proteomic, and metabolomic technologies to determine how dietary exposures in utero influence adult breast cancer susceptibility. The resulting information will help define effective maternal dietary intervention strategies for breast cancer prevention in offspring.

Prioritizing Molecular Targets for Cancer Prevention with Nutritional Combinations (R01)

PA-10-035

National Cancer Institute (NCI)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), invites research applications to enhance our understanding about the dynamic interrelationship that exists between bioactive food components (and/or combinations thereof) and cancer prevention. Although much evidence exists that dietary components are linked to cancer prevention, the interactions among dietary bioactive compounds and food combinations remains under-investigated. Applications are encouraged to consider either multiple dietary bioactive components, intact foods or multiple foods utilizing physiologically relevant concentrations of the agents. New genetic technologies may be employed to study the impact of dietary components on complex cellular and molecular networks, as part of the effort to better understand the basis for the multifaceted interactions of food components with cancer prevention mechanisms. Specifically, applications that apply new high-throughput genomic, epigenomic, proteomic, and metabolomic technologies to prioritize molecular targets of dietary components are highly encouraged. The sites of action that may be evaluated include carcinogen metabolism, DNA repair, cell proliferation, apoptosis, differentiation, hormonal regulation, energetics, inflammation, and/or angiogenesis. In addition, applications should either evaluate multiple molecular targets within a cancer process or multiple processes in order to prioritize which process(es) is/are most involved in bringing about a phenotypic change. It is hoped that advances in this area may assist in optimizing cancer prevention while minimizing potential toxicity due to food components. The resulting information will help define which foods or food components should be considered in isolation or in combination when developing dietary strategies to reduce cancer risk and/or modify tumor behavior.

PA-09-234 and PA-09-235

National Cancer Institute (NCI)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

Office of Dietary Supplements (ODS)

The aim of this funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), the National Institute on Alcohol Abuse and Alcoholism (NIAAA), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), is to promote clinical and preclinical research to determine how diet and dietary factors, including dietary supplements, impact DNA methylation, histone posttranslational modification, noncoding RNA, and other epigenetic processes involved in cancer prevention and development. Another important aim of this FOA is to encourage collaborations between nutrition and epigenetic experts to study bioactive food components with cancer-preventative properties and to examine key epigenetic events in cancer processes (e.g., carcinogen metabolism, cell division, differentiation, and apoptosis) in order to begin to establish linkages between epigenetics, methylation patterns, and tumor incidences/behaviors.

PA-08-220 and PA-08-221

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

Office of Dietary Supplements (ODS)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), the National Institute of Nursing Research (NINR), and the Office of Dietary Supplements (ODS), all of the National Institutes of Health (NIH), solicits applications for research projects that can combine information on individual genetic variations from the Human Genome and International HapMap Projects to stimulate small pilot dietary intervention studies. The overarching goal is to examine whether genetic variants can predict individual response to dietary components that alter cancer processes and modify individual susceptibility to cancer. These studies will allow for personalization of cancer preventive dietary strategies to reduce cancer risk in genetically susceptible individuals. Associational and non-interventional epidemiologic-focused studies will not be supported in conjunction with this FOA.

Small Grants for Behavioral Research in Cancer Control (R03)

PA-09-003

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute of Nursing Research (NINR), at the National Institutes of Health (NIH), is intended to provide support for either new investigators in cancer-related behavioral research, or investigators who want to refocus their research interests toward behavioral research in cancer control. The program is designed to facilitate the growth of a nationwide cohort of scientists with research experience in behavioral cancer control and design of public health interventions. Preliminary data for the proposed projects are not required. Overarching goals are to: (1) encourage new investigators to enter the field of behavioral research in cancer control and initiate their long-term career development aimed at becoming independent investigators in the field, and (2) support research on transfer of behavioral science knowledge into cancer control practice.

Amount: \$100,000

LOI: N/R

Deadline: April 20, 2010; August 20, 2010; December 20, 2010; April 20, 2011; August 22, 2011; December 20, 2011

Developmental Projects in Complementary Approaches to Cancer Care and Treatment (R21) and (R03)

PA-09-167 and PA-09-168

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the National Institute of Nursing Research (NINR), of the National Institutes of Health, invites applications for basic, pre-clinical, and clinical complementary cancer research. The research should relate to the areas of prevention, diagnosis, and treatment of cancer as well as management of cancer symptoms and side effects due to conventional cancer treatment. In addition, this FOA encourages the development and application of emerging and innovative technologies, including identification of novel therapeutics in the pharmacopoeia of Traditional Medical Systems (as defined by the World Health Organization), use of complementary approaches to improve the therapeutic ratio of standard and investigational anti-cancer therapies, and research on lifestyle modifications (e.g. diet, exercise, mind-body approaches) for their impact on cancer outcomes (e.g., response to conventional cancer therapy, survival). The overarching goals of this FOA is to encourage investigators to submit high quality, preliminary research of humans that will advance the science of Complementary and Alternative Medicine (CAM) and provide a solid foundation and justification for future research project (R01) grant applications to definitively determine the efficacy of CAM approaches.

Amount: \$275,000

Specialized Programs of Research Excellence (SPOREs) in Human Cancer for Years 2010, 2011 and 2012 (P50)

PAR-10-003

National Cancer Institute (NCI)

National Institute of Dental and Craniofacial Research (NIDCR)

National Institute of Neurological Disorders and Stroke (NINDS)

The National Cancer Institute (NCI), the National Institute of Dental and Craniofacial Research (NIDCR), and the National Institute of Neurological Disorders and Stroke (NINDS), at the National Institutes of Health (NIH), invite new or renewal (competing) applications for P50 Research Center Grants for Specialized Programs of Research Excellence (SPOREs). The program will fund 5-year P50 SPORE grants to support state-of-the-art investigator-initiated research that will contribute to improved detection, diagnosis, treatment, and prevention of an organ-specific cancer (or a related group of cancers). SPOREs are expected not only to conduct a wide spectrum of research activities, but also to contribute significantly to the development of specialized research COREs, improved research model systems, and collaborative research projects with other institutions. The research supported through this program must be translational in nature and must always be based upon knowledge of human biology stemming from research using cellular, molecular, structural, biochemical, and/or genetic experimental approaches.

Amount: \$12,500,000

Development, Application, and Evaluation of Prediction Models for Cancer Risk and Prognosis (R01) and (R21)

PA-10-025 and PA-10-026

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), encourages research applications from clinicians, epidemiologists, geneticists, statisticians, and translational researchers working in the field of cancer control and prevention to improve existing models for cancer risk and prognosis by developing innovative research projects that use existing data; develop new models for cancer risk and prognosis; and validate new models and evaluate their utility in research and clinic settings. To explore this opportunity, the NCI Division of Cancer Control and Population Sciences (DCCPS) and the Division of Cancer Treatment and Diagnosis (DCTD) encourage applications for research projects to develop, apply, and evaluate new and existing cancer risk and prognostic prediction models for use by researchers, clinicians, and the general public. This FOA is designed to provide a mechanism of support for investigators to address two major challenges in model development, which are: integrating diverse types of data (e.g., clinical, demographic, pathologic, environmental, epidemiologic, outcomes, and genetic data from varied data marts or warehouses); and ensuring adequate validation (i.e., using multiple separate populations to define sensitivity, specificity, and positive and negative predictive values).

Erythropoiesis Stimulating Agents and Tumor Progression

[(R01) PA-09-023] and [(R21) PA-09-024]

PA-09-023 and PA-09-024

National Cancer Institute (NCI)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), invites applications for research projects that investigate the effects of Erythropoietin (EPO) on tumor cell growth. EPO has been widely used to relieve the anemia associated with renal failure. In addition, EPO and other erythropoiesis stimulating agents (ESAs) have recently been used to treat the anemia associated with cancer chemotherapy. However, several clinical trials involving administration of ESAs, have suggested that ESAs may

accelerate tumor progression and increase mortality in cancer patients. It is therefore important to understand the biology of ESAs on tumor cell growth and apoptosis. The purpose of this FOA is to stimulate high quality research on the effects of ESAs on tumor cell biology and tumor progression.

Exploratory Studies in Cancer Detection, Diagnosis, and Prognosis (R21)

PA-08-267

National Cancer Institute (NCI)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), invites grant applications from institutions and organizations that are interested in developing and testing innovative methods in cancer detection, diagnosis, and prognosis. The NCI is especially interested in research studies that focus on the development and testing of improved methods for detecting specific characteristics of cancer, which can be subsequently used for the clinical management of cancer patients or individuals who are at risk for (developing) cancer. It is important that research studies focus on the search for molecular and cellular differences between tumors, pre-malignant, or normal tissues. The studies should determine the clinical translational significance of these differences by correlation with clinical parameters, in order to answer clinical problems related to detection, diagnosis, treatment, and prognosis.

Validation and Advanced Development of Emerging Technologies in Biospecimen Science (R33) and (R21)

RFA-CA-10-002 and RFA-CA-10-001

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications proposing technically innovative feasibility studies focused on the advanced development and validation of cancer-relevant technologies that address the issues related to pre-analytical variations in the collection, processing, handling, and storage of biospecimens or its derivatives. The overall goal is to develop technologies capable of interrogating and/or maximizing the quality and utility of biospecimens or their derived samples for downstream molecular analyses. This FOA will support the development of tools, devices, instrumentation, and associated methods to assess sample quality, preserve/protect sample integrity, and establish verification criteria for quality assessment/quality control and handling under diverse conditions. This FOA solicits R33 applications; this mechanism is suitable for projects where proof-of-principle of the proposed technology or methodology has already been established and supportive preliminary data are available. Projects proposing to use established technologies where the novelty resides in the biological or clinical question being pursued is an example of a topic not appropriate for this solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program. Mechanism of Support. This FOA will utilize the R33 grant mechanism and runs in parallel with a FOA of identical scientific scope, RFA-CA-10-001 that solicits applications under the NIH Exploratory/Developmental R21 grant mechanism.

Amount: \$900,000

Key Words:

Cancer Prevention Research Small Grant Program (R03)

PAR-08-055

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA) is designed to enhance the basic and applied cancer prevention research. The National Cancer Institute (NCI) invites applications that propose small and time-limited projects pertinent to the development of cancer chemoprevention agents, biomarkers for early cancer detection, cancer-related nutrition science, and/or clinical prevention studies that focus on specific target organs. Proposed projects may involve basic and/or translational research and/or human subjects-oriented research. However, treatment-related quality-of-life population-based studies, as well as projects focused on cancer etiology, metastasis, or treatment will be considered non-responsive to this FOA. New, as well as established, investigators in relevant fields and disciplines (e.g., chemoprevention, nutritional science, genetics, infectious agents, and early detection, including biomarker development and validation) are encouraged to apply for these small grants to test the feasibility of innovative ideas or carry out pilot studies. Ultimately, these small grants are expected to facilitate the development of full research projects.

Amount: \$100,000

LOI: N/R

Deadline: July 19, 2010; December 09, 2010

Application and Early Stage Development of Emerging Technologies in Cancer Research (R21) and (R33)

RFA-CA-10-003 and RFA-CA-10-004

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications that propose exploratory research projects on the initial application of emerging analytical technologies as laboratory or clinical tools. An “emerging technology” is defined as one that has passed the initial developmental stage, but has not yet been evaluated within the context of its intended use. Projects proposed in response to this FOA should have the potential to produce a major impact in a broad area of cancer-relevant research. If successful, these technologies would accelerate research in cancer biology, cancer treatment and diagnosis, cancer prevention, cancer control and epidemiology, and/or cancer health disparities. This FOA solicits R21 applications that have high potential impact and allows for an element of technical risk; preliminary data are not required. All projects must include quantitative milestones (i.e. technical metrics that determine whether the specific aims have been accomplished). Projects proposing to use established technologies where the novelty resides in the biological or clinical question being pursued are not appropriate for this solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program.

Amount: \$275,000

LOI: April 27, 2010; August 30, 2011

Deadline: May 27, 2010; September 30, 2011

To learn more: <http://grants.nih.gov/grants/guide/rfa-files/RFA-CA-10-003.html> and <http://grants.nih.gov/grants/guide/rfa-files/RFA-CA-10-004.html>

Key Words: **Biospecimens, Tumor**

Strategic Partnering to Evaluate Cancer Signatures [SPECS II] (U01)

PAR-10-126

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI) of the National Institutes of Health (NIH), encourages the submission of grant applications for support of the clinical application of multi-analyte molecular signatures derived from comprehensive molecular annotation of tumors. There is growing recognition in the clinical cancer research community that annotation of tumor specimens with data that integrates information about molecular alterations at the levels of DNA, RNA, and protein provides not only a more complete understanding of tumor biology but also provides a significant opportunity for developing new clinical tools to improve cancer treatment. Translating the knowledge gained from this molecular annotation into tools that can be used in clinical decision-making remains a major challenge. The purpose of this initiative is to build on recent demonstrations that molecular signatures correlate with important clinical parameters in cancer. The goal of this initiative is also to create publications and data sets that will be available and accessible to the scientific community in order to further the development, design, and conduct of future clinical trials (e.g., incorporation of molecular signatures into future clinical trials and large clinical validation studies) and to encourage appropriate commercialization to benefit the public health. The NCI invites investigators to form strategic partnerships that will bring together the multi-disciplinary expertise and resources needed to determine how the information derived from comprehensive molecular analyses can be used to improve patient care and, ultimately, patient outcomes.

Exploratory Grant Award to Promote Workforce Diversity in Basic Cancer Research (R21)

PAR-09-162

National Cancer Institute (NCI)

This funding opportunity announcement (FOA), issued by the Center to Reduce Cancer Health Disparities (CRCHD) and the Division of Cancer Biology (DCB), at the National Cancer Institute (NCI), invites applications from investigators from diverse populations with interest in research projects focused on the basic biology of cancer. The NIH recognizes a unique and compelling need to promote diversity in the basic biology of cancer research workforce. The purpose of this FOA is to improve the diversity of the research workforce by supporting and recruiting eligible investigators from groups that have been shown to be underrepresented. This initiative will also provide a bridge to investigators that have completed their training and may need extra time to develop a full RO1 proposal. The NCI expects efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups; to balance and broaden the perspective in setting research priorities; and to increase basic cancer researchers from diverse backgrounds.

Amount: \$275,000

Innovative Technology Development for Cancer Research (R21)

RFA-CA-10-005

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA) issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), solicits grant applications proposing technically innovative feasibility studies focused on early stage development of cancer-relevant technologies. If successful, these technologies would accelerate the research and understanding of basic cancer biology, cancer treatment and diagnosis, cancer prevention, cancer control and epidemiology, and/or cancer health disparities. This FOA solicits R21 applications and is suitable for projects at their inception, conceptual or idea based, where technical feasibility of the proposed technology or methodology has not yet been established. The R21 mechanism requires high potential impact and allows for an element of technical risk; projects proposed in response to this FOA may reflect this level of risk but must have concurrent potential to produce a major impact in a broad area of cancer-relevant research. All projects must include quantitative milestones (i.e. technical metrics that determine whether the specific aims have been accomplished). Projects proposing to use technology that is already established or projects where the novelty resides in the biological or clinical question being pursued are examples of topics not appropriate for this

solicitation and will be returned as non-responsive. This funding opportunity is part of a broader NCI-sponsored Innovative Molecular Analysis Technologies (IMAT) Program.

Amount: \$500,000

FY10 Neurofibromatosis Research Program (NFRP)

W81XWH-10-NFRP-CTA

W81XWH-10-NFRP-IIRA

W81XWH-10-NFRP-IIFRA

DOD

Congressionally Directed Medical Research Programs (CDMRP)

The vision of the FY10 NFRP is to find and fund the best research to eradicate the clinical impact of NF. Toward this goal, the NFRP seeks to:

- Support innovative, high-impact research that will foster new directions for and address neglected issues in NF research,
- Sponsor multidisciplinary and multi-institutional collaborations that will bring new perspectives to the field,
- Foster the next generation of NF investigators,
- Promote translational and clinical studies to move promising ideas from bench to bedside,
- Develop a balanced portfolio of meritorious research related to all aspects of NF1, NF2, and Schwannomatosis.

Areas of Encouragement: The FY10 NFRP encourages research proposals that specifically address the critical needs of the NF community in the following areas:

- Complications of NF with high mortality such as neoplasms and cerebrovascular abnormalities;
- Complications of NF with high morbidity such as skeletal maladies, learning deficits, hormone-associated effects, and pain;
- Refinement and standardization of imaging techniques, molecular and cellular markers, and quality of life metrics for use in future clinical trials; and
- Translational research such as the development or preclinical testing of therapeutic agents for the treatment of NF.

Ovarian Cancer Research Program Pilot Award

W81XWH-10-OCRPA

Department of Defense Congressionally Directed Medical Research Programs

The OCRP Pilot Award supports conceptually innovative, high-risk/high-reward research that could ultimately lead to critical discoveries or major advancements that will drive the field of ovarian cancer forward. Research priorities should include a testable hypothesis based on strong scientific rationale. Successful projects should provide a catalyst to expand or modify current thinking and/or approaches in ovarian cancer research. Preliminary data are not required, but are allowed. The strength of the proposal should be based on sound scientific rationale and logical reasoning. Clinical trials will not be supported by this award mechanism.

NEW for FY10 OCRP is a revised definition of innovation. Innovation is a significant feature of the Pilot Award. Innovative ideas are those that, if proven correct, will provide totally new paradigms, technologies, molecules, or applications and that, when applied in the future, will reduce the burden of ovarian cancer.

Amount: \$200,000

Prostate Cancer Research Program Impact Award

W81XWH-10-PCRPA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

This award will support research projects specifically focused on making a major impact on one critical issue in prostate cancer: Reducing or eliminating the over-treatment of primary prostate cancer. Projects funded by this award will, if successful, ultimately change the standard of practice for decision-making in the treatment of primary prostate cancer. Studies conducted under the Impact Award may involve the development of surveillance mechanisms, including improvements in current clinical and diagnostic tools to monitor prostate cancer patients. Proposed projects may include basic, translational, or clinical research, including clinical trials, provided the overall project is hypothesis-based and focused on the problem of prostate cancer over-treatment. Applications for the PCRPA Impact Award should also address at least one of the following FY10 PCRPA focus areas:

Biomarkers

Genetics

Imaging

Survivorship

Therapy

Tumor Biology

Amount: \$750,000

LOI: March 17, 2010

Deadline: April 19, 2010

DoD Breast Cancer Idea Award

W81XWH-10-BCRP-IDEA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

The Idea Award is designed to promote new ideas that are still in the early stages of development and have the potential to yield highly impactful data and new avenues of investigation. This mechanism supports conceptually innovative, high-risk/high-reward research that could ultimately lead to critical discoveries or major advancements that will accelerate the eradication of breast cancer. Research projects should include a well-formulated, testable hypothesis based on strong scientific rationale. The BCRP seeks applications from all areas of basic, translational, clinical, behavioral, and epidemiological research. Presentation of preliminary data is not consistent with the intent of the Idea Award mechanism. While the inclusion of preliminary data is not prohibited, the strength of the application should not rely on preliminary data. Innovation and Impact are the most important aspects of the Idea Award.

Amount: \$375,000-\$750,000

LOI: April 21, 2010

Deadline: May 5, 2010

Breast Cancer Transformative Vision Award

W81XWH-10-BCRP-TVA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

Vision for dramatically affecting the prevention or treatment of breast cancer, and a plan to test and achieve the vision as quickly as possible. The critical components of this award mechanism are: Vision: The most important aspect of the Transformative Vision Award is the articulation of the vision for a new approach to significantly impact the prevention or treatment of breast cancer. The final impact may be near-term or long-term, but the success of the vision must be transformative on breast cancer. A careful presentation of the state-of-the-art, and how the vision will transform this state, must be described. Implementation: The vision must be supported by a detailed plan that identifies critical milestones and clearly outlines the innovations and technical solutions that will be implemented to accomplish the milestones. It is expected that the proposed plan will present an exceptional level of innovation and creativity, and that the Principal Investigator (PI) will assemble the team necessary to realize the vision.

Physician Training Awards in Preventive Medicine

ACS

This award is made to support primary care physicians with a rank of instructor to assistant professor who are pursuing an academic career with an emphasis on cancer control.

Amount: \$300,000

LOI: N/R

Deadline: April 1, annually

To learn more:

http://www.cancer.org/docroot/RES/content/RES_5_2x_Physician_Training_Awards_in_Preventive_Medicine.asp?sitearea=RES

Key Words:

Postdoctoral Fellowship

ACS

This award is to support the training of researchers who have just received their doctorate to enable them to qualify for an independent career in cancer research (including basic, preclinical, clinical, psychosocial, behavioral, and epidemiologic research).

Amount: one to three years with progressive stipends of \$40,000, \$42,000, and \$44,000 per year, plus a \$4,000 per year institutional allowance

LOI: N/R

Deadline: April 1 and October 15; annually

To learn more: http://www.cancer.org/docroot/RES/content/RES_5_2x_Postdoctoral_Fellowships.asp?sitearea=RES

Key Words:

AACR-FNAB Fellows Grant for Translational Pancreatic Cancer Research

American Association for Cancer Research (AACR)

One-year grant of \$35,000. Research projects are restricted to translational pancreatic cancer research that includes the use of human tissue and has implications for therapeutic application and individualized medicine. Proposed research must have implications for individualized cancer treatment and must make use of human biopsies or samples, such as needle biopsies or circulating cancer cells. In vivo primary tumor explants meet these criteria, but xenografts from established cell lines do not.

Amount: \$35,000

LOI: N/R

Deadline: November 18, 2010

To learn more: <http://www.aacr.org/home/scientists/research-funding--fellowships/fellows-grants.aspx>

Key Words: **Pancreatic Cancer**

Complementary & Alternative Medicine (CAM)

Centers of Excellence for Research on CAM (CERC) for Pain (P01)

New

RFA-AT-10-002

National Center for Complementary and Alternative Medicine, (NCCAM/NIH)

The purpose of this Funding Opportunity Announcement (FOA) is to support and enhance research on the application and use of promising complementary/alternative/integrative medicine (CAM/IM) modalities or approaches in the setting of chronic pain. Specifically, this FOA encourages applications for Centers comprised of three or four synergistic, R01-comparable projects by multidisciplinary research teams focused on the basic, mechanistic, and/or translational research questions that must be addressed in order to better understand the optimal application and use of CAM/IM interventions for treating or ameliorating chronic pain.

Amount: \$6,250,000

LOI: July 13, 3010

Deadline: August 13, 2010

To learn more: <http://grants.nih.gov/grants/guide/rfa-files/RFA-AT-10-002.html>

Collaborative R34s for Pilot Studies of Innovative Treatments in Mental Disorders (Collaborative R34)

PA-09-075

National Institute of Mental Health (NIMH)

National Center for Complementary and Alternative Medicine

This Funding Opportunity Announcement (FOA), issued by the National Institute of Mental Health (NIMH) and the National Center for Complementary and Alternative Medicine (NCCAM), seeks to support collaborative preliminary intervention studies to evaluate the feasibility, tolerability, acceptability and safety of novel mechanism drug candidates, promising investigational new drugs (INDs), or novel psychosocial strategies for the treatment of mental disorders and for obtaining the preliminary data needed as a pre-requisite to larger-scale (efficacy or effectiveness) intervention or services studies. This FOA should be used when at least two but no more than three sites are needed to complete the study. The collaborating studies should be organized in order to increase sample size, accelerate recruitment, and/or increase sample diversity and representation. For a linked set of collaborative R34s, each site shall have its own Project Director/Principal Investigator and provide for a mechanism for cross-site coordination, quality control, database management, statistical analysis, and reporting.

Amount: \$450,000

LOI: N/R

Deadline: Standard dates apply

Developmental Projects in Complementary Approaches to Cancer Care and Treatment (R21) and (R03)

PA-09-167 and PA-09-168

National Cancer Institute (NCI)
National Institute of Nursing Research (NINR)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the National Institute of Nursing Research (NINR), of the National Institutes of Health, invites applications for basic, pre-clinical, and clinical complementary cancer research. The research should relate to the areas of prevention, diagnosis, and treatment of cancer as well as management of cancer symptoms and side effects due to conventional cancer treatment. In addition, this FOA encourages the development and application of emerging and innovative technologies, including identification of novel therapeutics in the pharmacopoeia of Traditional Medical Systems (as defined by the World Health Organization), use of complementary approaches to improve the therapeutic ratio of standard and investigational anti-cancer therapies, and research on lifestyle modifications (e.g. diet, exercise, mind-body approaches) for their impact on cancer outcomes (e.g., response to conventional cancer therapy, survival). The overarching goals of this FOA is to encourage investigators to submit high quality, preliminary research of humans that will advance the science of Complementary and Alternative Medicine (CAM) and provide a solid foundation and justification for future research project (R01) grant applications to definitively determine the efficacy of CAM approaches.

Amount: \$275,000

Stress Pathways in Alcohol Induced Organ Injury and Protection (R01) and (R21)

New

PA-10-093 and PA-10-094

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose studying the role of cellular stress responses, the cytoplasmic classical stress response or heat shock response (HSR) and the endoplasmic reticulum (ER) stress, in alcohol-induced tissue injury and tissue protection. While excessive alcohol use causes organ damage, moderate alcohol consumption may be beneficial. The underlying molecular mechanisms for this apparent dichotomy of alcohol's harmful and salutary effects are currently not fully understood. Alcohol induces cellular stress pathways in the cytoplasm and in the endoplasmic reticulum that may significantly be involved in alcohol-induced tissue injury or mediate tissue protection depending on the quantity, frequency, duration, and temporal pattern of drinking. Hence, studies of the effects of alcohol on cellular stress pathways are critical to understand the mechanisms of alcohol-induced injuries or protection to develop new strategies for prevention, diagnosis and treatment. The purpose of this FOA is to: (1) acquire insight into how acute or chronic alcohol consumption affects cellular stress pathways and in turn, how these changes contribute to alcohol-induced injury/protection; (2) investigate how alcohol induced stress responses mediate cell survival and death signaling pathways at macromolecular, organelle, cellular and organism level contributing to alcohol-induced tissue injury/protection; (3) develop potential stress related biomarkers for prognosis, diagnosis of tissue injury/protection, furthermore identify new targets for their therapeutic interventions. Utilizing innovative experimental design and emerging technologies, such as deep sequencing, genomics, proteomics, metabolomics, bioinformatics, and novel imaging techniques these investigations are expected to provide a more comprehensive understanding of how alcohol affects the evolutionally conserved stress pathways and elucidate their roles in tissue injuries and repair.

Key Words: **Alcohol-Induced Tissue Injury**

The Role of Cellular Organelles in Alcohol-Induced Tissue Injury (R01) and (R21)

New

PA-10-085 and PA-10-086

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose to study biological processes involving the cellular organelles in alcohol-induced tissue injury. Excessive alcohol consumption can damage many organ systems including the liver, heart, pancreas, brain, and lung. However, the mechanisms for these injuries are currently not fully understood. Cellular organelles play an important role in cellular functions and are significantly involved in alcohol-induced tissue injury. Thus, studies of alcohol's effects on the structure and function of cellular organelles are critical to better understand the mechanisms of alcohol-induced injuries and to develop new strategies for their diagnosis and treatment. The purpose of this FOA is to: (1) better understand how acute or chronic alcohol consumption affects the structure and function of cellular organelles, and in turn, how these changes contribute to alcohol-induced injury; (2) investigate how variations of proteins in cellular organelles, or their regulation and function, including cellular signaling pathways, contribute to an individual's response to acute or chronic alcohol intake and alcohol-induced tissue injury; (3) develop potential biomarkers for prognosis and diagnosis of tissue injury, or identify new targets for therapeutic interventions. This FOA aims to foster the utilization of innovative experimental design and emerging technologies, such as genomics, proteomics, metabolomics, bioinformatics, as well as novel microscopic imaging techniques that illuminate functions in intact cells and tissues, to generate new mechanistic and clinical insights into alcohol-induced tissue injuries.

Large Scale Production of Perturbagen-Induced Cellular Signatures (U54)

RFA-RM-10-003

National Institutes of Health (NIH)

National Human Genome Research Institute (NHGRI)

National Heart Lung and Blood Institute (NHLBI)

This FOA seeks to establish a pilot-scale data production effort to systematize approaches for identifying mechanism-based associations among the effects of disparate biological perturbations, a knowledge base that can be used to study functional relationships among the responding cellular components. The Library of Integrated Network-Based Cellular Signatures (LINCS) program will support the high-throughput collection and integrative computational analysis of informative molecular activity and cellular feature signatures generated in response to a variety of perturbing agents, including siRNAs and small bioactive molecules, which are applied to a set of carefully selected cell types. The resulting knowledge will form the basis of a long-lived resource that can be used

broadly by the community. For example LINCS may inform association of disease states with detailed molecular or cellular phenotypes, and ultimately associate disease with specific gene networks, or inform the mechanism of action of known drugs. This FOA seeks to fund pilot-scale data production efforts that will produce a usable initial resource while addressing the following issues: optimization of methods, integration of data, and scalability. Pilot production efforts will interact with multiple future additional components (data analysis and informatics tools; and development and integration of new production-ready technologies) of the LINCS program.

Amount: \$4,200,000

LOI: April 1, 2010

Key Words: **Cellular Signaling, Small Molecules**

Developmental Pharmacology (R03)

PAR-08-215

National Institutes of Health (NIH)

The purpose of this initiative is to encourage research to enhance our understanding of influences of development on mechanisms of drug action, pharmacodynamics, and drug biotransformation, prenatally and from birth through adolescence in appropriate in vivo or in vitro experimental systems including both human and animal models. In addition, because drugs are now being developed which target specific receptors or modulators (including those which may influence both safety and efficacy endpoints), it is imperative to determine their functional expression across the course of development. Successful applications should be designed around a central theme of ontogeny of processes, including cell division and differentiation, that have pharmacologic and clinical relevance, with emphasis on the interaction or relationships between these processes (e.g., drug metabolism and drug transport, receptors and ion channels, receptors and pharmacologic ligands) and application to the study of drugs in children and developing animals.

Amount: \$100,000

Key Words: **Pharmacology**

Metals in Medicine (R01)

PA-08-251

National Institute of General Medical Sciences

National Cancer Institute

National Institute of Environmental Health Sciences

Office of Dietary Supplements

The objective of this Funding Opportunity Announcement (FOA), issued by the National Institute of General Medical Sciences (NIGMS), National Cancer Institute (NCI), National Institute of Environmental Health Sciences (NIEHS), and the Office of Dietary Supplements (ODS), National Institutes of Health is to encourage research that bridges the areas of inorganic chemistry and medicine. The mechanisms by which organisms control transition metal ions and the roles of these metals in cellular regulation and signaling in health and disease are of principal interest. The interactions of synthetic inorganic complexes with living systems and their components are an additional area of interest. These areas are linked by the need to involve researchers having a deep understanding of inorganic chemistry in medically relevant research. Much of the work is expected to involve collaborations including chemists, biologists, and medical researchers. The results will be relevant to understanding the mechanisms of metal handling by biological systems and the basic cellular roles underlying the nutritional requirement for essential metals. It is expected that this research will also contribute to the identification of new targets for drug discovery, diagnostics, and future therapeutic approaches involving metal complexes, although drug development, per se, is not a focus of the program.

Next Generation Genetic Association Studies (U01)

RFA-HL-11-006

National Heart, Lung, and Blood Institute (NHLBI)

This FOA issued by the National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health, encourages applications from institutions or organizations that propose to utilize cellular reprogramming, molecular profiling, and genomics to investigate functional aspects of genetic variation in humans. NHLBI is soliciting a phased technology development and implementation program whose goal is to add a functional dimension to genomic studies by combining cellular reprogramming strategies with molecular profiling or cellular assays, followed by integration of this information with existing genotypic and clinical phenotypic data to assess how naturally occurring human genetic variation influences the activities of biological networks in cell-based models of disease. Since the design and conduct

of such studies will require several areas of expertise, applicants are encouraged to include multiple PIs on the application. Mechanism of Support.

GPHRC Translational Research RFA

The Center for Clinical and Translational Research and Great Plains Health Research Consortium

UNMC's Center for Clinical and Translational Research (CCTR) has brought together regional institutions into a health research consortium, the "Great Plains Health Research Consortium" (GPHRC). The GPHRC has submitted a NIH Clinical and Translational Science Award (CTSA) proposal which hopes to speed research translation from "bench to bedside" and clinical trials into community-

wide applications. UNMC is sponsoring the first GPHRC Seed Grant program, with the primary intent being to bring together new research teams representing 2 or more GPHRC institutions to generate the pilot data needed to support a new extramural grant proposal within the next 1-3 years. Applications that address the health priority areas of the GPHRC as identified below will be given priority in review for this RFA:

- Health disparities including rural health disparities
- Cancer
- Obesity-Diabetes-Vascular Disease (inclusive of cardiovascular and all other types of vascular disease)
- Infectious Diseases
- Musculoskeletal Disease
- Neurologic and Psychobehavioral Disease
- Alcohol and Smoking Related Disease
- Transplantation

Amount: \$100,000

Translational Research for the Prevention and Control of Diabetes and Obesity (R18)

PAR-09-176

National Institute of Diabetes and Digestive and Kidney Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

Office of Behavioral and Social Science Research

The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD) and the Office of Behavioral and Social Sciences Research (OBSSR) encourage NIH Research Demonstration and Dissemination Project grant (R18) applications from institutions/ organizations to test the effectiveness of interventions for the prevention and control of diabetes and obesity that have a high potential to be adopted, and sustained in applied health care settings. The approaches tested must be based on widely accepted interventions previously demonstrated to be efficacious in clinical trials. Research must target the prevention or reversal of obesity, prevention of type 2 diabetes, improved care of type 1 and type 2 diabetes, or the prevention or delay of the complications of these conditions. The interventions proposed under this FOA should have the potential to be widely disseminated to clinical practice, individuals and communities at risk.

Amount: \$2,500,000

LOI: N/R

Deadline: July 1, 2010, November 1, 2010, March 1, 2011, July 1, 2011, November 1, 2011, March 1, 2012

Human Brown Adipose Tissue: Methods for Measurement of Mass and Activity (R21)

RFA-DK-10-002

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

This FOA issued by the National Institute of Diabetes and Digestive and Kidney Diseases and the National Institutes of Biomedical Imaging and Bioengineering, National Institutes of Health, solicits applications for Exploratory/Development Research Grants (R21) to develop tools and methods capable of measuring the mass of brown adipose tissue (BAT) in human populations (e.g. amounts in different depots, amounts mixed in with WAT and muscle); to develop new tools to modulate and measure the metabolic activity of human BAT, or to develop additional markers of human BAT tissue mass or activity.

Amount: \$275,000

LOI: October 13, 2010

Deadline: November 10, 2010

To learn more: <http://grants.nih.gov/grants/guide/rfa-files/RFA-DK-10-002.html>

Key Words: **BAT, Metabolic Activity, Brown Adipose Tissue**

NIDDK Education Program Grants (R25)

PAR-10-092

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Office of Dietary Supplements (ODS/NIH)

This funding opportunity announcement (FOA) encourages Research Education (R25) grant applications from applicant organizations that propose to create educational opportunities to attract undergraduate students, graduate students, and postdoctoral fellows to careers in areas of biomedical or behavioral research of particular interest to the NIDDK, while fostering the career development of these students and fellows. The NIDDK is especially interested in attracting students and postdoctoral fellows from scientific disciplines underrepresented in disease-oriented biomedical research, such as engineering, informatics, computer science, and computational sciences, to encourage them to apply their expertise to research relevant to diabetes and other endocrine and metabolic diseases; digestive and liver diseases; nutrition; obesity research and prevention; and kidney, urologic and hematologic diseases.

Amount: \$500,000

LOI: N/R

Deadline: March 26, 2010. Standard dates apply for the remaining cycles

NIDDK Small Grants for Clinical Scientists to Promote Diversity in Health-Related Research (R03)

PAR-09-223

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Office of Dietary Supplements (ODS)

The purpose of this funding opportunity announcement (FOA) is to provide support for clinical scientists from underrepresented racial/ethnic backgrounds, disadvantaged backgrounds or clinical scientists with disabilities to conduct small research projects in the area of diabetes, endocrinology, metabolism, digestive diseases, hepatology, obesity, nutrition, kidney, urology, or hematology. The NIDDK and the ODS recognize the need to promote diversity in the health-related workforce by increasing the number of highly trained clinical researchers from diverse backgrounds conducting research in areas of importance to the NIDDK. This FOA is aimed at New Investigators (see Section III.1.B. for definition) who hold a health professional doctoral degree or other clinical doctoral degree AND who are from a group that have been shown to be underrepresented in biomedical research (see eligible PD/PI for full definition). The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

Amount: \$375,000

Non-Invasive Methods for Diagnosis and Progression of Diabetes, Kidney, Urological, Hematological and Digestive Diseases and Hypertensive Disorders (R01)

PA-09-181

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart Lung and Blood Institute (NHLBI)

This Funding Opportunity Announcement (FOA) is a call for the application of imaging and other non- or minimally-invasive technologies to detect, characterize, diagnose, identify persons with predisposition to, or monitor treatment of diseases of interest to the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the National Heart Lung and Blood Institute (NHLBI) of the National Institutes of Health (NIH). Also needed are new, robust surrogate markers for clinical trial endpoints, and new ways to characterize normal and pathological tissues in vivo. Diseases of interest include type 1 and 2 diabetes; acute and chronic kidney disease, liver, urologic, hematologic, digestive, endocrine, and metabolic diseases and their complications; obesity; obesity-related hypertension, hypertension, renal and vascular disorders leading to hypertension. Applicable techniques include molecular imaging and functional imaging approaches, imaging methods with high spatial, chemical or time resolution, metabolomics, proteomics, genomics, or new spectroscopic or sensor array technologies for monitoring metabolic or physiological events.

Adherence Studies in Adolescents with Chronic Kidney or Urologic Diseases, or Diabetes (R01)

RFA-DK-10-004

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Adherence to a prescribed treatment regimen, including medications, devices and behavioral recommendations, can significantly impact morbidity and mortality for patients with chronic diseases, including chronic kidney or urologic disease and diabetes. When adherence to complex and seemingly rigid treatment regimens is poor, the results can be tragic. Adolescence can also be a particularly challenging time for adherence given the competing demands in an adolescents life, the unique developmental changes, and rapidly changing set of responsibilities as they transition to adulthood. There are few studies in pediatrics beyond the HIV literature that address non-adherence. The purpose of the FOA is to support research to improve adherence in adolescents with chronic kidney or urologic diseases, or diabetes. Therefore, the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) invites

applications from new or established investigators to pursue research to better understand factors that influence adherence, develop appropriate measures of adherence, and test innovative strategies to enhance adherence in this vulnerable population.

Amount: \$2,500,000

Research Experiences for Undergraduates (REU)

NSF-09-598

National Science Foundation (NSF)

The Research Experiences for Undergraduates (REU) program supports active research participation by undergraduate students in any of the areas of research funded by the National Science Foundation. REU projects involve students in meaningful ways in ongoing research programs or in research projects specifically designed for the REU program. This solicitation features two mechanisms for support of student research: (1) REU Sites are based on independent proposals to initiate and conduct projects that engage a number of students in research. REU Sites may be based in a single discipline or academic department, or on interdisciplinary or multi-department research opportunities with a coherent intellectual theme. Proposals with an international dimension are welcome. A partnership with the Department of Defense supports REU Sites in DoD-relevant research areas. (2) REU Supplements may be requested for ongoing NSF-funded research projects or may be included as a component of proposals for new or renewal NSF grants or cooperative agreements.

Undergraduate student participants in either Sites or Supplements must be citizens or permanent residents of the United States or its possessions.

Alcohol Research Education Project Grants (R25)

PAR-08-082

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

The National Institute on Alcohol Abuse and Alcoholism (NIAAA) supports research programs to advance understanding of the biological and behavioral processes involved in the development, expression, and consequences of alcoholism and other alcohol-related problems. The Institute also supports prevention, treatment, and health services research on alcohol abuse and alcoholism. A part of the NIAAA mission is the dissemination of new knowledge acquired from alcohol research to diverse audiences, including scientists, educators, clinicians, and other health and social service providers, patients and their families, professionals within the criminal justice system, and the general public. This FOA identifies the research activity on alcohol education of Health Professions that NIAAA will consider for award through Research Education grants (R25).

Amount: \$500,000

NINDS Diversity Research Education Grants in Neuroscience (R25)

PAR-07-456

National Institute of Neurological Disorders and Stroke (NINDS)

The NINDS Research Education Grant is a flexible and specialized mechanism designed to foster the development of neuroscience researchers through creative and innovative educational programs. Programs are sought that focus on preparing researchers in cross-disciplinary integration of neuroscience, including basic, translational, behavioral, prevention, clinical, and treatment research. Of particular interest are educational experiences that will attract, train, and further the career development of underrepresented biomedical scientists to improve the diversity of the research workforce relevant to the mission of NINDS. The NIH expects efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups.

Amount: \$1,250,000

LOI: Nonrequired letters of intent may be sent 30 days prior to the application submission date.

Deadline: standard dates apply

NIAID Science Education Awards (R25)

PAR-08-003

National Institute of Allergy and Infectious Diseases (NIAID)

This Funding Opportunity Announcement (FOA) solicits applications from organizations that propose creative and innovative research education programs that will increase the public's understanding of biomedical research, or encourage K-12 students to enter areas in biomedical science in the mission areas of the NIAID. The NIH Research Education (R25) grant mechanism is a flexible and specialized mechanism designed to foster the development of biomedical, behavioral, and clinical researchers through creative and innovative research education programs.

The overall goals of the NIAID's research education programs are to ensure that highly trained scientists will be available in adequate numbers and in appropriate scientific areas to address the nation's biomedical, behavioral, and clinical research needs in the NIAID mission areas and to provide public education and outreach on NIH-funded research to a variety of audiences.

NIAID accepts R25 applications that provide training and curriculum development for K-12 teachers and students using innovative approaches and broad outreach at a national level. The applicant organization should determine the nature of the program, state the specific goals for the program, and define specific measurable objectives. The NIH encourages all proposed programs to foster the participation of individuals from racial and ethnic groups underrepresented in biomedical and behavioral research, individuals from disadvantaged backgrounds, individuals with disabilities, and women.

IDeA Networks of Biomedical Research Excellence (INBRE) [P20]

PAR-08-150

National Center for Research Resources (NCRR)

The National Center for Research Resources (NCRR) of the National Institutes of Health (NIH) invites applications for competing continuation of Institutional Development Award (IDeA) Networks of Biomedical Research Excellence (INBRE) grants to independent biomedical research institutes and/or biomedical research institutions that award doctoral degrees in the health sciences or sciences related to health within IDeA-eligible states. INBRE applications must represent a collaborative effort to sponsor research with

undergraduate institutions, community colleges, and tribal colleges and universities (TCUs). The size, structure, and operational principles of the INBRE networks have been established during previous INBRE and the planning phase of INBRE project periods. The competitive renewal application should describe progress and accomplishments made to achieve the goals of the statewide research network. -This Funding Opportunity Announcement (FOA) is to provide an opportunity to build on the successes of the current INBRE to augment and strengthen the state's biomedical research capacity. The objectives of INBRE program are to: 1) continue to build on the established multi-disciplinary research network with a scientific focus to strengthen the lead and partner institutions' biomedical research expertise and infrastructure; 2) build and increase the research base and capacity by providing support to faculty, postdoctoral fellows and graduate students at the participating institutions; 3) provide research opportunities for students from undergraduate institutions, community colleges and TCUs and serve as a "pipeline" for these students to continue in health research careers within IDeA states; 4) enhance science and technology knowledge of the state's workforce.

Amount: \$7,500,000

Notice of Intent to Publish a Funding Opportunity for the Reissue of RFA-TW-08-002 the International Research Ethics Education and Curriculum Development Award (R25)

NOT-TW-10-326

Fogarty International Center (FIC)

The John E. Fogarty International Center (FIC) intends to issue a Funding Opportunity Announcement (FOA) that is a reissue of RFA-TW-08-002 to encourage applications for the International Research Ethics Education and Curriculum Development Award (R25). This notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive proposals. This FOA is expected to be published in early April 2010 with an anticipated receipt date of early June 2010. The FOA will utilize the NIH Research Education (R25) grant mechanism. Details of the planned FOA are provided below.

Purpose

This FOA issued by the Fogarty International Center at the National Institutes of Health requests Research Education Grant (R25) applications from institutions/organizations that propose to develop masters level curricula and provide educational opportunities for developing country academics, researchers and health professionals in ethics related to performing research involving human subjects in international resource poor settings.

NIOSH Support for Conferences and Scientific Meetings (R13)

PAR-08-072

Centers for Disease Control and Prevention

CDC's Procurement and Grants Office has published a funding opportunity announcement entitled, "NIOSH Support for Conferences and Scientific Meetings(R13)." The purpose of the program is to support high quality conferences/scientific meetings that are relevant to its scientific mission and to the public health.

The goal of the NIOSH research program is to develop an understanding of the risks and conditions that are associated with occupational diseases and injuries, to explore methods for reducing risks and for preventing or minimizing exposure to hazardous conditions in the workplace, and to translate significant scientific findings into prevention practices and products that will effectively reduce work-related illnesses and injuries. Specific research priorities are derived from the National Occupational Research Agenda (NORA) which is used by NIOSH for determining how best to carry out its mission of providing national and world leadership in preventing work-related illnesses and injuries.

Amount: \$20,000

LOI: Sixty calendar days in advance of standard Application

Deadline: Standard dates apply (April 12, August 12, December 12)

Recovery Act Limited Competition: The NIH Director's ARRA Funded Pathfinder Award to Promote Diversity in the Scientific Workforce (DP4)

RFA-OD-10-013

All NIH Institutes and Centers participate in this NIH-wide announcement.

This NIH Funding Opportunity Announcement (FOA), supported by funds provided to the NIH under the American Recovery and Reinvestment Act of 2009 (Recovery Act or ARRA), Public Law 111-5, invites applications for the NIH Directors ARRA Pathfinder Award to Promote Diversity in the Scientific Workforce. The NIH recognizes a unique and compelling need to promote diversity in the biomedical, behavioral, clinical and social sciences research workforce. The NIH expects all of its efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups; to improve the quality of the educational and training environment; to balance and broaden the perspective in setting research priorities; to improve the ability to recruit subjects from diverse backgrounds into clinical research protocols; and to improve the Nation's capacity to address and eliminate health disparities. This new FOA introduces a new research grant program to encourage exceptionally creative individual scientists to develop highly innovative and possibly transforming approaches for promoting diversity within the biomedical research workforce. To be considered highly innovative, the proposed research must reflect ideas substantially different from those already being pursued or it must apply existing research designs in new and innovative ways to unambiguously identify factors that will improve the retention of students, postdocs and faculty from diverse backgrounds. Awardees must commit a major portion (generally 30% or more) of their research effort to activities supported by the Directors Pathfinder Award and the proposed research must be endorsed by the highest levels of institutional management.

Amount: \$2,000,000

LOI: April 5, 2010

Deadline: May 4, 2010

Improving Patient Safety through Simulation Research (R18)

RFA-HS-10-018

Agency for Healthcare Research and Quality (AHRQ)

Center for Outcomes and Evidence (COE)

The Agency for Healthcare Research and Quality (AHRQ) is interested in funding a diverse set of projects that develop, test and evaluate various simulation approaches for the purpose of improving the safe delivery of health care. Simulation in health care predominately is a training technique that exposes individuals and teams to realistic clinical challenges through the use of mannequins, task trainers, virtual reality, or standardized patients, and allows participants to experience in real-time the consequences of their decisions and actions. The principal advantage of simulation is that it provides a safe environment for health care practitioners to acquire valuable experience without putting patients at risk. Simulation also can be used as a test-bed to improve clinical processes and to identify failure modes or other areas of concern in new procedures and technologies that might otherwise be unanticipated and serve as threats to patient safety. Applications that address a variety of clinical settings are sought.

Amount: \$1,050,000

Collaborative Research on the Transition From Acute to Chronic Pain: New Models and Measures in Clinical and Preclinical Pain Research (R01)

RFA-DE-11-001

National Institute of Dental and Craniofacial Research (NIDCR)

The overall goal of this FOA is to stimulate preclinical and clinical research that will accelerate our understanding of the biological and behavioral determinants driving the transition from acute pain to chronic pain disorders. An understanding of the mechanisms and risk factors that determine who will transition to a chronic pain state is necessary in order to intervene in this transition and to design new, effective treatments to resolve acute pain before it becomes chronic. The objectives of this FOA are to: 1) assemble research teams with expertise in basic and clinical pain research and related expertise outside the pain field that will provide novel, collaborative, multidisciplinary approaches to answer crucial questions about the transition from acute to chronic pain; 2) discover biological and behavioral mechanisms that drive the transition from an acute pain state to a chronic dysfunctional pain condition; 3) develop new clinical and preclinical models and measures of pain that will be essential to identify and characterize these mechanisms. Studies that involve considerable risk but with the potential for breakthroughs in the field are strongly encouraged.

USA Medical Research and Materiel Command Broad Agency Announcement

W81XWH-BAA10-1

Department of Defense (DOD)

This Announcement provides a general description of the Command's research programs, including specific areas of interest; general information; the evaluation and selection criteria; and proposal preparation instructions.

- 1) The Military Infectious Diseases Research Program (MIDRP) focuses on vaccines, antiparasitic drugs, deployable field clinical diagnostics, and vector control pertinent to naturally-occurring endemic diseases with demonstrated or potential capability to decrease military operational effectiveness.
- 2) The Combat Casualty Care Research Program (CCCRP) provides integrated capabilities for far-forward medical care to reduce the mortality and morbidity associated with major battlefield wounds and injuries.
- 3) The Military Operational Medicine Research Program (MOMRP) provides biomedical solutions that protect Soldiers and enhance their performance in operational and training environments that include multiple stressors. [a. Injury Prevention and Reduction; b. Psychological Health and Resilience; c. Environmental Health and Protection; d. Physiological Health]
- 4) The Medical Biological Defense Research Program provides medical countermeasures for biological warfare agents. These countermeasures include specialized medical materiel or procedures designed to enhance protection.
- 5) The Medical Chemical Defense Research Program seeks to preserve combat effectiveness by timely provision of medical countermeasures in response to Joint Service chemical warfare defense requirements.
- 6) The Clinical and Rehabilitative Medicine Research Program (CRMRP) focuses on the innovations required to reset our wounded warriors, both in terms of duty performance and quality of life. The CRMRP focuses its efforts on the following five research areas: neuromusculoskeletal injury (including amputees), ocular and visual system injury, hearing and vestibular systems injury, chronic pain, and regenerative medicine.

Major Research Instrumentation Program

NSF 10-529

National Science Foundation (NSF)

The Major Research Instrumentation Program (MRI) serves to increase access to shared scientific and engineering instruments for research and research training in our Nation's institutions of higher education, museums, science centers, and not-for-profit organizations. This program especially seeks to improve the quality and expand the scope of research and research training in science and engineering, by providing shared instrumentation that fosters the integration of research and education in research-intensive learning environments. Development and acquisition of research instrumentation for shared inter- and/or intra-organizational use are encouraged, as are development efforts that leverage the strengths of private sector partners to build instrument development capacity at academic institutions.

To accomplish these goals, the MRI program assists with the acquisition or development of shared research instrumentation that is, in general, too costly and/or not appropriate for support through other NSF programs. Instruments are expected to be operational for regular research use by the end of the award period. For the purposes of the MRI program, proposals must be for either acquisition or development of a single instrument or for equipment that, when combined, serves as an integrated research instrument (physical or virtual). The MRI program does not support the acquisition or development of a suite of instruments to outfit research facilities or to conduct independent research activities simultaneously.

Amount: \$100,000-\$4,000,000

NIH Exploratory Developmental Research Grant Program (Parent R21)

PA-10-069

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Exploratory/Developmental Grant (R21) funding opportunity supports the development of new research activities in categorical program areas. (Support generally is restricted in level of support and in time.) Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated exploratory/developmental applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The Exploratory/Developmental Grant (R21) mechanism is intended to encourage exploratory and developmental research projects by providing support for the early and conceptual stages of these projects. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research.

Amount: \$275,000

Improving Intervention Possibilities for Communication Disorders (R21/R33)

PAR-09-056

PAR-09-057

National Institute on Deafness and Other Communication Disorders (NIDCD)

This Funding Opportunity Announcement (FOA), issued by the National Institute on Deafness and Other Communication Disorders (NIDCD), is a companion FOA to PAR-09-057, Improving Interventions for Communication Disorders, which supports the development of new efficacious interventions for communication disorders. The goal of the present FOA is to identify and develop new methodologies and insights into the basic biology of the communication sciences that will have the future potential for clinical and translational application but which are still at the preliminary exploratory stage. The research design will be milestone-driven and basic science in nature but the research plan must be focused on some clinical or translational problem related to communication disorders. Projects will necessarily have an uncertain outcome but must have a realistic expectation to yield enhanced diagnostic, intervention and treatment tools, or paradigms with widespread, cost-effective application in the NIDCD mission areas of hearing, balance, smell, taste, voice, speech and language. Basic science studies intended to explore some aspect of the biology of the communication sciences with no focus on future interventions and translational research are not appropriate. This FOA uses the R21/R33 grant mechanism and requires a separate statement that describes anticipated milestones and justifies the future translational potential of the proposed studies. Clinical and patient-oriented research is not appropriate.

Amount: \$1,750,000

Proteomics in Auditory Developmental and Disease Processes (R21)

PA-10-078

National Institute on Deafness and Other Communication Disorders (NIDCD)

The following examples are not meant to be comprehensive or restrictive, but rather represent projects relevant to the auditory system. Examples of projects responsive to this FOA include but are not limited to:

Proteomic analysis of specific cell types of the inner ear, other auditory pathways, and/or their subcellular structures.

Proteomic analysis of specific otocyst cell/tissue types through a variety of developing stages.

Comparative analysis between proteome and transcriptome of a defined auditory cell and/or tissue type; comparative determination between proteomic and transcriptome results.

Comparative analysis of infection state in middle ear tissue, cell type, in response to invasion with otitis media pathogens; comparative proteomic analysis of infectious pathogens involved in middle ear infections upon biofilm or infection stimulus.

Proteomic analysis of auditory genetic disorders, presbycusis, environmental noise or drug trauma; biological and/or clinical in design.

Proteomic analysis of native purified and/or in vitro propagated cultures of putative auditory progenitor cells; comparative studies of transdifferentiated/induced auditory cells and subtypes.

Use of proteomic approaches to study the signal transduction networks related to transcription factors, cell surface receptors, growth factors, and other biomarkers relevant to auditory development.

Proteomic identification of novel signaling molecules and pathways involved in cell development, differentiation, communication, function and destruction, as applied to auditory signaling processes.

Development of novel proteomic bioinformatics for annotating genomic and protein sequence information for auditory function.

Amount: \$275,000

Structural Analyses of the Ligand-Binding Properties of Taste and Smell Receptors (R01)

PA-09-058

National Institute on Deafness and Other Communication Disorders (NIDCD)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Deafness and Other Communication Disorders (NIDCD), encourages grant applications from institutions/organizations designed to foster innovative collaborative research to characterize the structural properties of taste and smell receptors. Additional emphasis is placed on the characterization of the interactions among odors, pheromones, and taste substances with their cognate receptors, and the identity of the critical ligand-receptor binding sites that determine sensitivity and selectivity. One aim of this FOA is to encourage collaborations among chemosensory molecular biologists and biochemists with expertise in the isolation and characterization of membrane proteins, and biophysicists familiar with crystallography, NMR and other analytical tools used in structural analyses.

NEI Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Research Training Grants (T32) for Statistical Genetics and Genome Informatics

RFA-EY-10-001

National Eye Institute (NEI)

The NEI Institutional Research Training Grants (T32) for Statistical Genetics and Genome Informatics is a Ruth L. Kirschstein National Research Service Award program that is intended to support predoctoral and postdoctoral training at institutions having the potential to develop meritorious training programs in genomic medicine, computational genomics, and statistical genetics. The goal of this program is to initiate a training program to develop ophthalmic statistical genetics and bioinformatics research skills critical for investigators seeking to identify genes and genetic variations underlying ocular diseases. This training program is designed to attract individuals in early career stages, in order to increase their knowledge and awareness of research in the genetics of ophthalmic disorders, and to encourage them to pursue research career opportunities in these scientific fields. Such training will help meet a growing need for investigators trained in computational genomics related to basic biomedical, clinical, and translational ophthalmic research.

Amount: \$1,500,000

NEI Clinical Study Planning Grant Program (R34)

PAR-10-017

National Eye Institute (NEI)

The National Eye Institute (NEI) supports large-scale clinical vision research projects, including randomized clinical trials and epidemiologic studies. At the time of submission, applications requesting support for these activities are expected to provide detailed information regarding the study's rationale, design, analytic techniques, protocols and procedures, facilities and environment,

organizational structure, and collaborative arrangements. This information is best conveyed in a well-documented Manual of Procedures (MOP), the development of which represents a costly and time-consuming activity. The Clinical Study Planning Grant is designed to facilitate activities central to the refinement of a study's protocol and procedures and the development of a detailed MOP. The NEI Clinical Study Planning Grant may be used to support the development of a MOP, as well as to conduct preliminary studies to refine study procedures and/or assess recruitment potential. The Clinical Study Planning Grant is applicable to both epidemiologic and clinical trial research studies.

Healthy Eating Research: Building Evidence to Prevent Childhood Obesity

Robert Wood Johnson Foundation (RWJF)

Healthy Eating Research is a national program of the Robert Wood Johnson Foundation (RWJF). The program supports research on environmental and policy strategies with strong potential to promote healthy eating among children to prevent childhood obesity, especially among lower-income and racial and ethnic populations at highest risk for obesity. Findings are expected to advance RWJF's efforts to reverse the childhood obesity epidemic by 2015.

The three types of funding opportunities included in this call for proposals (CFP) are Round 5 grants, rapid-response grants and New Connections grants through Healthy Eating Research. The broad topics and types of studies are described in the complete CFP.

Amount: \$up to \$170,000

Women's Mental Health in Pregnancy and the Postpartum Period (R01)

PA-09-174 and PA-09-175

National Institute of Mental Health (NIMH)

Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD)

National Institute on Drug Abuse (NIDA)

Center for Primary Care, Prevention, and Clinical Partnerships (CP3)

In this Funding Opportunity Announcement (FOA), the National Institute of Mental Health (NIMH), the National Institute on Drug Abuse (NIDA), the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), and the Agency for Healthcare Research and Quality, encourage research on women's mental health in relation to pregnancy and the postpartum period. As illustrated by a few highly publicized cases, the consequences of severe untreated postpartum depression and psychosis can be devastating for individuals, families, and communities. A recent evidence-based practice report from the Agency for Healthcare Research and Quality noted that depression is also prevalent during pregnancy as well as the postpartum period, therefore research that occurs throughout pregnancy and the postpartum period (the perinatal period) is encouraged.

Home and Family Based Approaches for the Prevention or Management of Overweight or Obesity in Early Childhood (R21) and (R01)

PA-10-128 and PA-10-127

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart, Lung and Blood Institute (NHLBI)

Office of Behavioral and Social Sciences Research (OBSSR)

Office of Disease Prevention (ODP)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Heart, Lung and Blood Institute (NHLBI), the Office of Behavioral and Social Sciences Research (OBSSR) and the Office of Disease Prevention (ODP), National Institutes of Health, invites exploratory pilot/feasibility study and small clinical trial (R21) applications from institutions/organizations that propose to test novel home or family based interventions for the prevention or management of overweight in infancy and early childhood. Tested interventions can use behavioral (including dietary and physical activity), environmental, or other relevant approaches. Applications should focus on infants and young children (to age six years) and emphasize the role of home environment and the influence of family/extended family members and parents (including guardians/substantial care-providers) within the child's home environment. The direct goal of this initiative is to fund research that will advance knowledge for innovative approaches to the prevention or management of overweight in children less than 6 years of age, with potential for future research clinical trial applications either in the home or linked to a community setting. Research should consider the role of families in the initiation, support, and reinforcement of fundamental food and beverage consumption, physical activity practices, and sedentary behaviors. In addition it is of interest to elucidate various underlying behavioral determinants that are crucial to initiate or sustain changes in behaviors that impact energy balance. Research designs may include linkages with other settings (e.g., daycare, pre-school, or other community venues) or other care providers (e.g., health care providers or teachers) but must include infants or children less than age six years as the primary study participant along with parents, and/or other family members residing with the child. The overarching goal is to identify interventions that influence parent and child behaviors that contribute to inappropriate weight gain, and thereby improve subsequent health status in childhood, adolescence, and adulthood for which overweight is a known risk factor.

Adherence Studies in Adolescents with Chronic Kidney or Urologic Diseases, or Diabetes (R01)

RFA-DK-10-004

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Adherence to a prescribed treatment regimen, including medications, devices and behavioral recommendations, can significantly impact morbidity and mortality for patients with chronic diseases, including chronic kidney or urologic disease and diabetes. When adherence to complex and seemingly rigid treatment regimens is poor, the results can be tragic. Adolescence can also be a particularly challenging time for adherence given the competing demands in an adolescents life, the unique developmental changes, and rapidly changing set of responsibilities as they transition to adulthood. There are few studies in pediatrics beyond the HIV literature that address non-adherence. The purpose of the FOA is to support research to improve adherence in adolescents with chronic kidney or urologic diseases, or diabetes. Therefore, the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) invites applications from new or established investigators to pursue research to better understand factors that influence adherence, develop appropriate measures of adherence, and test innovative strategies to enhance adherence in this vulnerable population.

Genomics

Stress Pathways in Alcohol Induced Organ Injury and Protection (R01) and (R21)

New

PA-10-093 and PA-10-094

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose studying the role of cellular stress responses, the cytoplasmic classical stress response or heat shock response (HSR) and the endoplasmic reticulum (ER) stress, in alcohol-induced tissue injury and tissue protection. While excessive alcohol use causes organ damage, moderate alcohol consumption may be beneficial. The underlying molecular mechanisms for this apparent dichotomy of alcohol's harmful and salutary effects are currently not fully understood. Alcohol induces cellular stress pathways in the cytoplasm and in the endoplasmic reticulum that may significantly be involved in alcohol-induced tissue injury or mediate tissue protection depending on the quantity, frequency, duration, and temporal pattern of drinking. Hence, studies of the effects of alcohol on cellular stress pathways are critical to understand the mechanisms of alcohol-induced injuries or protection to develop new strategies for prevention, diagnosis and treatment. The purpose of this FOA is to: (1) acquire insight into how acute or chronic alcohol consumption affects cellular stress pathways and in turn, how these changes contribute to alcohol-induced injury/protection; (2) investigate how alcohol induced stress responses mediate cell survival and death signaling pathways at macromolecular, organelle, cellular and organism level contributing to alcohol-induced tissue injury/protection; (3) develop potential stress related biomarkers for prognosis, diagnosis of tissue injury/protection, furthermore identify new targets for their therapeutic interventions. Utilizing innovative experimental design and emerging technologies, such as deep sequencing, genomics, proteomics, metabolomics, bioinformatics, and novel imaging techniques these investigations are expected to provide a more comprehensive understanding of how alcohol affects the evolutionally conserved stress pathways and elucidate their roles in tissue injuries and repair.

The Role of Cellular Organelles in Alcohol-Induced Tissue Injury (R01) and (R21)

New

PA-10-085 and PA-10-086

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Alcohol Abuse and Alcoholism, National Institutes of Health, encourages Research Project Grant (R01) applications that propose to study biological processes involving the cellular organelles in alcohol-induced tissue injury. Excessive alcohol consumption can damage many organ systems including the liver, heart, pancreas, brain, and lung. However, the mechanisms for these injuries are currently not fully understood. Cellular organelles play an important role in cellular functions and are significantly involved in alcohol-induced tissue injury. Thus, studies of alcohol's effects on the structure and function of cellular organelles are critical to better understand the mechanisms of alcohol-induced injuries and to develop new strategies for their diagnosis and treatment. The purpose of this FOA is to: (1) better understand how acute or chronic alcohol consumption affects the structure and function of cellular organelles, and in turn, how these changes contribute to alcohol-induced injury; (2) investigate how variations of proteins in cellular organelles, or their regulation and function, including cellular signaling pathways, contribute to an individual's response to acute or chronic alcohol intake and alcohol-induced tissue injury; (3) develop potential biomarkers for prognosis and diagnosis of tissue injury, or identify new targets for therapeutic interventions. This FOA aims to foster the utilization of innovative experimental design and emerging technologies, such as genomics, proteomics, metabolomics, bioinformatics, as well as novel microscopic imaging techniques that illuminate functions in intact cells and tissues, to generate new mechanistic and clinical insights into alcohol-induced tissue injuries.

Genetic Susceptibility and Variability of Human Structural Birth Defects (R01)

PA-08-011

NICHHD, NIDCR, NIEHS

This Funding Opportunity Announcement (FOA) encourages innovative investigator-initiated applications designed to study fundamental developmental processes using animal models in conjunction with translational/clinical approaches with the goal of advancing our understanding of the etiology of structural birth defects. In 2000, the Developmental Biology, Genetics and Teratology Branch at NICHD began its Birth Defects Initiative with the funding of a number of research grants and program projects focused on the use of molecular genetic approaches for the study of genetic susceptibility, epidemiology, and developmental biology of human congenital structural malformations. These grants established the basis for a working group of investigators, who meet annually to present research updates, share ideas and technical advances, establish new collaborations, and provide input and advice to NICHD staff. Applicants funded through this FOA will join the NICHD's Birth Defects Special Interest Group and participate in annual meetings designed to provide a forum to discuss research progress, exchange ideas, share resources, and foster collaborations relevant to the goals of the NICHD's Birth Defects Initiative.

National Heart Lung and Blood Institute (NHLBI)

This FOA seeks to establish a pilot-scale data production effort to systematize approaches for identifying mechanism-based associations among the effects of disparate biological perturbations, a knowledge base that can be used to study functional relationships among the responding cellular components. The Library of Integrated Network-Based Cellular Signatures (LINCS) program will support the high-throughput collection and integrative computational analysis of informative molecular activity and cellular feature signatures generated in response to a variety of perturbing agents, including siRNAs and small bioactive molecules, which are applied to a set of carefully selected cell types. The resulting knowledge will form the basis of a long-lived resource that can be used broadly by the community. For example LINCS may inform association of disease states with detailed molecular or cellular phenotypes, and ultimately associate disease with specific gene networks, or inform the mechanism of action of known drugs. This FOA seeks to fund pilot-scale data production efforts that will produce a usable initial resource while addressing the following issues: optimization of methods, integration of data, and scalability. Pilot production efforts will interact with multiple future additional components (data analysis and informatics tools; and development and integration of new production-ready technologies) of the LINCS program.

Amount: \$4,200,000

LOI: April 1, 2010

NIH Small Research Grant Program (Parent R03)

PA-10-064

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Investigator-Initiated Small Grant (R03) funding opportunity supports small research projects that can be carried out in a short period of time with limited resources. Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated small grant applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

Genetic Epidemiology of Substance Use Disorders (R03)

PA-07-414

National Institutes of Health (NIH)

The National Institute on Drug Abuse (NIDA) and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) seek to stimulate and expand research applying genetic epidemiologic methods to studies of substance and alcohol use disorders (SUDs/AUD, drug or alcohol abuse and dependence). Previous studies using twin, adoption, and family approaches indicate that genetic factors substantially contribute to the vulnerability to SUDs/AUD. Shared environmental factors have also been shown strongly to influence risk, particularly for the onset of substance and alcohol use, while heritability estimates generally rise with age and with progression from substance use to disorder. Significant advances have been made in our understanding of the developmental nature of the onset and progression of SUDs/AUD and in defining a disinhibited phenotype. Building on these findings, new studies are needed to apply genetic epidemiologic approaches to advance our understanding of a variety of developmental trajectories of SUD/AUD; integrate as well as differentiate genetic, environmental, and developmental factors in the onset and maintenance of SUD/AUD; broaden and refine phenotypic definitions of SUDs/AUD; guide the translation of etiologic findings to treatment, prevention, gene-finding and molecular studies; and meet the methodologic challenges of the field.

PA-06-468/PA-08-226

National Institutes of Health (NIH)

The objective of the National Research Service Award (NRSA) program is to provide predoctoral and postdoctoral research training opportunities for individuals interested in pursuing research careers in biomedical, behavioral and clinical research. Each NIH Institute and Center has a unique scientific purview and different program goals and initiatives that evolve over time. It is therefore critical that all applicants consult with the scientific/research contact at the relevant NIH Institute or Center for current information about program priorities and policies before preparing an application. This action is of utmost importance because applications with marginal or no relevance to the NIH awarding components participating in this funding opportunity announcement will not be accepted for review or considered for funding.

Deep Sequencing and Analysis of Pharmacogenomic Regions: Discovery and Analysis of Genetic Variants Contributing to Drug Abuse and Addiction (R01)

RFA-DA-10-019

National Institute on Drug Abuse (NIDA)

Genome-wide association studies (GWAS) have been critical for identifying genomic regions associated with addiction phenotypes, and have highlighted several areas that require further refinement using deep sequencing approaches. The goal of this FOA is to support studies proposing to use next-generation sequencing technologies to identify the structural variants and SNP variants with rare to moderate frequencies that affect addiction risk in well-characterized samples with drug abuse phenotypes. Applications may propose strategies for deep sequencing based on family based designs; deep sequencing of regions identified by GWAS to be associated with addiction risk; sequencing candidate genes in individuals with extreme phenotypes; or other analytic approaches that capitalize on the genetic architecture. Applicants must use existing DNA samples with appropriately obtained consents for broad data sharing.

Proteomics in Auditory Developmental and Disease Processes (R21)

PA-10-078

National Institute on Deafness and Other Communication Disorders (NIDCD)

The following examples are not meant to be comprehensive or restrictive, but rather represent projects relevant to the auditory system.

Examples of projects responsive to this FOA include but are not limited to:

Proteomic analysis of specific cell types of the inner ear, other auditory pathways, and/or their subcellular structures.

Proteomic analysis of specific otocyst cell/tissue types through a variety of developing stages.

Comparative analysis between proteome and transcriptome of a defined auditory cell and/or tissue type; comparative determination between proteomic and transcriptome results.

Comparative analysis of infection state in middle ear tissue, cell type, in response to invasion with otitis media pathogens; comparative proteomic analysis of infectious pathogens involved in middle ear infections upon biofilm or infection stimulus.

Proteomic analysis of auditory genetic disorders, presbycusis, environmental noise or drug trauma; biological and/or clinical in design.

Proteomic analysis of native purified and/or in vitro propagated cultures of putative auditory progenitor cells; comparative studies of transdifferentiated/induced auditory cells and subtypes.

Use of proteomic approaches to study the signal transduction networks related to transcription factors, cell surface receptors, growth factors, and other biomarkers relevant to auditory development.

Proteomic identification of novel signaling molecules and pathways involved in cell development, differentiation, communication, function and destruction, as applied to auditory signaling processes.

Development of novel proteomic bioinformatics for annotating genomic and protein sequence information for auditory function.

Prioritizing Molecular Targets for Cancer Prevention with Nutritional Combinations (R01)

PA-10-035

National Cancer Institute (NCI)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), invites research applications to enhance our understanding about the dynamic interrelationship that exists between bioactive food components (and/or combinations thereof) and cancer prevention. Although much evidence exists that dietary components are linked to cancer prevention, the interactions among dietary bioactive compounds and food combinations remains under-investigated. Applications are encouraged to consider either multiple dietary bioactive components, intact foods or multiple foods utilizing physiologically relevant concentrations of the agents. New genetic technologies may be employed to study the impact of dietary components on complex cellular and molecular networks, as part of the effort to better understand the basis for the multifaceted interactions of food components with cancer prevention mechanisms. Specifically, applications that apply new high-throughput genomic, epigenomic, proteomic, and metabolomic technologies to prioritize molecular targets of dietary components are highly encouraged. The sites of action that may be evaluated include carcinogen metabolism, DNA repair, cell proliferation, apoptosis, differentiation, hormonal regulation, energetics, inflammation, and/or angiogenesis. In addition, applications should either evaluate multiple molecular targets within a cancer process or multiple processes in order to prioritize which process(es) is/are most involved in bringing about a phenotypic change. It is hoped that advances in this area may assist in optimizing cancer prevention while minimizing potential toxicity due to food components. The resulting information will help define which foods or food components should be considered in isolation or in combination when developing dietary strategies to reduce cancer risk and/or modify tumor behavior.

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), encourages research applications that propose to evaluate profiles of methylation, histone modifications and micro RNA (miRNA) and their association with risk of developing cancer in different populations. The overarching goal of this FOA is to provide support for population based studies to define the role of epigenetic markers (methylation, histone and micro RNA profiles) changes to understand cancer etiology.

Strategic Partnering to Evaluate Cancer Signatures [SPECS II] (U01)

PAR-10-126

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI) of the National Institutes of Health (NIH), encourages the submission of grant applications for support of the clinical application of multi-analyte molecular signatures derived from comprehensive molecular annotation of tumors. There is growing recognition in the clinical cancer research community that annotation of tumor specimens with data that integrates information about molecular alterations at the levels of DNA, RNA, and protein provides not only a more complete understanding of tumor biology but also provides a significant opportunity for developing new clinical tools to improve cancer treatment. Translating the knowledge gained from this molecular annotation into tools that can be used in clinical decision-making remains a major challenge. The purpose of this initiative is to build on recent demonstrations that molecular signatures correlate with important clinical parameters in cancer. The goal of this initiative is also to create publications and data sets that will be available and accessible to the scientific community in order to further the development, design, and conduct of future clinical trials (e.g., incorporation of molecular signatures into future clinical trials and large clinical validation studies) and to encourage appropriate commercialization to benefit the public health. The NCI invites investigators to form strategic partnerships that will bring together the multi-disciplinary expertise and resources needed to determine how the information derived from comprehensive molecular analyses can be used to improve patient care and, ultimately, patient outcomes.

DoD Tuberos Sclerosis Complex Career Transition Award

W81XWH-10-TSCRCP-CARTA

DOD

Congressionally Directed Medical Research Programs (CDMRP)

The CARTA supports TSC researchers during the transition from postdoctoral training to an independent position. This award will cover up to two years of postdoctoral training followed by up to two years of a faculty-level position. Under this award mechanism, the postdoctoral candidate is considered the Principal Investigator (PI). DOD FY10 Tuberos Sclerosis Complex Career Transition Award 3 Important aspects of this award are as follows: • The award covers the last two years of a postdoctoral fellowship and the first two years of an independent faculty position. • Career transition and development plans must be clearly articulated. • A mentor must be named who will support and guide the PI during the postdoctoral period of the award. • All applications must include preliminary data relevant to TSC research and the proposed project. Clinical trials are not allowed under this award mechanism. PIs wishing to apply for funding for a clinical trial should utilize the Clinical Research Award mechanism.

Prostate Cancer Research Program Impact Award

W81XWH-10-PCRIP-IA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

This award will support research projects specifically focused on making a major impact on one critical issue in prostate cancer: Reducing or eliminating the over-treatment of primary prostate cancer. Projects funded by this award will, if successful, ultimately change the standard of practice for decision-making in the treatment of primary prostate cancer. Studies conducted under the Impact Award may involve the development of surveillance mechanisms, including improvements in current clinical and diagnostic tools to monitor prostate cancer patients. Proposed projects may include basic, translational, or clinical research, including clinical trials, provided the overall project is hypothesis-based and focused on the problem of prostate cancer over-treatment. Applications for the PCRIP Impact Award should also address at least one of the following FY10 PCRIP focus areas:

Biomarkers

Genetics

Imaging

Basic and Applied Scientific Research

W911NF-07-R-0003-02

ARMY RESEARCH OFFICE

8.2 Molecular Genetics and Genomics. This program emphasizes basic research in molecular genetics and genomics that will enable optimization of soldier cognitive and physical performance, soldier protection, and Army logistics. This includes human performance and protection under both normal conditions, and when affected by a variety of stressors that are likely to be encountered in battlefield situations, such as dehydration, heat, cold, sleep deprivation, fatigue, caloric insufficiency, microbial factors, and psychological stress. Genetic and genomic research areas include identification and characterization of gene function, gene regulation, genetic interactions, gene pathways, gene expression patterns, mitochondrial regulation and biogenesis, and nuclear and mitochondrial DNA replication, mutagenesis, oxidative stress, and DNA repair. Also molecular responses to pathogens, pathogen identification, and pathogen inactivation, as well as host-pathogen interactions, and host components of infection and resistance to infection. This program is also interested in the biotechnology of microarrays, including both genomic- and proteomic-based platforms, for real time detection of pathogens or physiological states that would reduce or interfere with human performance. This program also supports development of new biomaterials and bioproduction methods, and other advances in biotechnology methods and applications.

Scientific Meetings for Creating Interdisciplinary Research Teams (R13)

PA-10-106

National Institutes of Health (NIH)

Multiple Institutes

This FOA solicits Research Project Grant (R01) applications that will improve understanding of the basic mechanisms of behavior change by bridging work in the laboratory and the field. This understanding will advance several goals, including: the identification of the optimal targets and timepoints in the lifecourse for intervention; the identification of common mechanisms of change related to either multiple or bundled health behaviors; the ability to tailor interventions to particular at-risk individuals or groups; the application of novel technologies for behavioral assessment and change; and the identification of individuals or groups most likely to benefit from specific interventions. This initiative seeks to establish the groundwork for a unified science of behavior change, capitalizing on emerging basic science to accelerate investigation of common mechanisms that play a role in initiating or maintaining behavior change and are applicable across a broad range of health-related behaviors. Approaches from behavioral economics; the social, behavioral, cognitive and affective neurosciences; neuroeconomics; behavior genetics and genomics; and systems science are specifically encouraged. By focusing basic research on the mechanisms of behavior change, and by integrating work across laboratory and field contexts, this initiative should transform the efficacy, effectiveness, and cost efficiency of behavior change interventions.

NIH Exploratory Developmental Research Grant Program (Parent R21)

PA-10-069

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Exploratory/Developmental Grant (R21) funding opportunity supports the development of new research activities in categorical program areas. (Support generally is restricted in level of support and in time.) Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated exploratory/developmental applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The Exploratory/Developmental Grant (R21) mechanism is intended to encourage exploratory and developmental research projects by providing support for the early and conceptual stages of these projects. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research.

National Institute on Aging (NIA)

National Heart, Lung, and Blood Institute (NHLBI)

National Institute of Nursing Research (NINR)

Office of Research on Women's Health (ORWH)

Office of Dietary Supplements (ODS)

This FOA issued by the National Institute on Aging (NIA), the National Heart, Lung, and Blood Institute (NHLBI), the National Institute of Nursing Research (NINR), the Office of Research on Women's Health (ORWH), and the Office of Dietary Supplements (ODS).

encourages Research Project Grant (R01) applications proposing to study bioenergetic factors underlying increased fatigability and activity limitations in aging. Increased fatigability is a significant cause of restricted physical and cognitive activity in older adults.

Alterations in bioenergetics—the production and utilization of energy, and the regulation of these processes—may contribute significantly to increased fatigability. This FOA encourages applications that propose to 1) elucidate specific alterations in bioenergetics related to increased fatigability and activity limitations; 2) develop and evaluate improved measures of fatigability related to bioenergetics; 3) evaluate interventions for increased fatigability and activity limitations that target alterations in bioenergetics and lead to improved quality of life.

Mechanisms Underlying the Links between Psychosocial Stress, Aging, the Brain and the Body (R01)

PA-09-216

National Institute on Aging (NIA)

National Cancer Institute (NCI)

National Institute of Mental Health (NIMH)

This FOA encourages multidisciplinary and interdisciplinary research to elucidate the mechanistic links between psychosocial stress and health in aging, as well as how the aging process and age-related diseases affect the responses to psychosocial stressors.

Generally, research should be focused on (1) aging and how neural mechanisms respond to psychosocial stress and affect other body systems, (2) characterizing the behavioral, psychological and social mechanisms and pathways involved in transducing psychosocial stressors into health outcomes, (3) how stressors modulate physiological process underlying life-span, immune mechanisms, and metabolism, and (4) how psychosocial stress contributes to the development or progression of geriatric syndromes, chronic medical conditions, and disabilities in later life. Research is strongly encouraged that aims to identify appropriate targets for intervention, at any level of analysis, from societal to molecular. Research spanning multiple levels of analysis is particularly encouraged. Research focused on oxidative stress or on environmental or physical stressors of a non-psychosocial nature is not appropriate to this FOA.

The Role of Apolipoprotein E, Lipoprotein Receptors and CNS Lipid Homeostasis in Brain Aging and Alzheimer's Disease (R01)

PA-09-217

National Institute on Aging (NIA)

This FOA encourages multidisciplinary and interdisciplinary research to elucidate how Apolipoprotein E, lipoprotein receptors and CNS lipid homeostasis influence brain aging and the transition to neurodegeneration in Alzheimer's disease (AD). The ultimate goal is to gain an in depth understanding of the mechanisms by which the Apolipoprotein E e4 allele confers increased AD risk for the purpose of advancing the overall search for efficacious AD treatments and Apolipoprotein E e4-directed therapeutics in particular. To this end we encourage research spanning multiple levels of analysis in multiple species (from mice to man). Studies aimed at identifying new therapeutic targets for the treatment of AD and other age-related neurodegenerative conditions associated with lipid neurobiology are strongly encouraged. Also of great interest are projects that aim to use lipidomics, various types of imaging and other cutting edge technologies to identify and develop early biomarkers of neurodegeneration associated lipid dyshomeostasis.

Clinical Trial Planning Grants for Critical Illness and Injury in Aging (R34)

PA-10-045

National Institute on Aging (NIA)

This FOA issued by the National Institute on Aging encourages Clinical Trial Planning Grant (R34) applications to develop research protocols for Phase III and IV clinical trials related to critical illness and injury in aging. The planning grant mechanism is intended to permit early peer review of the rationale and design of the proposed Phase III or IV clinical trial, and to support development of a research team, tools for data management and research oversight, recruitment strategies, detailed protocol and Manual of Procedures (MOP), and other essential components necessary for a competitive clinical trial application. This FOA is NOT designed for collecting preliminary data or conducting pilot studies in support of the scientific rationale for a clinical trial.

Alzheimer's Disease Drug Development Program (U01)

PAR-08-266

National Institute on Aging (NIA)

The objective of this solicitation is to stimulate research in the pre-clinical development and testing of novel therapeutic compounds aimed at slowing, halting, or reversing the progressive decline in cognitive function and modifying the behavioral symptoms in Alzheimer's disease (AD); or delaying the onset of or preventing AD, mild cognitive impairment (MCI), or age-related cognitive decline. This initiative is intended to stimulate activities focused on providing sufficient data to submit an Investigational New Drug (IND) application to the Food and Drug Administration to begin human clinical testing of potential new therapies. For this program neither mechanistic/basic studies nor clinical trials will be supported; only applications to develop a therapy will be accepted.

Research on Clinical Decision Making in People with or at Risk for Life-Threatening Illness (R01) and (R21)

PA-09-122 and PA-09-121

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

This funding opportunity announcement (FOA) issued by the National Institute of Nursing Research (NINR) and the National Cancer Institute (NCI), National Institutes of Health, seeks to stimulate research on the decision-making processes made by persons at risk for and those faced with life-threatening illness. These illnesses are ones that almost always lead to death in a fairly short period of time if left untreated, but may be chronic or even cured if dealt with early in the disease process. An example of a life-threatening illness that may be chronic for some years would be HIV infection when treated. An example of a life-threatening illness that may be cured in its early stages would be breast cancer. Decision-making can occur from the point of adopting preventive behaviors through the end of life. Examples of such decisions could include participating in an HIV vaccine clinical trial, testing for genetic disorder, choosing a treatment intervention vs. watchful waiting (as in early stage prostate cancer), choosing a treatment intervention among several options, joining a therapeutic clinical trial, or making end-of-life care decisions.

Parkinson's Disease Data Organizing Center [PD-DOC] (U24)

RFA-NS-11-001

National Institute of Neurological Disorders and Stroke (NINDS)

National Institute of Environmental Health Sciences (NIEHS)

This FOA issued by the National Institute of Neurological Disorders and Stroke (NINDS) and the National Institute of Environmental Health Sciences (NIEHS), National Institutes of Health, solicits cooperative agreement grant applications from institutions/organizations that propose to develop a redesigned and enhanced Parkinson's Disease Data Organizing Center. NINDS and NIEHS are committed to facilitating the collection and sharing of data related to clinical and translational research in Parkinson's disease. The goal of this program is a resource that will serve the Parkinson's disease (PD) research community by developing an ongoing repository for data from clinical trials and clinical studies, including epidemiologic and genetic studies, related to PD, and sharing of these data to enhance research. These data may include clinical as well as associated imaging, genetic, and neuropathology data elements. In addition, the Center will link clinical data with associated genetic, biospecimen, imaging, and neuropathology data as available in other databases. The Parkinson's Disease Data Organizing Center also will develop a flexible web-based data entry system using standardized common data elements for PD clinical research studies that can be modified by investigators for a variety of clinical research studies. The center will also maintain an up-to-date listing of resources for researchers in the scientific community. Ongoing outreach efforts should be undertaken to maximize data sharing via this resource in order to optimize research in PD. The information technology employed should serve to optimize the accessibility and usefulness of the information within the data organizing center.

Heart and Vascular

Ancillary Studies in Clinical Trials (R01)

New

RFA-HL-10-024

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this Funding Opportunity Announcement (FOA) is to solicit research grant applications to conduct time-sensitive ancillary studies related to heart, lung, and blood diseases and sleep disorders in conjunction with ongoing clinical trials and other large clinical studies supported by NIH or non-NIH entities. The program establishes an accelerated review/award process to support the crucial time frame in which these ancillary studies must be performed. Time-sensitive ancillary studies include those that require active longitudinal data collection and thus need to begin recruiting subjects as close as possible to the start of the parent study. The ancillary study can address any research questions related to the mission of NHLBI for which the parent study can provide participants, infrastructure, and data. The parent studies most often will be a clinical trial, but also can be an observational study or registry that can provide a sufficient cohort of well-characterized patients. Each ancillary study application must demonstrate the time-sensitive nature of the proposal and must explicitly address why an expedited review is essential to its feasibility.

Amount: \$1,000,000

LOI: April 28, 2010, August 30, 2010, December 28, 2010

Angiogenesis in the Nervous System in Health and Disease (R01) [PA-08-015] and (R21) [PA-08-016]

PA-08-015 and PA-08-016

NIH

This Funding Opportunity Announcement (FOA) is a program announcement (PA) issued by the National Institute of Neurological Disorders and Stroke (NINDS), the National Eye Institute (NEI), the National Institute on Aging (NIA), the National Cancer Institute (NCI), and the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Institutes of Health (NIH). The aim of this FOA is to invite applications to study angiogenesis in the nervous system. Specific areas of research this FOA seeks to encourage include study of the mechanisms controlling angiogenic responses to physiological and pathological stimuli, the development and patterning of nervous system vasculature, and the etiology of disorders affecting development and/or ongoing angiogenesis in nervous system vasculature.

Amount: unspecified

LOI: N/R

Deadline: Multiple dates, see announcement

Non-Invasive Methods for Diagnosis and Progression of Diabetes, Kidney, Urological, Hematological and Digestive Diseases and Hypertensive Disorders (R01)

PA-09-181

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart Lung and Blood Institute (NHLBI)

This Funding Opportunity Announcement (FOA) is a call for the application of imaging and other non- or minimally-invasive technologies to detect, characterize, diagnose, identify persons with predisposition to, or monitor treatment of diseases of interest to the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the National Heart Lung and Blood Institute (NHLBI) of the National Institutes of Health (NIH). Also needed are new, robust surrogate markers for clinical trial endpoints, and new ways to characterize normal and pathological tissues in vivo. Diseases of interest include type 1 and 2 diabetes; acute and chronic kidney disease, liver, urologic, hematologic, digestive, endocrine, and metabolic diseases and their complications; obesity; obesity-related

hypertension, hypertension, renal and vascular disorders leading to hypertension. Applicable techniques include molecular imaging and functional imaging approaches, imaging methods with high spatial, chemical or time resolution, metabolomics, proteomics, genomics, or new spectroscopic or sensor array technologies for monitoring metabolic or physiological events.

Cross Organ Mechanism-Associated Phenotypes for Genetic Analyses of Heart, Lung, Blood, and Sleep Diseases (MAPGen for HLBS) Research Centers (U01)

RFA-HL-11-005

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this FOA issued by the NHLBI, National Institutes of Health, is to invite applications to participate in the MAPGen consortium. This consortium seeks to utilize evolving knowledge of cellular and molecular networks to define common mechanism-associated traits across organ systems. The ultimate goal is to re-define disease at the level of pathogenetic mechanisms and phenotype individuals based on pathobiology, rather than clinical presentation. This approach will provide the basis for the development of mechanism-based strategies for prevention, diagnosis and treatment in individual patients. This FOA encourages applications for research centers and runs in parallel with a separate FOA that solicits applications for the MAPGen Knowledge Base and Coordination Center (MAPGenKB) (see HL-11-004).

Amount: up to \$1,600,000

LOI: August 2, 2010

Deadline: September 1, 2010

To learn more: <http://grants.nih.gov/grants/guide/rfa-files/RFA-HL-11-005.html>

The FY10 GSFARP challenges the scientific and clinical communities to submit original ideas that foster new directions in basic science or translational research, or novel product development leading to improved therapeutic or diagnostic tools. The GSFARP seeks applications in laboratory, clinical, and epidemiologic research. Interdisciplinary and integrative approaches are welcomed.

Chronic Fatigue Syndrome: Pathophysiology and Treatment [(R01) PA-08-246] and [(R21) PA-08-247]

PA-08-246 and PA-08-247

Office of Research on Women's Health

National Center for Complementary and Alternative Medicine

National Institute on Aging

National Institute on Alcohol Abuse and Alcoholism
National Institute of Allergy and Infectious Diseases
National Institute of Arth

This Funding Opportunity Announcement (FOA) issued by the Office of Research on Women's Health (ORWH) and co-sponsoring Institutes and Centers (ICs) of the National Institutes of Health (NIH) encourages investigator(s)-initiated applications that propose to examine the etiology, diagnosis, pathophysiology, and treatment of chronic fatigue syndrome (CFS), also known as myalgic encephalomyelitis (ME/CFS) in diverse groups and across the lifespan. Innovative applications that address gaps in the understanding of the environmental and biological risk factors, the determinants of heterogeneity among patient populations, and the common mechanisms influencing the multiple body systems that are affected in CFS are encouraged. The NIH is particularly interested in funding interdisciplinary research that will enhance our knowledge of the disease process and provide evidence based solutions to improve the diagnosis, treatment, and quality of life of all persons with CFS. This FOA will utilize the NIH Research Project Grant (R01) award mechanism and runs in parallel with a FOA of identical scientific scope, PA-08-247, that encourages applications under the NIH Exploratory/Developmental (R21) grant mechanism.

Enhancing Tumoricidal Activity of Natural Killer (NK) Cells by Dietary Components for Cancer Prevention (R01) [PA-08-131] and (R21) [PA-08-132]

PA-08-131 and PA-08-132

NIH

This funding opportunity announcement (FOA) is designed to stimulate research efforts aimed at establishing the physiological significance of dietary components in modulating the tumoricidal cell activity of natural killer (NK) cells for cancer prevention. The focus of research projects proposed in response to this FOA should be on defining the minimum quantity and duration of exposure to specific dietary components to modulate tumoricidal cell activity of NK cells for cancer prevention and the underlying mechanism(s) accounting for this response. Proposed projects must include animal and/or human investigations to be considered responsive to this announcement. Highly purified populations of immune cells, specific tumor cells such as RMA-S that lack class I MHC expression, target cell-free system, or single-cell assays may be used to define the molecular basis for the diet-induced changes in tumoricidal activity. However, the in vitro studies are only to be used to support in vivo studies and should not constitute the primary focus of the application. Molecular targets for food components may be examined at the sites of the tumoricidal cell receptors and cancer cell specific ligands, the output of tumoricidal cytokines (e.g., IFN-g), and the release of lytic granules such as a granzyme, perforin, and serine proteases (granzymes).

Erythropoiesis: Components and Mechanisms (R01)

PA-09-255

National Institute of Diabetes and Digestive and Kidney Diseases

National Heart, Lung, and Blood Institute (NHLBI)

National Institute on Aging (NIA)

This FOA issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) the National Institute of Aging (NIA), and the National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health, encourages investigator-initiated R01 applications that propose hypothesis-driven research using erythroid cells. The aim of this program is to support research efforts towards a complete description of the molecular and cellular components of erythropoiesis and how these components contribute to erythropoiesis. Components include genes that are expressed (transcriptome) in erythroid cells, either during development or during differentiation, and the proteins (proteome) that are translated in erythroid cells, especially with post-translational modifications or subcellular localizations that are unique to erythroid cells. A long range goal of this program is to generate a concise description of erythropoiesis that unifies genetics, molecular processes and cytokine determinants in the erythroid lineages so that new therapeutics may be developed to measure and combat anemia.

Notice of Intent to Publish Request for Applications for Rheumatic Diseases Research Core Centers (P30)

NOT-AR-10-027

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

The National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS) intends to issue a Request for Applications (RFA) to solicit applications for Rheumatic Diseases Research Core Centers (P30). A goal of these Core Centers is to provide resources for a number of investigators with established, funded research projects, often from different disciplines, to adopt a synergistic approach to common research problems in rheumatic diseases and to ensure greater productivity than from each of the separate projects.

This notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive proposals. The RFA is expected to be published in early 2010 with an expected receipt date of late summer, 2010.

ARL/ARO Broad Agency Announcement-Revised

W911NF-07-R-0001-02

U.S. Army Research Laboratory (ARL)

14.0. Extramural research in the Life Sciences is supported by the Army Research Office. For those proposals related to purely medical topics, the investigator is invited to contact the U.S. Army Medical Research and Materiel Command. For research in the behavioral and social sciences or in training techniques, contact the Army Research Institute for Behavioral and Social Sciences. The ARO Life Sciences Division research program is currently focused on four sub

area work packages. The titles, scopes and points of contact for these work packages, each of which address general aspects of basic research in biotechnology, as well as the specific thrusts described, are listed below. A small number of symposia, conferences and workshops are also supported in part or in whole to provide an exchange of ideas related to ongoing programs in Army laboratories. Potential offerors are strongly encouraged to contact the appropriate TPOC for preliminary discussions on their ideas before any submissions. The TPOC may invite the offeror to submit a preproposal.

14.1. Bioengineering. Fundamental studies to define structure-function relationships and biochemical interactions for enzymes, receptors and other macromolecules exhibiting mechanisms and properties uniquely relevant to synthetic and degradative pathways of interest to the military, including establishment of the foundations for manipulation and exploitation of biocatalysis, ribosomal and non-ribosomal biosynthesis to enhance permissiveness toward elaboration of useful biomolecular structures and cellular systems designed with "metabolic engineering" in mind. Also, research to provide insight from nature on novel theoretical principles and mechanisms in sensory and motor function, as well as on materials with extraordinary properties, from biological sources. Includes not only initial molecular events, signal transduction pathways and integrated information processing for the powerful sensing capabilities exhibited in the biological world, but also self-assembly processes, hierarchical structure formation, and functional characterization of biomolecular materials such as those with potential "biomimetic" utility for nanometer scale fabrication or for energy and information transfer, among other possibilities. Technical Point of Contact: Dr. Robert Kokoska, Robert.kokoska@us.army.mil, (919) 549-4342.

14.2 Molecular Genetics and Genomics. This program emphasizes basic research in molecular genetics and genomics that will enable optimization of soldier cognitive and physical performance, soldier protection, and Army logistics. This includes human performance and protection under both normal conditions, and when affected by a variety of stressors that are likely to be encountered in battlefield situations, such as dehydration, heat, cold, sleep deprivation, fatigue, caloric insufficiency, microbial factors, and psychological stress. Genetic and genomic research areas include identification and characterization of gene function, gene regulation, genetic interactions, gene pathways, gene expression patterns, mitochondrial regulation and biogenesis, and nuclear and mitochondrial DNA replication, mutagenesis, oxidative stress, and DNA repair. Also molecular responses to pathogens, pathogen identification, and pathogen inactivation, as well as host-pathogen interactions, and host components of infection and resistance to infection. This program is also interested in the biotechnology of microarrays, including both genomic- and proteomic-based platforms, for real time detection of pathogens or physiological states that would reduce or interfere with human performance. This program also supports development of new biomaterials and bioproduction methods, and other advances in biotechnology methods and applications. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.3. Microbiology and Biodegradation. Biochemical and physiological mechanisms, underlying the biodegradative processes in normal, extreme, and engineered environments and fundamental studies on organisms in these environments, the properties of materials that make them susceptible or resistant to biological attack, basic concepts for anti-fungals, and studies of microbiological mechanisms with potential for contributing to the remediation of sites contaminated with toxic wastes. Included are research investigations in analytical microbiology (including microbial signatures), and in general microbial mechanisms with relevance to Army problems. Addressed here also is research into microbial communities and how to study organisms that cannot be grown in the lab, as well as research into methods to enhance the stabilization of military materiel, which would include methods to prevent microbial growth.

Also included is the development of microbial systems for unique biotechnological applications and bioengineering processes with individual microbial species or consortia of microorganisms, emphasizing the control, stability, and mechanisms of the basic cellular processes involved. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuro-psychological and/or cortical/cognitive

mechanisms underlying successful completion of complex task behaviors applicable to nonlaboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or psychophysiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states

through modeling of individual cognitive dynamics and decision making is appropriate to this research area. Technical Point of Contact: Dr. Elmar T. Schmeisser e-mail elmar.schmeisser@us.army.mil, (919) 549-4318.

Long Range Broad Agency Announcement (Baa) For Navy And Marine Corp Science And Technology

BAA 10-001

Office of Naval Research (ONR)

The Office of Naval Research (ONR) is interested in receiving proposals for Long-Range Science and Technology (S&T) Projects which offer potential for advancement and improvement of Navy and Marine Corps operations. Readers should note that this is an announcement to declare ONR's broad role in competitive funding of meritorious research across a spectrum of science and engineering disciplines.

Prior to preparing proposals, potential offerors are strongly encouraged to contact the ONR point of contact (POC) whose program best matches the offeror's field of interest. For information on POCs, refer to the ONR "Science and Technology Departments" as listed in the Science and Technology section of the ONR Home Page accessible through

the World Wide Web at <http://www.onr.navy.mil/> and for ONR's International Agent located on the ONR Global Homepage at <http://www.onrglobal.navy.mil/>. A list of the Department Codes can be found at <http://www.onr.navy.mil/>.

Work funded under a BAA may include basic research, applied research and some advanced technology development (ATD).

Research Protections Division subject areas (see web site for more subject areas):

Human subject research is critical to support the warfighter, Navy and Marine Corps training, operational capability, and the competency of the Navy medical department. This research includes the test and evaluation (T&E) of personal protective equipment such as body armor, hearing protection, and helmets; human factors engineering for combat stations/systems; improving treatment of decompression sickness; reducing spatial disorientation in aviators; and maximizing human performance and endurance, among many others.

Long Acting, Sustainable Therapies of Opiate Addiction (R01)

PAS-08-061

NIDA

This Funding Opportunity Announcement (FOA) issued by the National Institute on Drug Abuse, National Institutes of Health, encourages Research Project Grant (R01) applications from institutions/organizations that propose the development of sustained pharmacotherapies and behavioral treatments to reduce the risk of contraction and transmission of HIV. Specifically, this FOA supports applications directed at the development of (1) heroin/morphine-protein conjugates (heretofore referred to as heroin/morphine conjugate vaccines or HCVs) for the treatment of opiate addiction, (2) clinical systems for the application of currently available long-acting (30-day or longer sustained-release) dosage forms for opiate pharmacotherapies to optimize these sustained pharmacotherapies to effect the reduction of the risk for acquisition and transmission of HIV, and (3) effective clinical treatment modalities, including behavioral treatment in conjunction with pharmacotherapies, to improve the effectiveness of opiate treatment and reduce the risk behaviors associated with transmission of HIV. Clinical studies should include the assessment of HIV risk behaviors as an outcome measure.

Improvements to Biological Research Collections (BRC)

NSF 09-548

National Science Foundation (NSF)

Directorate for Biological Sciences

Division of Biological Infrastructure

The Improvements to Biological Research Collections Program provides funds for improvements to network, secure, and organize established natural history collections for sustained, accurate, and efficient accessibility of the collection to the biological research community.

The BRC program is encouraging collaborative proposals to network collections on regional and continental scales, especially collaborations that bring large and small collections together into networks. The BRC program also provides for enhancements to existing collections to improve collections, computerize specimen-related data, develop better methods of specimen curation and collection management through activities such as symposia and workshops.

Biological collections supported include those housing natural history specimens and jointly curated collections such as preserved tissues and other physical samples, e.g. DNA libraries and digital images. Such collections provide the materials necessary for research across broad areas of biological sciences.

Research on Malignancies in the Context of HIV/AIDS (R21)

PA-07-454

National Institutes of Health (NIH)

The National Cancer Institute (NCI) and National Institute of Dental and Craniofacial Research (NIDCR) are accepting proposals for research that will advance our understanding of the risks, development, progression, diagnosis, and treatment of malignancies observed in individuals with an underlying HIV infection or AIDS. Through this funding opportunity announcement (FOA), the NCI and NIDCR seek to encourage research in areas such as the study of the etiologic factors, cofactors, pathogenesis, and consequences of HIV-associated malignancies in diverse populations. Research on non-AIDS defining malignancies in the context of HIV infection is also encouraged. The incidence of non-AIDS-defining malignancies (e.g., anal, skin, and lung cancers as well as Hodgkin's disease) appear to be increasing in the era of Highly Active Antiretroviral Treatment. This FOA extends to research efforts that will provide information on the clinical outcomes of such cancers in the HIV-infected population and identify specific contributions resulting from HIV infection for the development and pathogenesis of these cancers. Ultimately, such efforts could inform screening approaches and therapies targeted to the HIV-infected population.

Amount: \$275,000

Integrating Biobehavioral and Sociocultural Research to Prevent HIV Transmission and Infection [(R01) PA-08-188] and [(R21) PA-08-189]

PA-08-188 and PA-08-189

National Institutes of Health (NIH)

This funding opportunity announcement (FOA) solicits Research Project (R01) grant applications from applicant organizations to develop theoretically grounded approaches to prevention of HIV infection and transmission that incorporate biobehavioral approaches in studies that are culturally appropriate. Biobehavioral approaches may be biomedical, or they may consist of behavioral interventions using biological markers of efficacy. Intervention and pre-intervention studies are welcomed, but descriptive ethnographic and epidemiological research is still needed in some areas. For example, descriptive research may delineate the impact of cultural variables on behaviors that impede or promote biological markers (e.g., seroconversion), lead to a better understanding of ethical concerns in biomedical preventive studies, or may illuminate as yet unrecognized issues concerned with adherence to a prevention interventions. Intervention studies should evaluate the efficacy of biomedical interventions, or of behavioral interventions that also use biological variables, in light of the sociocultural context.

PA-10-103 and PA-10-104 and PA-10-105

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

This Funding Opportunity Announcement (FOA) is intended to appeal to a broad audience of alcohol and HIV/AIDS researchers, including alcohol researchers with no prior experience in HIV/AIDS research, but with a keen appreciation for the relationship between problem drinking and HIV/AIDS and a strong interest in acquiring such experience; HIV/AIDS researchers with no prior alcohol research experience who realize the importance of more intensive alcohol interventions to improving clinical outcomes among HIV+ individuals; and those with prior research experience in the area of co-occurring HIV/AIDS and alcohol and other substance abuse. The primary objectives for this announcement are to increase research : 1) to characterize the relative importance of reducing alcohol misuse in the prevention of acquisition and transmission of HIV in order to identify and apply appropriate alcohol and HIV interventions as public health measures, 2) to more fully understand and prevent the progression of HIV disease in the presence of continued alcohol exposure and 3) to develop operational research frameworks for addressing the occurrence and persistence of infections in high-risk populations (e.g. minority women, young gay men, etc.), and translate findings these targeted populations. Given the breadth of research objectives included in this announcement, potential applicants are encouraged to carefully review all sections of the announcement for research opportunities.

Chronic Co-Morbid Conditions in HIV+ U.S. Adults on Highly-Effective Anti-Retroviral Therapy (R01) and (R21)

RFA-NR-10-001 and RFA-NR-10-002

National Institute of Nursing Research (NINR)

This FOA issued by National Institute of Nursing Research, National Institutes of Health, solicits Research Project Grant (R01) applications from institutions/organizations proposing mechanistic projects or interventions designed to understand or intervene in chronic co-morbid conditions common to HIV+ adults living in the U.S. who are treated with anti-retroviral therapy. These conditions may be a result of anti-retroviral therapy or the HIV disease process. These same kinds of conditions may also be common in older non-infected adults, but more information is needed on the natural history, including both biological and behavioral manifestations, and appropriate intervention when HIV+ adults are affected by conditions, such as cachexia, diabetes, kidney disease, neurological changes, cardiovascular disease or cancer. Since the advent of the protease inhibitors in 1996-1997, anti-retroviral treatment options have been evolving, including the customized combination ART. It is important to evaluate this progress and identify new opportunities for research associated with the use of anti-retroviral therapies and the association of co-morbidities of HIV+ individuals as they live through middle and old age. Research exploring these issues utilizing interdisciplinary and multidisciplinary research teams is strongly encouraged, as are research teams including underrepresented, minority, disabled, or women investigators.

Notice of Intent to Publish Funding Opportunity Announcements for Countermeasures Against Chemical Threats (CounterACT) Cooperative Research Projects (U01) and Research Centers of Excellence (U54)

NOT-NS-10-011

National Institute of Neurological Disorders and Stroke (NINDS)

The National Institute of Neurological Disorders and Stroke (NINDS) intends to issue two Funding Opportunity Announcements (FOAs) in the spring of 2010: "Countermeasures Against Chemical Threats (CounterACT) Research Centers of Excellence (U54)" and "Countermeasures Against Chemical Threats (CounterACT) Cooperative Research Projects (U01)". The goal of both initiatives is to provide support for translational research to develop therapeutics for reducing mortality and morbidity caused by acute exposures to chemical threat agents. Chemical threats are toxic chemicals that could be used in a terrorist attack or accidentally released from industrial production, storage or shipping. The scope of the research supported within this milestone-driven translational program includes target and candidate identification and characterization, through candidate optimization and demonstration of in vivo efficacy, through Investigational New Drug (IND) submission and clinical trials when appropriate. See www.ninds.nih.gov/counteract for a description of the CounterACT program.

The CounterACT research program will utilize Research Centers of Excellence (U54) and Cooperative Research Projects (U01) to support up to 5 years of translational research. Chemical threats to be covered include pulmonary agents (e.g. chlorine, phosgene), toxic industrial chemicals (e.g. cyanide, pesticides), chemical nerve agents (e.g. sarin, VX), and others. The NIH intends to commit approximately \$12 million per year in Fiscal Years 2011, 2012, and 2013 to fund new and/or competing renewal U01 and U54 awards. Because the nature and scope of the proposed research will vary from application to application, it is anticipated that the size and duration of each award will also vary. The total amount awarded and the number of awards will depend on the number, quality, duration, and costs of the applications received. It is anticipated that several other NIH Institutes, including the National Eye Institute (NEI), National Institute of Allergy and Infectious Diseases (NIAID), National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), National Institute of Environmental Health Sciences (NIEHS), and the National Institute of General Medical Sciences (NIGMS), may also participate in this funding opportunity announcement.

Basic Research on HIV Persistence (R01)

PA-09-152

National Institute of Allergy and Infectious Diseases (NIAID)

The aim of this Funding Opportunity Announcement (FOA) issued by the National Institute of Allergy and Infectious Diseases (NIAID), National Institutes of Health (NIH), is to increase our understanding of persistent HIV-1 infection in patients under highly active anti-retroviral therapy (HAART). Support would be through soliciting Research Project Grant (R01) applications for hypothesis-driven basic research in HIV/AIDS that is focused on directly achieving this aim. The emphasis of this initiative is on the development of new ideas and approaches in HIV-1 persistence including model and assay development that may directly inform future studies on the design of therapeutic strategies to achieve long term remission without treatment or a complete eradication of residual virus and complete cure for HIV infection and AIDS. It is anticipated that this is the first in a series of FOAs to understand the basic mechanisms of HIV persistence and then to use this information to develop ways to control and eliminate the virus-carrying cells.

Adolescent Medicine Trials Network for HIV/AIDS Interventions (ATN) [U01]

RFA-HD-10-015

Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD)

National Institute on Drug Abuse (NIDA)

National Institute of Mental Health (NIMH)

The Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), National Institute on Drug Abuse (NIDA), and the National Institute of Mental Health (NIMH) invite applications from investigators willing to participate with NICHD, NIDA, and NIMH under a cooperative agreement to support the Adolescent Medicine Trials Network for HIV/AIDS Interventions (ATN). The primary mission of the ATN will be to conduct research, both independently and in collaboration with existing research networks and individual investigators, in HIV-infected and HIV-at-risk pre-adolescents, adolescents, and young adults up to age 25 years. This network will have the capacity for developing and conducting selected behavioral, community-based translational, prophylactic, therapeutic, microbicide and vaccine trials. Mechanism of Support.

Amount: varies

LOI: March 14, 2010

Pharmacokinetic Research in Pediatric HIV/TB Co-Infection (R01) and (R21)

RFA-HD-09-015 and RFA-HD-09-016

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute of Mental Health (NIMH)

This Funding Opportunity Announcement (FOA), issued by the National Institute of Child Health and Human Development (NICHD) and the National Institute of Mental Health (NIMH), encourages Research Project Grant (R01) applications from institutions/organizations that propose to evaluate the pharmacokinetics of anti-tuberculosis (anti-TB) drugs and pharmacokinetic drug interactions between anti-TB drugs and anti-HIV medications, and to potentially provide preliminary data regarding the effect of such pharmacokinetic parameters on the outcome of treatment in children with HIV/TB co-infection. Pediatric research in these areas lags far behind that in adults due to the many challenges surrounding the diagnosis and management of TB disease in children. Research related to the treatment of TB in the context of pediatric HIV/TB co-infection is urgently needed. This FOA will support grants to define appropriate dosing of anti-TB agents in HIV-infected children and that will generate knowledge regarding the optimization of management of TB/HIV co-infection in children, including the management of central nervous system (CNS) involvement with TB through the evaluation of CNS penetration of anti-TB agents in the context of antiretroviral therapy.

Amount: \$2,000,000; varies with project

LOI: July 24, 2010

Deadline: August 24, 2010

Key Words: **TB, HIV, Treatment, Anti-Tuberculosis Drugs, Pharmacokinetics**

International Research in Homeland Security Science & Technology Projects

DHS-10-ST-108-001

Department of Homeland Security (DHS)

Science & Technology Directorate (S&T)

S&T's Chemical and Biological Division is conducting analyses to characterize and prioritize threats. It develops detection systems to provide early warning of a possible attack so as to minimize exposure and speed treatment of victims, conducts forensic analyses to support attribution, and works with our Federal partners who have lead responsibilities in decontamination and restoration, agrodefense, and food security.

Areas of interest for research identified by this Division include:

- Bioforensics
- Next-generation bioassays
- Chemical decontamination
- Foreign animal disease vaccines & diagnostics
- Next-generation biodetection

High-priority technology needs identified by this Division include:

- Tools to detect and mitigate animal disease breakouts
- Improved tools for integrated chemical, biological, radiological, and nuclear (CBRN) risk assessment
- Incident characterization capability for response and restoration
- Improved chemical and biological forensic analysis capability
- Consequence assessments of attacks on chemical facilities and ChemBio attacks on other critical infrastructure
- Integrated chemical, biological, radiological, nuclear, and explosive CBRNE sensor reporting capability
- Handheld rapid biological and chemical detection systems
- Detection paradigms and systems for enhanced, emerging and novel biological threats

Amount: \$750,000

LOI: N/R

Basic Research for Combating Weapons of Mass Destruction (C-WMD)

HDTRA1-08-10-BRCWMD-BAA

Department Of Defense (DOD)

Defense Threat Reduction Agency

This BAA is focused on soliciting basic research projects that support the DTRA mission to safeguard America and its allies from WMD (e.g., chemical, biological, radiological, nuclear, and high yield explosives) by providing capabilities to reduce, eliminate, and counter the threat and mitigate its effects. To this end, DTRA seeks research across broad strategic thrust areas:

3. Science for Protection: Basic science for protection involves advancing knowledge to protect life and life-sustaining resources and networks. Protection includes threat containment, decontamination, threat filtering, and shielding of systems. The concept is generalized to include fundamental investigations that reduce consequences of WMD, assist in the restoration of life-sustaining functions, and support forensic science.

Amount: \$2,500,000

LOI: registration: March 31, 2010

Deadline: May 12, 2010

USA Medical Research and Materiel Command Broad Agency Announcement

W81XWH-BAA10-1

Department of Defense (DOD)

This Announcement provides a general description of the Command's research programs, including specific areas of interest; general information; the evaluation and selection criteria; and proposal preparation instructions.

1) The Military Infectious Diseases Research Program (MIDRP) focuses on vaccines, antiparasitic drugs, deployable field clinical diagnostics, and vector control pertinent to naturally-occurring endemic diseases with demonstrated or potential capability to decrease military operational effectiveness.

- 2) The Combat Casualty Care Research Program (CCCRP) provides integrated capabilities for far-forward medical care to reduce the mortality and morbidity associated with major battlefield wounds and injuries.
- 3) The Military Operational Medicine Research Program (MOMRP) provides biomedical solutions that protect Soldiers and enhance their performance in operational and training environments that include multiple stressors. [a. Injury Prevention and Reduction; b. Psychological Health and Resilience; c. Environmental Health and Protection; d. Physiological Health]
- 4) The Medical Biological Defense Research Program provides medical countermeasures for biological warfare agents. These countermeasures include specialized medical materiel or procedures designed to enhance protection.
- 5) The Medical Chemical Defense Research Program seeks to preserve combat effectiveness by timely provision of medical countermeasures in response to Joint Service chemical warfare defense requirements.
- 6) The Clinical and Rehabilitative Medicine Research Program (CRM RP) focuses on the innovations required to reset our wounded warriors, both in terms of duty performance and quality of life. The CRM RP focuses its efforts on the following five research areas: neuromusculoskeletal injury (including amputees), ocular and visual system injury, hearing and vestibular systems injury, chronic pain, and regenerative medicine.

Amount: \$1,000,000

Department Of Defense Hive/Aids Prevention Program

DHAPP-BAA-10-001

Department of Defense (DOD)

DHAPP continues to rely upon the vital support of various partners, such as non-governmental organizations (NGOs), in implementing HIV prevention, care and treatment programs across the globe. Each country has a customized plan to help the countries' militaries bring its HIV/AIDS programs to sufficient scale to help reduce the spread of the epidemic and mitigate its impact.

DHAPP's current priority activities include the following:

- Institutional capacity building and developing military specific HIV strategic and operational plans that incorporate effective monitoring and evaluation procedures.
- Training of master trainers and peer educators.
- "Troop Level" HIV/AIDS prevention education and behavior change communication.
- Evaluating specific prevention interventions in military contexts
- Providing infrastructure and equipment to support HIV testing, care and/or treatment.
- Increasing testing of all military personnel.
- Developing HIV laboratory diagnostic and monitoring capabilities.
- Increasing clinical capability and other human resources for health care of those infected with HIV.
- Developing or revising military specific HIV policies that specifically address leadership roles, gender norms, gender based violence, stigma and discrimination and structural components necessary for access to care.
- Increasing male circumcision (MC) in high prevalence countries who are supportive of MC as an effective prevention intervention.
- Providing peacekeeping prevention and care interventions in militaries that contribute significant peacekeepers.

This BAA is intended to solicit existing partners and establish new partners in order to expand the DHAPP program.

Amount: \$50,000-\$300,000

Basic and Applied Scientific Research

W911NF-07-R-0003-02

ARMY RESEARCH OFFICE

8.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuropsychological and/or cortical/cognitive mechanisms underlying successful completion of complex task behaviors applicable to non-laboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or

psycho physiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states through modeling of individual cognitive dynamics and decision making is appropriate to this research area.

ARMY RESEARCH OFFICE

8.2 Molecular Genetics and Genomics. This program emphasizes basic research in molecular genetics and genomics that will enable optimization of soldier cognitive and physical performance, soldier protection, and Army logistics. This includes human performance and protection under both normal conditions, and when affected by a variety of stressors that are likely to be encountered in battlefield situations, such as dehydration, heat, cold, sleep deprivation, fatigue, caloric insufficiency, microbial factors, and psychological stress. Genetic and genomic research areas include identification and characterization of gene function, gene regulation, genetic interactions, gene pathways, gene expression patterns, mitochondrial regulation and biogenesis, and nuclear and mitochondrial DNA replication, mutagenesis, oxidative stress, and DNA repair. Also molecular responses to pathogens, pathogen identification, and pathogen inactivation, as well as host-pathogen interactions, and host components of infection and resistance to infection. This program is also interested in the biotechnology of microarrays, including both genomic- and proteomic-based platforms, for real time detection of pathogens or physiological states that would reduce or interfere with human performance. This program also supports development of new biomaterials and bioproduction methods, and other advances in biotechnology methods and applications.

ARMY RESEARCH OFFICE

8.3. Microbiology and Biodegradation. Biochemical and physiological mechanisms, underlying the biodegradative processes in normal, extreme, and engineered environments and fundamental studies on organisms in these environments, the properties of materials that make them susceptible or resistant to biological attack, basic concepts for anti-fungals, and studies of microbiological mechanisms with potential for contributing to the remediation of sites contaminated with toxic wastes. Included are research investigations in analytical microbiology (including microbial signatures), and in general microbial mechanisms with relevance to Army problems. Addressed here also is research into microbial communities and how to study organisms that cannot be grown in the lab, as well as research into methods to enhance the stabilization of military materiel, which would include methods to prevent microbial growth. Also included is the development of microbial systems for unique biotechnological applications and bioengineering processes with individual microbial species or consortia of microorganisms, emphasizing the control, stability, and mechanisms of the basic cellular processes involved.

Prevention and Management of Healthcare Associated Infections (R18)

PA-10-089

Agency for Healthcare Research and Quality (AHRQ)

The purpose of this funding opportunity is to fund extramural health services research, demonstration, dissemination, and evaluation grants that propose to prevent and more effectively manage healthcare associated infections (HAIs).

Research priorities for this FOA are the: 1) development, implementation and demonstration of the prevention and management of HAIs, along with the determination of the costs of such interventions; 2) determination of the efficacy, effectiveness, and costs of preventative interventions; 3) population-level studies on the patient risk factors, clinical presentation, sources, and disease genotypes of antibiotic-resistant organisms that can result in perceived HAIs. The scientific and practical knowledge to be achieved through these research and demonstration efforts will identify the practical and cost-effective approaches to preventing and managing HAIs.

Ancillary Studies of Acute Kidney Injury, Chronic Kidney Disease, and End Stage Renal Disease Accessing Information from Clinical Trials, Epidemiological Studies, and Databases (R01)

PA-09-196

National Institute of Diabetes and Digestive and Kidney Diseases

National Heart, Lung, and Blood Institute

The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the National Heart Lung and Blood Institute (NHLBI) invite investigator-initiated research project applications for ancillary studies to ongoing or completed clinical trials, existing administrative and clinical databases and epidemiological studies of kidney disease as well as clinical trials and epidemiological studies for other diseases or populations that lend themselves to the study of acute kidney injury and chronic kidney disease. These studies may range from new analyses of existing datasets of completed studies to additional collection of data and biological specimens in ongoing investigations. The goal of these studies should be to extend our understanding of the risk factors for developing kidney disease and their associated co-morbid illnesses such as malnutrition and cardiovascular disease, factors associated with rapid decline in kidney function among persons with chronic kidney disease, and the impact of these diseases on quality of life and mental and physical functioning. Investigations of acute kidney injury, including biomarkers is also an appropriate topic for investigation. Studies ancillary to both government and non-government supported clinical trials and epidemiological studies are encouraged. Analysis of large public access databases and other databases is also encouraged.

Basic and Clinical Studies of Congenital Urinary Tract Obstruction (R01)

PA-09-226

National Institute of Diabetes and Digestive and Kidney Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

This Program Announcement is sponsored by the NIDDK and the NICHD. Congenital obstructive uropathy is one of the major causes of chronic kidney disease and end stage renal disease (ESRD) in infants and children. The pathogenesis of this disorder, however, remains poorly understood. Many controversies and clinical uncertainties exist in the detection, prognosis, and effective treatment strategies for this condition. The impact of early fetal detection and neonatal intervention, the long-term effects of watchful waiting and the various surgical interventions have not been well studied and documented. There is also no consensus on the indications for, or ideal timing of surgical intervention. The purpose of this funding opportunity is to address the numerous scientific and clinical uncertainties related to the development, treatment and prognosis of congenital obstructive uropathy, by encouraging and facilitating research in diverse areas. These areas include: the development of objective prognostic markers; the genetic determinants of this

congenital disorder; the development of reliable animal models of the disorder; and, evaluation of the long-term effectiveness of various treatment strategies.

Amount: \$2,500,000

Development and Validation of Disease Biomarkers (R01)

PA-09-204

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) (<http://www2.niddk.nih.gov>)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute of Nursing Research (NINR)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Institute on Alcohol Abuse and Alcoholism (NIAAA), the National Institute of Nursing Research (NINR), and the Office of Dietary Supplements (ODS) of the National Institutes of Health, will provide resources to validate candidate biomarkers for well-defined human diseases of the liver, kidney, urological tract, and digestive and hematologic systems, as well as endocrine and metabolic disorders, diabetes and its complications, and obesity, for which there are no or very few biomarkers, or for which standard biomarkers are currently prohibitively invasive or expensive. A biomarker is an indicator of a disease process, and could replace hard clinical end points as a measure of the effect of new therapies. Appropriate studies will validate candidate biomarkers in well-defined patient populations, provide new technologies to monitor biomarkers or establish reliable assays for validated markers. Progress in this area has the potential to advance translational research related to efficacy of treatments and bio-behavioral interventions. This FOA is not appropriate for biomarker discovery projects.

Adherence Studies in Adolescents with Chronic Kidney or Urologic Diseases, or Diabetes (R01)

RFA-DK-10-004

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Adherence to a prescribed treatment regimen, including medications, devices and behavioral recommendations, can significantly impact morbidity and mortality for patients with chronic diseases, including chronic kidney or urologic disease and diabetes. When adherence to complex and seemingly rigid treatment regimens is poor, the results can be tragic. Adolescence can also be a particularly challenging time for adherence given the competing demands in an adolescents life, the unique developmental changes, and rapidly changing set of responsibilities as they transition to adulthood. There are few studies in pediatrics beyond the HIV literature that address non-adherence. The purpose of the FOA is to support research to improve adherence in adolescents with chronic kidney or urologic diseases, or diabetes. Therefore, the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) invites applications from new or established investigators to pursue research to better understand factors that influence adherence, develop appropriate measures of adherence, and test innovative strategies to enhance adherence in this vulnerable population.

Lung and Sleep

Ancillary Studies in Clinical Trials (R01)

New

RFA-HL-10-024

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this Funding Opportunity Announcement (FOA) is to solicit research grant applications to conduct time-sensitive ancillary studies related to heart, lung, and blood diseases and sleep disorders in conjunction with ongoing clinical trials and other large clinical studies supported by NIH or non-NIH entities. The program establishes an accelerated review/award process to support the crucial time frame in which these ancillary studies must be performed. Time-sensitive ancillary studies include those that require active longitudinal data collection and thus need to begin recruiting subjects as close as possible to the start of the parent study. The ancillary study can address any research questions related to the mission of NHLBI for which the parent study can provide participants, infrastructure, and data. The parent studies most often will be a clinical trial, but also can be an observational study or registry that can provide a sufficient cohort of well-characterized patients. Each ancillary study application must demonstrate the time-sensitive nature of the proposal and must explicitly address why an expedited review is essential to its feasibility.

NIH Exploratory Developmental Research Grant Program (Parent R21)

PA-10-069

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Exploratory/Developmental Grant (R21) funding opportunity supports the development of new research activities in categorical program areas. (Support generally is restricted in level of support and in time.) Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated exploratory/developmental applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The Exploratory/Developmental Grant (R21) mechanism is intended to encourage exploratory and developmental research projects by providing support for the early and conceptual stages of these projects. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research.

Key Words: **Lung Cancer, COPD**

NHLBI Clinical Trial Pilot Studies (R34)

PAR-10-005

National Heart, Lung, and Blood Institute (NHLBI)

The National Heart, Lung, and Blood Institute (NHLBI) (<http://www.nhlbi.nih.gov>) invites applications proposing pilot studies to obtain data that is critical for the design of robust clinical trials. This Funding Opportunity Announcement (FOA) should be used to fill gaps in scientific knowledge necessary to develop a competitive full-scale clinical trial. Appropriate pilot studies might demonstrate feasibility of an intervention or an experimental design, estimate intervention parameters, or gather other data important for the design of a trial. Applicants who propose solely to write a protocol or manual of operations or to develop infrastructure for a clinical trial will not be considered appropriate for to this announcement. Applications must demonstrate that the proposed pilot studies are both necessary and sufficient to permit the design of the clinical trial.

Amount: \$450,000

LOI: 30 days prior to standard application due dates

Deadline: Standard dates apply

To learn more: <http://grants.nih.gov/grants/guide/pa-files/PAR-10-005.html>

Key Words: **Clinical Trials, Heart, Lung, Blood, or Sleep Disorders**

NHLBI Systems Biology Collaborations (R01)

PAR-09-214

National Heart, Lung, and Blood Institute (NHLBI)

This FOA issued by the National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health, encourages Research Project Grant (R01) applications from institutions/organizations that propose collaborative systems biology research projects by multi-disciplinary teams to advance our understanding of normal physiology and perturbations associated with heart, lung, blood, and sleep (HLBS) diseases and disorders. Multi-disciplinary expertise across experimental and computational domains is required and the multi-PI mechanism is allowed, as integration across these domains is a critical element of the proposed research plan.

MAPGen Knowledge Base (MAPGenKB) and Coordination Center (U01)

RFA-HL-11-004

National Heart, Lung, and Blood Institute (NHLBI)

The National Heart, Lung, and Blood Institute (NHLBI) encourages grant applications under this Funding Opportunity Announcement (FOA) to develop and implement a Knowledge Base (KB) and Coordinating Center for the Consortium of Cross Organ Mechanism-Associated Phenotypes for Genetic Analyses of Heart, Lung, Blood, and Sleep Diseases (MAPGen for HLBS). This is one of two FOAs for the MAPGen program. The other FOA is for the Research Centers (RCs) of MAPGen and described separately in RFA-HL-11-005. The MAPGenKB will provide logistical and informatics support for the research across all RCs in the MAPGen consortium and synthesize the knowledge from the datasets of the RCs and other sources that are relevant to the goals of the MAPGen consortium. The data and tools generated from this consortium will be made available to the broad scientific community.

Amount: \$5,500,000

LOI: August 2, 2010

Deadline: September 1, 2010

Key Words: **Genetic Analyses, Informatics**

Cross Organ Mechanism-Associated Phenotypes for Genetic Analyses of Heart, Lung, Blood, and Sleep Diseases (MAPGen for HLBS) Research Centers (U01)

RFA-HL-11-005

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this FOA issued by the NHLBI, National Institutes of Health, is to invite applications to participate in the MAPGen consortium. This consortium seeks to utilize evolving knowledge of cellular and molecular networks to define common mechanism-associated traits across organ systems. The ultimate goal is to re-define disease at the level of pathogenetic mechanisms and phenotype individuals based on pathobiology, rather than clinical presentation. This approach will provide the basis for the development of mechanism-based strategies for prevention, diagnosis and treatment in individual patients. This FOA encourages applications for research centers and runs in parallel with a separate FOA that solicits applications for the MAPGen Knowledge Base and Coordination Center (MAPGenKB) (see HL-11-004).

Amount: up to \$1,600,000

LOI: August 2, 2010

Centers for Advanced Diagnostics and Experimental Therapeutics in Lung Diseases Stage I (CADET I) (P50)

RFA-HL-11-015

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this FOA issued by the NHLBI, National Institutes of Health, is to invite applications for clinical research centers for Centers for Advanced Diagnostics and Experimental Therapeutics in Lung Diseases Stage I (CADET I). The overall goal of the CADET program (Stages I and II) is to accelerate the development of novel agents for the diagnosis and treatment of lung diseases and sleep disordered breathing through the use of rational strategies based on fundamental pathobiologic processes. CADET I provides the opportunity to explore potential target(s) for validation to determine which are amenable for development of mechanism-based modalities for direct clinical application in the prevention, diagnosis, and treatment of pulmonary diseases and sleep disordered breathing. Companion FOAs for Clinical Research Centers (CRCs) and a Data Coordinating Center (DCC) for CADET Stage II (CADET II) will be released at a later date. Both the CRCs and DCC announcements will be open competitions. Centers that have been awarded in CADET I may apply for Clinical Research Centers in CADET II.

Testing Tobacco Products Promoted to Reduce Harm (R01) and (R21)

PA-09-046 and PA-09-047

National Cancer Institute (NCI)

National Institute on Drug Abuse (NIDA)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute on Drug Abuse (NIDA), invites applications that propose multidisciplinary research on potential reduced-exposure tobacco products, both smoked and smokeless. The multidisciplinary studies can span basic, biological, behavioral, surveillance, and epidemiology research. The tobacco industry is currently promoting several new products with claims that they: a) are less either harmful or less addictive; and b) purportedly deliver lower amounts of toxic, carcinogenic, and/or addictive agents to the user compared with conventional products. However, to date, the scientific evidence is insufficient to evaluate whether these new products actually reduce the users' exposure or risk for tobacco-related diseases. The overarching goal of this FOA is to determine whether potential reduced-exposure tobacco products provide a truly, less-harmful alternative to conventional tobacco products, both at the individual and population level.

Pilot and Feasibility Awards

Research Grants

LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award

Cystic Fibrosis Foundation Therapeutics, Inc. (CFFT)

The CF Foundation (CFF) offers competitive awards for research related to cystic fibrosis. Studies may be carried out at the subcellular, cellular, animal, or patient levels. Two of these funding mechanisms include Pilot and Feasibility Awards and Research Grants. Since these applications are reviewed by the CFF's Research and Research Training Committee, those proposals that include methodologies requiring sampling of materials from human subjects will only be considered under this mechanism if the sampling method constitutes minimal patient risk (e.g., venipuncture) and patient samples or data are anonymous.

For applications where more invasive procedures are proposed or where patient samples or data will not be anonymous, please submit a Letter of Intent for a Clinical Research Award.

Also, the CF Foundation offers physician-scientist training awards, including the LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award.

Amount: varies

LOI: the CF Foundation will consider NIH applications that have received a competitive score but missed the payline under the CFF/NIH-unfunded award mechanism. These applications are accepted on an on-going basis.

Deadline: first Wednesday in September

National Institute on Aging

National Institute on Alcohol Abuse and Alcoholism

National Institute of Allergy and Infectious Diseases

National Institute of Arth

This Funding Opportunity Announcement (FOA) issued by the Office of Research on Women's Health (ORWH) and co-sponsoring Institutes and Centers (ICs) of the National Institutes of Health (NIH) encourages investigator(s)-initiated applications that propose to examine the etiology, diagnosis, pathophysiology, and treatment of chronic fatigue syndrome (CFS), also known as myalgic encephalomyelitis (ME/CFS) in diverse groups and across the lifespan. Innovative applications that address gaps in the understanding of the environmental and biological risk factors, the determinants of heterogeneity among patient populations, and the common mechanisms influencing the multiple body systems that are affected in CFS are encouraged. The NIH is particularly interested in funding interdisciplinary research that will enhance our knowledge of the disease process and provide evidence based solutions to

improve the diagnosis, treatment, and quality of life of all persons with CFS. This FOA will utilize the NIH Research Project Grant (R01) award mechanism and runs in parallel with a FOA of identical scientific scope, PA-08-247, that encourages applications under the NIH Exploratory/Developmental (R21) grant mechanism.

Research Supplements to Promote Re-Entry Into Biomedical and Behavioral Research Careers - ODS

PA-04-126

National Institutes of Health (NIH)

Office of the Director (OD)

Office of Dietary Supplements

The Office of Research on Women's Health (ORWH), participating Institutes and Centers (ICs) of the National Institutes of Health (NIH), and the Office of Dietary Supplements (ODS) announce a continuing program for administrative supplements to research grants to support individuals with high potential to re-enter an active research career after taking time off to care for children or attend to other family responsibilities. The aim of these supplements is to encourage such individuals to re-enter research careers within the missions of all the program areas of NIH. This program will provide administrative supplements to existing NIH research grants for the purpose of supporting full-time or part-time research by these individuals in a program geared to bring their existing research skills and knowledge up to date. It is anticipated that at the completion of the supplement, the re-entry scientist will be in a position to apply for a career development (K) award, a research award (R), or some other form of independent research support. A second objective of the program is to mentor and guide those who receive support to reestablish careers in biomedical, behavioral, clinical or social science research. In all cases, the proposed research must be directly related to the funded approved ongoing research of the parent grant or cooperative agreement.

PA-09-190

National Institute on Aging (NIA)

National Heart, Lung, and Blood Institute (NHLBI)

National Institute of Nursing Research (NINR)

Office of Research on Women's Health (ORWH)

Office of Dietary Supplements (ODS)

This FOA issued by the National Institute on Aging (NIA), the National Heart, Lung, and Blood Institute (NHLBI), the National Institute of Nursing Research (NINR), the Office of Research on Women's Health (ORWH), and the Office of Dietary Supplements (ODS) encourages Research Project Grant (R01) applications proposing to study bioenergetic factors underlying increased fatigability and activity limitations in aging. Increased fatigability is a significant cause of restricted physical and cognitive activity in older adults. Alterations in bioenergetics—the production and utilization of energy, and the regulation of these processes—may contribute significantly to increased fatigability. This FOA encourages applications that propose to 1) elucidate specific alterations in bioenergetics related to increased fatigability and activity limitations; 2) develop and evaluate improved measures of fatigability related to bioenergetics; 3) evaluate interventions for increased fatigability and activity limitations that target alterations in bioenergetics and lead to improved quality of life.

Ovarian Cancer Research Program Pilot Award

W81XWH-10-OCRPA

Department of Defense Congressionally Directed Medical Research Programs

The OCRP Pilot Award supports conceptually innovative, high-risk/high-reward research that could ultimately lead to critical discoveries or major advancements that will drive the field of ovarian cancer forward. Research priorities should include a testable hypothesis based on strong scientific rationale. Successful projects should provide a catalyst to expand or modify current thinking and/or approaches in ovarian cancer research. Preliminary data are not required, but are allowed. The strength of the proposal should be based on sound scientific rationale and logical reasoning. Clinical trials will not be supported by this award mechanism.

NEW for FY10 OCRP is a revised definition of innovation. Innovation is a significant feature of the Pilot Award. Innovative ideas are those that, if proven correct, will provide totally new paradigms, technologies, molecules, or applications and that, when applied in the future, will reduce the burden of ovarian cancer.

Amount: \$200,000

LOI: March 11, 2010

Deadline: April 2010

DoD Breast Cancer Multi-Team Award

W81XWH-10-BCRP-MTA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

The BCRP Multi-Team Award supports the creation of a collaborative research project among three teams, each led by a Principal Investigator (PI) with a history of creativity and innovation, to focus on a critical area of breast cancer. The Multi-Team Award should create an environment that fosters and supports innovation and creativity, with consistent, intensive interaction across teams in a way that engages all members of the teams in all aspects of the research project. The multi-team approach is expected to transform the research process through the integration of basic and clinical disciplines, substantive cross-disciplinary training among the scientists on the teams, and integral participation of consumer advocates.

Amount: \$4,500,000

LOI: March 18, 2010

Deadline: April 2010

Key Words: **Breast Cancer**

Breast Cancer Transformative Vision Award

W81XWH-10-BCRP-TVA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

Vision for dramatically affecting the prevention or treatment of breast cancer, and a plan to test and achieve the vision as quickly as possible. The critical components of this award mechanism are: Vision: The most important aspect of the Transformative Vision Award is the articulation of the vision for a new approach to significantly impact the prevention or treatment of breast cancer. The final impact may be near-term or long-term, but the success of the vision must be transformative on breast cancer. A careful presentation of the state-of-the-art, and how the vision will transform this state, must be described. Implementation: The vision must be supported by a detailed plan that identifies critical milestones and clearly outlines the innovations and technical solutions that will be implemented to accomplish the milestones. It is expected that the proposed plan will present an exceptional level of innovation and creativity, and that the Principal Investigator (PI) will assemble the team necessary to realize the vision.

Amount: \$12,000,000

LOI: March 18, 2010

Deadline: April 2010

To learn more: <http://www.grants.gov/search/search.do?&mode=VIEW&flag2006=true&opId=51454>

Key Words: **Breast Cancer**

Prostate Cancer Research Program Impact Award

W81XWH-10-PCRPA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

This award will support research projects specifically focused on making a major impact on one critical issue in prostate cancer:

Reducing or eliminating the over-treatment of primary prostate cancer. Projects funded by this award will, if successful, ultimately change the standard of practice for decision-making in the treatment of primary prostate cancer. Studies conducted under the Impact Award may involve the development of surveillance mechanisms, including improvements in current clinical and diagnostic tools to

monitor prostate cancer patients. Proposed projects may include basic, translational, or clinical research, including clinical trials, provided the overall project is hypothesis-based and focused on the problem of prostate cancer over-treatment. Applications for the PCRP Impact Award should also address at least one of the following FY10 PCRP focus areas:

Biomarkers
Genetics
Imaging
Survivorship
Therapy
Tumor Biology

Amount: \$750,000

LOI: March 17, 2010

Deadline: April 19, 2010

DoD Breast Cancer Idea Award

W81XWH-10-BCRP-IDEA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs

The Idea Award is designed to promote new ideas that are still in the early stages of development and have the potential to yield highly impactful data and new avenues of investigation. This mechanism supports conceptually innovative, high-risk/high-reward research that could ultimately lead to critical discoveries or major advancements that will accelerate the eradication of breast cancer. Research projects should include a well-formulated, testable hypothesis based on strong scientific rationale. The BCRP seeks applications from all areas of basic, translational, clinical, behavioral, and epidemiological research. Presentation of preliminary data is not consistent with the intent of the Idea Award mechanism. While the inclusion of preliminary data is not prohibited, the strength of the application should not rely on preliminary data. Innovation and Impact are the most important aspects of the Idea Award.

Amount: \$375,000-\$750,000

Development of Animal Models and Related Biological Materials For Research (R21)

New

PA-10-138

National Center for Research Resources (NCRR)

This funding opportunity announcement (FOA) issued by NCRR, National Institutes of Health, encourages research grant applications from institutions/ organizations that propose to develop, characterize or improve animal models for human disease or to improve diagnosis and control diseases of laboratory animals that may interfere with research. Models to be considered must be applicable to the research interests of two or more categorical NIH Institutes/Centers. Investigators considering applying are strongly encouraged to consult with NCRR program staff as early as possible to be advised whether this FOA is appropriate. Proposals to develop models that would not have broad applications, but would apply only to a specific disease or category of research, should be proposed to the appropriate categorical institute of the National Institutes of Health (NIH), e.g., models or model systems with primary focus on cancer or heart diseases should contact those categorical institutes at NIH to discuss alternative funding opportunities.

Amount: \$275,000

Transformative Science Grants

The U.S. – Israel Binational Science Foundation (BSF)

The U.S. – Israel Binational Science Foundation (BSF) is pleased to announce the opening of the first round of applications in its new program devoted to Transformative Science grants. For complete details of the new program and submission instructions please consult the BSF website (www.bsf.org.il) under 'Guidelines & Forms'. The BSF definition of Transformative Science has been adopted

from the NSF and is: "Research driven by ideas that have potential to radically change our understanding of an important scientific concept, or lead to the creation of a new paradigm, or a new field of science. Such research is also characterized by its challenge to current understanding or by its pathways to new frontiers".

Amount: \$300,000

LOI: May 11, 2010; Applications must be submitted jointly by at least one Israeli and one American scientist, as required in all BSF programs.

Deadline: October 12, 2010; by invitation only

Long Range Broad Agency Announcement (Baa) For Navy And Marine Corp Science And Technology

BAA 10-001

Office of Naval Research (ONR)

The Office of Naval Research (ONR) is interested in receiving proposals for Long-Range Science and Technology (S&T) Projects which offer potential for advancement and improvement of Navy and Marine Corps operations. Readers should note that this is an announcement to declare ONR's broad role in competitive funding of meritorious research across a spectrum of science and engineering disciplines.

Prior to preparing proposals, potential offerors are strongly encouraged to contact the ONR point of contact (POC) whose program best matches the offeror's field of interest. For information on POCs, refer to the ONR "Science and Technology Departments" as listed in the Science and Technology section of the ONR Home Page accessible through

the World Wide Web at <http://www.onr.navy.mil/> and for ONR's International Agent located on the ONR Global Homepage at <http://www.onrglobal.navy.mil/>. A list of the Department Codes can be found at <http://www.onr.navy.mil/>.

Work funded under a BAA may include basic research, applied research and some advanced technology development (ATD).

Research Protections Division subject areas (see web site for more subject areas):

Human subject research is critical to support the warfighter, Navy and Marine Corps training, operational capability, and the competency of the Navy medical department. This research includes the test and evaluation (T&E) of personal protective equipment such as body armor, hearing protection, and helmets; human factors engineering for combat stations/systems; improving treatment of decompression sickness; reducing spatial disorientation in aviators; and maximizing human performance and endurance, among many others.

NIH Exploratory Developmental Research Grant Program (Parent R21)

PA-10-069

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Exploratory/Developmental Grant (R21) funding opportunity supports the development of new research activities in categorical program areas. (Support generally is restricted in level of support and in time.) Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated exploratory/developmental applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The Exploratory/Developmental Grant (R21) mechanism is intended to encourage exploratory and developmental research projects by providing support for the early and conceptual stages of these projects. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research.

Amount: \$275,000

Recovery Act: Update on ARRA Quarterly Reporting Requirements for Non-Competing Continuation Awards and Relinquished Projects; and Guidance to Avoid Common Errors

NOT-OD-10-065

National Institutes of Health (NIH)

American Reinvestment and Recovery Act of 2009 (ARRA)

The purposes of this Guide Notice are to: 1) provide ARRA quarterly reporting guidance for NIH non-competing continuation awards; 2) provide guidance on reporting requirements for relinquished/transferred ARRA grants; and 3) help grantees avoid some common errors identified in previous reporting periods.

To increase transparency for the public on how ARRA funds are used, NIH and its grantees are required to separately award, track, monitor, account for, report on, audit and close out ARRA funding. All awards funded by ARRA require quarterly reporting through www.FederalReporting.gov in accordance with Section 1512 of the Act. This is in addition to the annual scientific progress reports submitted on the PHS 2590 and required financial reports submitted for most NIH grants. More information on the ARRA quarterly reporting requirements, including the NIH Data Dictionary and NIH Readiness Tool, can be found on the NIH Recovery Act Recipient Reporting web page available at http://grants.nih.gov/recovery/recipient_reporting.html.

NIDCD Research Core Centers (P30)

PAR-10-077

National Institute on Deafness and Other Communication Disorders (NIDCD)

The NIDCD P30 Core Center grant contains one or more research-serving cores, providing centralized resources and facilities for funded R01 research projects. Although no funds are provided for direct support of research projects, a P30 helps to integrate and promote research in existing funded projects, and may include multi-disciplinary and regional collaborations. A Core Center must be an identifiable organizational unit either within a single grantee institution or representing a consortium of cooperating institutions (e.g., geographic or web-based). The Center may serve as an intellectual hub to stimulate cooperative research, to increase the effectiveness, capabilities or productivity of current research, and/or to promote new research directions through collaborations. Individual research cores of the Core Center may provide for sharing technical expertise or centralizing labor-intensive tasks common

among several investigators (PD/PIs); staffing, training and maintenance of shared equipment or resources, including tools or staffing to enhance activities such as recruitment databases for clinical projects; or problem-solving through innovative technical solutions using the most current methodologies. NIDCD P30 funds do not provide patient services, or support unfunded pilot studies, or facilitate research other than for funded user projects, unless directly related to advancing the potential of the Core Center itself. A P30 may provide benefits to other core centers or the larger community through sharing data or technology.

Amount: \$2,500,000

Musculoskeletal Diseases

Physiological and Structural Systems

PD 07-1141

NSF

The Physiological and Structural Systems Cluster supports research aimed at furthering the understanding of organisms as integrated units of biological organization. The Cluster considers proposals focused on interacting physiological and structural systems, their environmental and evolutionary contexts, and how these components are constrained by their integration into the whole organism. Projects that use systems approaches to understand why particular patterns of architecture and regulatory control have emerged as general organismal properties are particularly encouraged. Understanding how and why emergent organismal properties such as robustness, adaptability and resilience arise in the context of environmental, genetic, biochemical and morphological variation are of interest. The Cluster encourages model building to augment traditional experimental approaches in order to guide research on complex functional networks. Multidisciplinary approaches to the study of organismal systems including research at the interfaces of biology, physics, chemistry, mathematics, computer science and engineering are encouraged.

Amount: \$140,000

LOI: N/R

Cooperative Program in Translational Research for Neuromuscular Disease (U01)

PAR-08-229

National Institute of Neurological Disorders and Stroke
National Institute of Arthritis and Musculoskeletal and Skin Diseases

The goal of this funding opportunity announcement (FOA), from the National Institute of Neurological Disorders and Stroke (NINDS) and the National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), is to support preclinical development and testing of new therapies for neuromuscular diseases. The program will facilitate solicitation, development, and review of therapy-directed projects to accelerate the translation of basic research discoveries into therapeutic candidates for clinical testing. This program is specifically directed at projects that include therapeutic leads with demonstrated activity against the intended disease target. The program supports preclinical optimization and testing of these leads and projects must be sufficiently advanced that an IND or IDE application to the FDA can be submitted by the end of the project period. The program does not support early-stage therapeutic discovery activities such as high throughput screening. The program also excludes clinical research, basic research, and studies of disease mechanism. This is a milestone-driven cooperative agreement program involving participation of NIH staff in the development of the project plan and monitoring of research progress.

Exploratory/Developmental Projects in Translational Research for Neuromuscular Disease (R21)

PAR-08-228

National Institute of Neurological Disorders and Stroke
National Institute of Arthritis and Musculoskeletal and Skin Diseases

This Funding Opportunity Announcement (FOA), from the National Institute of Neurological Disorders and Stroke (NINDS) and the National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), requests applications for projects intended to complete preliminary steps in the pipeline for the preclinical development of therapeutics for neuromuscular diseases. Such projects, if successful, should lead directly to a subsequent project that will include all remaining activities for submission of an Investigational New Drug (IND) or Investigational Device Exemptions (IDE) application to the Food and Drug Administration (FDA). Only Aims required for therapy development can be supported in this program. This program excludes clinical research, basic research, and studies of disease mechanisms.

Centers of Research Translation (P50)

RFA-AR-11-002

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

This Funding Opportunity Announcement (FOA), issued by the National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), invites applications for Centers of Research Translation (CORT) (P50). It is expected that a CORT will have a disease-targeted translational theme with individual projects providing synergy for the theme, directed at elucidating the relevance of basic research to human disease in an area within the NIAMS mission. Two major features of the CORT program include: 1) the overarching aim of disease-specific research translation, and 2) the inclusion of resources and an administrative structure to facilitate research translation.

Amount: \$5,000,000

Replication, Fine-Mapping and Sequencing: Follow-Up on Genome-Wide Association Studies for Arthritis and Musculoskeletal and Skin Diseases (R01)

PAR-09-135

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

This Funding Opportunity Announcement (FOA), issued by the National Institute of Arthritis and Musculoskeletal and Skin Diseases, National Institutes of Health, encourages applications that propose to perform replication, fine-mapping, and sequencing studies of

human genomic regions that are putatively associated with phenotypes relevant to the NIAMS mission. Genomic regions of interest are primarily those identified by genome-wide association studies (GWAS). The objective of this FOA is to enhance the identification of causal genes and genetic variants that influence complex diseases relevant to the NIAMS mission. Replication, fine-mapping, and sequencing studies are to be conducted in existing cohorts with defined phenotypes. This FOA will not support recruitment of human subjects, collection of medical or phenotypic data, studies using animal models, or the initial discovery phase of GWAS.

Amount: \$500,000

LOI: June 1, 2010; June 1, 2011

Deadline: June 29, 2010; June 29, 2011

Year 2010 Department of Defense Peer Reviewed Medical Research Program

W81XWH-10-PRMRP-CTA

W81XWH-10-PRMRP-IIRA

W81XWH-10-PRMRP-TTDA

Department of Defense (DOD)

Congressionally Directed Medical Research Programs (CDMRP)

All applications for PRMRP funding must specifically and clearly address at least one of the topic areas as directed by Congress, and have direct relevance to the health care needs of the Armed Forces, their family members, and/or the U.S. veteran population. If the proposed research has no relevance to currently advertised PRMRP topic areas, the Government reserves the right to administratively withdraw the application. The Government also reserves the right to reassign the proposal's topic area if submitted under an inappropriate topic area. The FY10 PRMRP topic areas as provided by Congress are listed below.

Chronic Migraine and Post-traumatic Headache

Dystonia

Drug Abuse

Epilepsy

Fragile X Syndrome

Inflammatory Bowel Disease

Interstitial Cystitis

Listeria vaccine for infectious disease

Lupus

Mesothelioma

Neuroblastoma

Osteoporosis and related bone disease

Paget's Disease

Pheochromocytoma

Polycystic Kidney Disease

Post-traumatic Osteoarthritis

Scleroderma

Social Work Research

Critical Challenges in Parkinson's Disease

New

Michael J Fox Foundation (MJFF)

The foundation has announced that up to \$5.75 million in total funding will be available through three 2010 Critical Challenges: Alpha-synuclein Therapeutics — A total of \$3 million in funding is available for pre-clinical projects to accelerate therapeutic development of the PD-implicated gene alpha-synuclein, which many researchers believe holds potential to lead to a new treatment that could slow or stop the progression of PD.

Pharmacodynamic Biomarkers of LRRK2 Activity — A total of \$2 million in funding is available for efforts to develop drug-activity biomarkers that can improve outcomes from future clinical trials of treatments targeting the PD-implicated gene LRRK2. The foundation will give preference to proposals seeking to verify and validate promising, pre-defined candidate LRRK2-associated biomarkers.

Novel Hypotheses in Parkinson's Disease: Investigating Clinical Data and Human Tissue — A total of \$750,000 is available to provide scientists around the globe with the opportunity to collaborate with the Arizona Parkinson's Disease Consortium. Funded investigators should propose drug development projects that can benefit from access to APDC's exceptional bank of well-characterized biologics, postmortem tissue, and associated clinical data.

Amount: unspecified

ARL/ARO Broad Agency Announcement-Revised

W911NF-07-R-0001-02

U.S. Army Research Laboratory (ARL)

14.0. Extramural research in the Life Sciences is supported by the Army Research Office. For those proposals related to purely medical topics, the investigator is invited to contact the U.S. Army Medical Research and Materiel Command. For research in the behavioral and social sciences or in training techniques, contact the Army Research Institute for Behavioral and Social Sciences. The ARO Life Sciences Division research program is currently focused on four sub

area work packages. The titles, scopes and points of contact for these work packages, each of which address general aspects of basic research in biotechnology, as well as the specific thrusts described, are listed below. A small number of symposia, conferences and workshops are also supported in part or in whole to provide an exchange of ideas related to ongoing programs in Army laboratories. Potential offerors are strongly encouraged to contact the appropriate TPOC for preliminary discussions on their ideas before any submissions. The TPOC may invite the offeror to submit a preproposal.

14.1. Bioengineering. Fundamental studies to define structure-function relationships and biochemical interactions for enzymes, receptors and other macromolecules exhibiting mechanisms and properties uniquely relevant to synthetic and degradative pathways of interest to the military, including establishment of the foundations for manipulation and exploitation of biocatalysis, ribosomal and non-ribosomal biosynthesis to enhance permissiveness toward elaboration of useful biomolecular structures and cellular systems designed with "metabolic engineering" in mind. Also, research to provide insight from nature on novel theoretical principles and mechanisms in sensory and motor function, as well as on materials with extraordinary properties, from biological sources. Includes not only initial molecular events, signal transduction pathways and integrated information processing for the powerful sensing capabilities exhibited in the biological world, but also self-assembly processes, hierarchical structure formation, and functional characterization of biomolecular materials such as those with potential "biomimetic" utility for nanometer scale fabrication or for energy and information transfer, among other possibilities. Technical Point of Contact: Dr. Robert Kokoska, Robert.kokoska@us.army.mil, (919) 549-4342.

14.2 Molecular Genetics and Genomics. This program emphasizes basic research in molecular genetics and genomics that will enable optimization of soldier cognitive and physical performance, soldier protection, and Army logistics. This includes human performance and protection under both normal conditions, and when affected by a variety of stressors that are likely to be encountered in battlefield situations, such as dehydration, heat, cold, sleep deprivation, fatigue, caloric insufficiency, microbial factors, and psychological stress.

Genetic and genomic research areas include identification and characterization of gene function, gene regulation, genetic interactions, gene pathways, gene expression patterns, mitochondrial regulation and biogenesis, and nuclear and mitochondrial DNA replication, mutagenesis, oxidative stress, and DNA repair. Also molecular responses to pathogens, pathogen identification, and pathogen inactivation, as well as host-pathogen interactions, and host components of infection and resistance to infection. This program is also interested in the biotechnology of microarrays, including both genomic- and proteomic-based platforms, for real time detection of pathogens or physiological states that would reduce or interfere with human

performance. This program also supports development of new biomaterials and bioproduction methods, and other advances in biotechnology methods and applications. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.3. Microbiology and Biodegradation. Biochemical and physiological mechanisms, underlying the biodegradative processes in normal, extreme, and engineered environments and fundamental studies on organisms in these environments, the properties of materials that make them susceptible or resistant to biological attack, basic concepts for anti-fungals, and studies of microbiological mechanisms with potential for contributing to the remediation of sites contaminated with toxic wastes. Included are research investigations in analytical microbiology (including microbial signatures), and in general microbial mechanisms with relevance to Army problems. Addressed here also is research into microbial communities and how to study organisms that cannot be grown in the lab, as well as research into methods to enhance the stabilization of military materiel, which would include methods to prevent microbial growth.

Also included is the development of microbial systems for unique biotechnological applications and bioengineering processes with individual microbial species or consortia of microorganisms, emphasizing the control, stability, and mechanisms of the basic cellular processes involved. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuro-psychological and/or cortical/cognitive

mechanisms underlying successful completion of complex task behaviors applicable to nonlaboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or psychophysiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states

through modeling of individual cognitive dynamics and decision making is appropriate to this research area. Technical Point of Contact: Dr. Elmar T. Schmeisser e-mail elmar.schmeisser@us.army.mil, (919) 549-4318.

Innovation in Molecular Imaging Probes (R01)

PAR-09-016

National Institute of Biomedical Imaging and Engineering

National Institute on Aging

National Institute of Arthritis and Musculoskeletal and Skin Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute

This FOA is issued by the National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health. This FOA is a follow up of a previous Roadmap RFA (RM-04-021 "Innovation in Molecular Imaging Probes"). The purpose of this initiative is to encourage the development of novel molecular imaging approaches that can detect and image specific molecular activities in vivo, and have the potential for clinical applications. Novel molecular imaging approaches developed through this initiative can focus on one (or both) of the following long-term translational goals: (1) imaging the characteristic markers, and function, of normal cells in control human subjects and patients, and (2) imaging the characteristic markers, and biochemical or physiological abnormalities, of disease cells in patients. Potential abnormalities that could provide early markers for disease include (but are not restricted to): inflammation, fibrosis, immune cell activation, altered signal transduction pathways, altered gene expression pathways, and altered post-translational modification of proteins. This initiative solicits applications that explore innovative "high-impact" approaches, rather than incremental technology development that is already supported by current NIH programs.

Advances in Bioscience for Airmen Performance

BAA-09-02-RH

Air Force Research Laboratory, Human Effectiveness Directorate, Biosciences and Performance Division (AFRL/RHP)

The 711th Human Performance Wing, Human Effectiveness Directorate is soliciting white papers under this announcement for innovative science and technology projects to support advanced bioscience research. Specifically, the Biosciences and Performance Division is seeking unique and innovative research concepts that address its technical mission areas. Research is sought primarily in the following four technical areas: 1) Applied Biotechnology, 2) Biobehavioral Performance, 3) Biomechanics, and 4) Counter proliferation.

1) Applied Biotechnology - Goal is to develop and exploit advances in biotechnology and associated nanotechnologies to enhance performance and situational awareness of the force.

2) Biobehavioral Performance – Goal is to develop bio-based methods and techniques to sustain and optimize airmen's cognitive performance.

3) Vulnerability Analysis – Goal is to rapidly identify human threat conditions, and sustain/expand Airmen performance in stressful environments. It includes research in physical and physiological biosignatures, neuroscience, anthropometry, biomechanics, human modeling, database networking, and data mining.

4) Counter proliferation – Goal is to improve the Air Force's ability to locate, identify, track, target, and destroy biological warfare agents (BWA) and other weapons of mass destruction (WMD), as well as anticipate and mitigate WMD effects on AF operations.

Lab to Marketplace: Tools for Brain and Behavioral Research (SBIR [R43/R44])

PA-08-071

NIH

The NIH Blueprint for Neuroscience Research is a framework to enhance cooperative activities among the NIH Office of the Director and 15 NIH Institutes and Centers that support research on the nervous system. This Funding Opportunity Announcement (FOA) is released in affiliation with the Neuroscience Blueprint, with Institutes and Centers participating independently, and with participation by Institutes and Centers that are not part of the Blueprint. This FOA encourages the translation of technologies for brain or behavioral research from academic and other non-small business research sectors to the marketplace. Solicited from Small Business Concerns (SBCs) are Small Business Innovation Research (SBIR) grant applications that propose to further develop, make more robust, and make more user-friendly such technologies in preparation for commercial dissemination. It is expected that this activity will require partnerships and close collaboration between the original developers of these technologies and SBCs, which may be accomplished in any of a number of ways, including the use of multiple principle investigators.

Key Words:

Silvio O. Conte Centers for Basic and Translational Mental Health Research (P50)

PAR-08-194

National Institutes of Health (NIH)

National Institute of Mental Health (NIMH)

The National Institute of Mental Health (NIMH) invites applications for Conte Centers for Basic and Translational Mental Health Research. The purpose of these Centers is to support interdisciplinary teams of researchers engaging in integrative, novel, and creative experimental approaches to address high-risk, high-impact questions that will significantly advance the state of the science in brain and behavioral research relevant to mental health. Conte Centers comprise a collaborative, cutting-edge, interdisciplinary research program conducted at multiple levels of analysis spanning from genes to behavior to disease in humans, animals, and model systems, from infancy to adulthood as appropriate, based on a well-defined and unified scientific question (hypothesis) or problem. Areas of interest span the full range of basic neuroscience, basic behavioral science, genetics research, and proof-of-concept clinical trials, as well as the translational integration of neuroscience and behavioral science with study of the etiology, pathogenesis, and/or the developmental progression of mental disorders across the lifespan. Proposed Centers should be directed towards a well-defined and unified scientific question or problem and in some instances may include discovery-based as well as technology development components.

Amount: \$10,750,000

LOI: August 25, 2010

Jointly Sponsored Ruth L. Kirschstein National Research Service Award Institutional Predoctoral Training Program in the Neurosciences (T32)

PAR-10-116

National Institutes of Health (NIH)

multiple institutes

The Jointly Sponsored NIH Predoctoral Training Program in the Neurosciences supports broad and fundamental, early-stage graduate research training in the neurosciences via institutional NRSA research training grants (T32) at domestic institutions of higher education. Trainees are supported during years 1 and 2 of their graduate research training when they are typically not committed to a dissertation laboratory. The primary objective is to prepare qualified individuals for careers in neuroscience that have a significant impact on the health-related research needs of the Nation.

Amount: varies

LOI: April 25, 2010

Understanding and Treating Generalized and Focal Dystonias (R01)

PA-07-397

National Institutes of Health (NIH)

This program invites research grant applications aimed at understanding or treating generalized and focal dystonias. The aim of this FOA is to encourage basic, translational and clinical studies; to determine the patho-physiology of dystonia; to stimulate the development of basic and translational resources to further dystonia research; to accelerate research into promising therapeutic approaches for dystonia; and to stimulate progress in dystonia research through encouraging and facilitating interdisciplinary interactions.

Amount: unspecified

Gut-Liver-Brain Interactions in Alcohol-Induced Pathogenesis (R01) and (R21)

RFA-AA-10-007 and RFA-AA-10-008

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

The goal of this Funding Opportunity Announcements (FOA), issued by the National Institute on Alcohol Abuse and Alcoholism (NIAAA), is to stimulate innovative research that will determine (1) how alcohol disrupts gut-liver-brain physiological communications, and (2) how these alterations contribute to the development and exacerbation of alcohol-associated diseases. These investigations are expected to provide a more comprehensive understanding of cellular and molecular mechanisms by which alcohol impairs homeostatic functions at both organ and systemic levels and initiates/promotes tissue injury.

Amount: \$2,500,000

LOI: March 20, 2010

Deadline: April 20, 2010

Key Words: **Alcohol, Alcohol Associated Disease**

The Role of Apolipoprotein E, Lipoprotein Receptors and CNS Lipid Homeostasis in Brain Aging and Alzheimer's Disease (R01)

PA-09-217

National Institute on Aging (NIA)

This FOA encourages multidisciplinary and interdisciplinary research to elucidate how Apolipoprotein E, lipoprotein receptors and CNS lipid homeostasis influence brain aging and the transition to neurodegeneration in Alzheimer's disease (AD). The ultimate goal is to gain an in depth understanding of the mechanisms by which the Apolipoprotein E e4 allele confers increased AD risk for the purpose of advancing the overall search for efficacious AD treatments and Apolipoprotein E e4-directed therapeutics in particular. To this end we encourage research spanning multiple levels of analysis in multiple species (from mice to man). Studies aimed at identifying new therapeutic targets for the treatment of AD and other age-related neurodegenerative conditions associated with lipid neurobiology are strongly encouraged. Also of great interest are projects that aim to use lipidomics, various types of imaging and other cutting edge technologies to identify and develop early biomarkers of neurodegeneration associated lipid dyshomeostasis.

Amount: varies

LOI: N/R

Deadline: Standard dates apply

Key Words: **Apolipoprotein, Alzheimer's Disease**

Alzheimer's Disease Drug Development Program (U01)

PAR-08-266

National Institute on Aging (NIA)

The objective of this solicitation is to stimulate research in the pre-clinical development and testing of novel therapeutic compounds aimed at slowing, halting, or reversing the progressive decline in cognitive function and modifying the behavioral symptoms in Alzheimer's disease (AD); or delaying the onset of or preventing AD, mild cognitive impairment (MCI), or age-related cognitive decline. This initiative is intended to stimulate activities focused on providing sufficient data to submit an Investigational New Drug (IND) application to the Food and Drug Administration to begin human clinical testing of potential new therapies. For this program neither mechanistic/basic studies nor clinical trials will be supported; only applications to develop a therapy will be accepted.

Amount: \$4,000,000

LOI: September 1, 2010, October 1, 2010, January 3, 2011, February 1, 2011, September 1, 2011 and October 3, 2011. (Note: The October and February letters of receipt dates are for amended applications only).

Deadline: October 1, 2010, November 1, 2010, February 1, 2011, March 1, 2011, October 1, 2011 and November 1, 2011. (Note: The November and March receipt dates are for amended applications only).

Mechanisms, Models, Measurement, & Management in Pain Research (R01), (R03) and (R21)

PA-10-006 and PA-10-008 and PA-10-007

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

National Center for Complementary and Alternative Medicine (NCCAM)

National Institute on Aging (NIA)

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

The purpose of this Funding Opportunity Announcement (FOA), "Mechanisms, Models, Measurement, & Management in Pain Research" issued by the National Institute of Nursing Research (NINR), in conjunction with members of the NIH Pain Consortium as listed above, is to inform the scientific community of the pain research interests of the various Institutes and Centers (ICs) at the National Institutes of Health (NIH) and to stimulate and foster a wide range of basic, clinical, and translational studies on pain as they relate to the missions of these ICs. New advances are needed in every area of pain research, from the micro perspective of molecular sciences to the macro perspective of behavioral and social sciences. Although great strides have been made in some areas, such as the identification of neural pathways of pain, the experience of pain and the challenge of treatment have remained uniquely individual and unsolved. Furthermore, our understanding of how and why individuals transition to a chronic pain state after an acute insult is limited. Research to address these issues conducted by interdisciplinary and multidisciplinary research teams is strongly encouraged, as is research from underrepresented, minority, disabled, or women investigators.

Cooperative Program in Translational Research for Neuromuscular Disease (U01)

PAR-08-229

National Institute of Neurological Disorders and Stroke

National Institute of Arthritis and Musculoskeletal and Skin Diseases

The goal of this funding opportunity announcement (FOA), from the National Institute of Neurological Disorders and Stroke (NINDS) and the National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS), is to support preclinical development and testing of new therapies for neuromuscular diseases. The program will facilitate solicitation, development, and review of therapy-directed projects to accelerate the translation of basic research discoveries into therapeutic candidates for clinical testing. This program is specifically directed at projects that include therapeutic leads with demonstrated activity against the intended disease target. The program supports preclinical optimization and testing of these leads and projects must be sufficiently advanced that an IND or IDE application to the FDA can be submitted by the end of the project period. The program does not support early-stage therapeutic discovery activities such as high throughput screening. The program also excludes clinical research, basic research, and studies of disease mechanism. This is a milestone-driven cooperative agreement program involving participation of NIH staff in the development of the project plan and monitoring of research progress.

Parkinson's Disease Data Organizing Center [PD-DOC] (U24)

RFA-NS-11-001

National Institute of Neurological Disorders and Stroke (NINDS)

National Institute of Environmental Health Sciences (NIEHS)

This FOA issued by the National Institute of Neurological Disorders and Stroke (NINDS) and the National Institute of Environmental Health Sciences (NIEHS), National Institutes of Health, solicits cooperative agreement grant applications from institutions/organizations that propose to develop a redesigned and enhanced Parkinson's Disease Data Organizing Center. NINDS and NIEHS are committed to facilitating the collection and sharing of data related to clinical and translational research in Parkinson's disease. The goal of this program is a resource that will serve the Parkinson's disease (PD) research community by developing an ongoing repository for data from clinical trials and clinical studies, including epidemiologic and genetic studies, related to PD, and sharing of these data to enhance research. These data may include clinical as well as associated imaging, genetic, and neuropathology data elements. In addition, the Center will link clinical data with associated genetic, biospecimen, imaging, and neuropathology data as available in other databases. The Parkinson's Disease Data Organizing Center also will develop a flexible web-based data entry system using standardized common data elements for PD clinical research studies that can be modified by investigators for a variety of clinical research studies. The center will also maintain an up-to-date listing of resources for researchers in the scientific community. Ongoing outreach efforts should be undertaken to maximize data sharing via this resource in order to optimize research in PD. The information technology employed should serve to optimize the accessibility and usefulness of the information within the data organizing center.

Amount: \$3,400,000

LOI: March 30, 2010

Pharmacologic Agents and Drugs for Mental Disorders (SBIR [R43/R44])

PA-08-142

National Institute of Mental Health

This funding opportunity announcement (FOA) solicits Small Business Innovation Research (SBIR) grant applications that propose to develop novel pharmacologic agents for brain research related to mental disorders, including research aimed at discovering new drugs for these disorders. In addition, this FOA solicits SBIR grant applications that propose to take existing, promising compounds through the next step of drug discovery and development. Finally, this FOA also encourages SBIR grant applications designed to study the effectiveness of novel interventions.

Amount: up to \$350,000 total costs per year and time periods up to two years for Phase I may be requested. Budgets up to \$600,000 total costs per year and up to three years may be requested for Phase II.

Michael J. Fox Foundation Launches Second Year of Rapid Response Innovation Awards

MJFF

The program is designed to provide funding for strong ideas being tested for the first time. RRIA allows for the submission of applications at any time of year. There is no pre-proposal stage, and the standard application has been shortened to three pages. Additionally, postdoctoral researchers are permitted to apply as principal investigators under this initiative, provided the head of their lab serves as Administrative PI to assist with the provision of institutional documents and sign the award contract.

DOD

Congressionally Directed Medical Research Programs (CDMRP)

The vision of the FY10 NFRP is to find and fund the best research to eradicate the clinical impact of NF. Toward this goal, the NFRP seeks to:

- Support innovative, high-impact research that will foster new directions for and address neglected issues in NF research,
- Sponsor multidisciplinary and multi-institutional collaborations that will bring new perspectives to the field,
- Foster the next generation of NF investigators,
- Promote translational and clinical studies to move promising ideas from bench to bedside,
- Develop a balanced portfolio of meritorious research related to all aspects of NF1, NF2, and Schwannomatosis.

Areas of Encouragement: The FY10 NFRP encourages research proposals that specifically address the critical needs of the NF community in the following areas:

- Complications of NF with high mortality such as neoplasms and cerebrovascular abnormalities;
- Complications of NF with high morbidity such as skeletal maladies, learning deficits, hormone-associated effects, and pain;
- Refinement and standardization of imaging techniques, molecular and cellular markers, and quality of life metrics for use in future clinical trials; and
- Translational research such as the development or preclinical testing of therapeutic agents for the treatment of NF.

ARMY RESEARCH OFFICE

8.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuropsychological and/or cortical/cognitive mechanisms underlying successful completion of complex task behaviors applicable to non-laboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral

nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or psycho physiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states through modeling of individual cognitive dynamics and decision making is appropriate to this research area.

Advances in Bioscience for Airmen Performance

BAA-09-02-RH

Air Force Research Laboratory, Human Effectiveness Directorate, Biosciences and Performance Division (AFRL/RHP)

The 711th Human Performance Wing, Human Effectiveness Directorate is soliciting white papers under this announcement for innovative science and technology projects to support advanced bioscience research. Specifically, the Biosciences and Performance Division is seeking unique and innovative research concepts that address its technical mission areas. Research is sought primarily in the following four technical areas: 1) Applied Biotechnology, 2) Biobehavioral Performance, 3) Biomechanics, and 4) Counter proliferation.

1) Applied Biotechnology - Goal is to develop and exploit advances in biotechnology and associated nanotechnologies to enhance performance and situational awareness of the force.

2) Biobehavioral Performance – Goal is to develop bio-based methods and techniques to sustain and optimize airmen's cognitive performance.

3) Vulnerability Analysis – Goal is to rapidly identify human threat conditions, and sustain/expand Airmen performance in stressful environments. It includes research in physical and physiological biosignatures, neuroscience, anthropometry, biomechanics, human modeling, database networking, and data mining.

4) Counter proliferation – Goal is to improve the Air Force's ability to locate, identify, track, target, and destroy biological warfare agents (BWA) and other weapons of mass destruction (WMD), as well as anticipate and mitigate WMD effects on AF operations.

2010-11 Scholars Program in Youth Settings Research

New

William T. Grant Foundation

An initiative of the William T. Grant Foundation, the William T. Grant Scholars Program is accepting applications from promising early-career researchers who want to tackle questions important to theory and either policy or practice for improving youth settings.

The program is designed to support promising early-career researchers from diverse disciplines who have demonstrated success in conducting high-quality research and are seeking to further develop and broaden their expertise. The foundation is interested in applicants trained across a range of social, behavioral, and health sciences. Applicants must submit a project that is consistent with the

foundation's current research interests: addressing issues that have compelling relevance for theory and policies or practices affecting the settings of youth between the ages of 8 and 25 in the United States or a vulnerable sub-population of those youth.

Amount: \$350,000

Aetna 2010 Grant Program

New

Aetna Foundation

For 2010, the foundation will focus its grant making on issues that improve health and the healthcare system in three areas: obesity (addressing the rising rate of obesity among U.S. adults and children); racial and ethnic healthcare equity (promoting equity in health and health care for common chronic conditions and infant mortality); and integrated health care (advancing high-quality health care by improving care coordination and communications among healthcare professionals, creating informed and involved patients, and promoting cost-effective, affordable care). Grant applications that address more than one of these areas will receive priority consideration.

Within the three program areas, the foundation will award the following types of grants: research grants to generate new knowledge, making use of either quantitative or qualitative techniques; project grants to test, apply, or disseminate new practices designed to improve health and health care; and policy grants to analyze and promote policies to ensure that programs and practices to improve health and health care can be replicated and disseminated broadly. In addition, the foundation will consider applications for sponsorship of fundraising events such as galas and walks, outreach activities (e.g., health fairs), and other community-based health and wellness initiatives aligned with the foundation's funding priorities.

Amount: up to \$250,000

Science of Behavior Change: Finding Mechanisms of Change in the Laboratory and the Field (R01)

RFA-RM-10-002

National Institutes of Health (NIH)

Multiple Institutes

This FOA solicits Research Project Grant (R01) applications that will improve understanding of the basic mechanisms of behavior change by bridging work in the laboratory and the field. This understanding will advance several goals, including: the identification of the optimal targets and timepoints in the lifecourse for intervention; the identification of common mechanisms of change related to either multiple or bundled health behaviors; the ability to tailor interventions to particular at-risk individuals or groups; the application of novel technologies for behavioral assessment and change; and the identification of individuals or groups most likely to benefit from specific interventions. This initiative seeks to establish the groundwork for a unified science of behavior change, capitalizing on emerging basic science to accelerate investigation of common mechanisms that play a role in initiating or maintaining behavior change and are applicable across a broad range of health-related behaviors. Approaches from behavioral economics; the social, behavioral, cognitive and affective neurosciences; neuroeconomics; behavior genetics and genomics; and systems science are specifically encouraged. By focusing basic research on the mechanisms of behavior change, and by integrating work across laboratory and field contexts, this initiative should transform the efficacy, effectiveness, and cost efficiency of behavior change interventions.

Mechanisms, Models, Measurement, & Management in Pain Research (R01), (R03) and (R21)

PA-10-006 and PA-10-008 and PA-10-007

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

National Center for Complementary and Alternative Medicine (NCCAM)

National Institute on Aging (NIA)

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

The purpose of this Funding Opportunity Announcement (FOA), "Mechanisms, Models, Measurement, & Management in Pain Research" issued by the National Institute of Nursing Research (NINR), in conjunction with members of the NIH Pain Consortium as listed above, is to inform the scientific community of the pain research interests of the various Institutes and Centers (ICs) at the National Institutes of Health (NIH) and to stimulate and foster a wide range of basic, clinical, and translational studies on pain as they relate to the missions of these ICs. New advances are needed in every area of pain research, from the micro perspective of molecular sciences to the macro perspective of behavioral and social sciences. Although great strides have been made in some areas, such as the identification of neural pathways of pain, the experience of pain and the challenge of treatment have remained uniquely individual and unsolved. Furthermore, our understanding of how and why individuals transition to a chronic pain state after an acute insult is limited. Research to address these issues conducted by interdisciplinary and multidisciplinary research teams is strongly encouraged, as is research from underrepresented, minority, disabled, or women investigators.

Research on Clinical Decision Making in People with or at Risk for Life-Threatening Illness (R01) and (R21)

PA-09-122 and PA-09-121

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

This funding opportunity announcement (FOA) issued by the National Institute of Nursing Research (NINR) and the National Cancer Institute (NCI), National Institutes of Health, seeks to stimulate research on the decision-making processes made by persons at risk for and those faced with life-threatening illness. These illnesses are ones that almost always lead to death in a fairly short period of time if left untreated, but may be chronic or even cured if dealt with early in the disease process. An example of a life-threatening illness that may be chronic for some years would be HIV infection when treated. An example of a life-threatening illness that may be cured in its early stages would be breast cancer. Decision-making can occur from the point of adopting preventive behaviors through the end of life. Examples of such decisions could include participating in an HIV vaccine clinical trial, testing for genetic disorder, choosing a treatment intervention vs. watchful waiting (as in early stage prostate cancer), choosing a treatment intervention among several options, joining a therapeutic clinical trial, or making end-of-life care decisions.

Chronic Co-Morbid Conditions in HIV+ U.S. Adults on Highly-Effective Anti-Retroviral Therapy (R01) and (R21)

RFA-NR-10-001 and RFA-NR-10-002

National Institute of Nursing Research (NINR)

This FOA issued by National Institute of Nursing Research, National Institutes of Health, solicits Research Project Grant (R01) applications from institutions/organizations proposing mechanistic projects or interventions designed to understand or intervene in chronic co-morbid conditions common to HIV+ adults living in the U.S. who are treated with anti-retroviral therapy. These conditions may be a result of anti-retroviral therapy or the HIV disease process. These same kinds of conditions may also be common in older non-infected adults, but more information is needed on the natural history, including both biological and behavioral manifestations, and appropriate intervention when HIV+ adults are affected by conditions, such as cachexia, diabetes, kidney disease, neurological changes, cardiovascular disease or cancer. Since the advent of the protease inhibitors in 1996-1997, anti-retroviral treatment options have been evolving, including the customized combination ART. It is important to evaluate this progress and identify new opportunities for research associated with the use of anti-retroviral therapies and the association of co-morbidities of HIV+ individuals as they live through middle and old age. Research exploring these issues utilizing interdisciplinary and multidisciplinary research teams is strongly encouraged, as are research teams including underrepresented, minority, disabled, or women investigators.

Ruth L. Kirschstein National Research Service Award (NRSA) for Individual Predoctoral Fellows in Nursing Research (F31)

PAR-09-227

National Institute of Nursing Research

This FOA issued by the National Institute of Nursing Research (NINR/NIH), National Institutes of Health, encourages Individual Predoctoral Fellowship (F31) applications from institutions/organizations that propose to increase the number of nurses prepared with a doctoral degree in order to meet the demands for adequately trained behavioral, biological, and biobehavioral scientists. NINR is particularly interested in facilitating the progress of students who are in research training programs for recent nursing graduates and students in BSN to PhD programs. This fellowship program will provide predoctoral training support for doctoral students. The applicant must propose a research training program and dissertation research that is consistent with the scientific mission of the NINR. Research topics and skills that will serve as a foundation for an ongoing program of research are of particular interest. The research training experience must enhance the applicant's conceptualization of research problems and research skills, under the guidance and supervision of a committed mentor who is an active and established investigator in the area of the applicant's proposed research. The research training program should be carried out in a research environment that includes appropriate human and technical resources and is demonstrably committed to the research training of the applicant in the program he/she proposes in the application.

Collaborative Research on the Transition From Acute to Chronic Pain: New Models and Measures in Clinical and Preclinical Pain Research (R01)

RFA-DE-11-001

National Institute of Dental and Craniofacial Research (NIDCR)

The overall goal of this FOA is to stimulate preclinical and clinical research that will accelerate our understanding of the biological and behavioral determinants driving the transition from acute pain to chronic pain disorders. An understanding of the mechanisms and risk factors that determine who will transition to a chronic pain state is necessary in order to intervene in this transition and to design new, effective treatments to resolve acute pain before it becomes chronic. The objectives of this FOA are to: 1) assemble research teams with expertise in basic and clinical pain research and related expertise outside the pain field that will provide novel, collaborative, multidisciplinary approaches to answer crucial questions about the transition from acute to chronic pain; 2) discover biological and behavioral mechanisms that drive the transition from an acute pain state to a chronic dysfunctional pain condition; 3) develop new clinical and preclinical models and measures of pain that will be essential to identify and characterize these mechanisms. Studies that involve considerable risk but with the potential for breakthroughs in the field are strongly encouraged.

Small Grants for Behavioral Research in Cancer Control (R03)

PA-09-003

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute of Nursing Research (NINR), at the National Institutes of Health (NIH), is intended to provide support for either new investigators in cancer-related behavioral research, or investigators who want to refocus their research interests toward behavioral research in cancer control. The program is designed to facilitate the growth of a nationwide cohort of scientists with research experience in behavioral cancer control and design of public health interventions. Preliminary data for the proposed projects are not required. Overarching goals are to: (1) encourage new investigators to enter the field of behavioral research in cancer control and initiate their long-term career development aimed at becoming independent investigators in the field, and (2) support research on transfer of behavioral science knowledge into cancer control practice.

Improving Patient Safety through Simulation Research (R18)

RFA-HS-10-018

Agency for Healthcare Research and Quality (AHRQ)

Center for Outcomes and Evidence (COE)

The Agency for Healthcare Research and Quality (AHRQ) is interested in funding a diverse set of projects that develop, test and evaluate various simulation approaches for the purpose of improving the safe delivery of health care. Simulation in health care predominately is a training technique that exposes individuals and teams to realistic clinical challenges through the use of mannequins, task trainers, virtual reality, or standardized patients, and allows participants to experience in real-time the consequences of their decisions and actions. The principal advantage of simulation is that it provides a safe environment for health care practitioners to acquire valuable experience without putting patients at risk. Simulation also can be used as a test-bed to improve clinical processes and to identify failure modes or other areas of concern in new procedures and technologies that might otherwise be unanticipated and serve as threats to patient safety. Applications that address a variety of clinical settings are sought.

Researching Implementation and Change while Improving Quality (R18)

PAR-08-136

Agency for Healthcare Research and Quality

The Agency for Healthcare Research and Quality (AHRQ) announces the Agency's interest in supporting grants to rigorously study the implementation of quality improvement strategies and provide generalizable scientific findings about the implementation of the quality

improvement strategy, related organizational changes, and their impact. There is increasing evidence that success in achieving quality improvement goals is at least partially attributable to implementation processes and contexts and not just to the nature of the quality improvement strategy. The research funded through this announcement may be conducted by the team designing/implementing the quality improvement strategy or it may be conducted by a separate team. The quality improvement strategy must be one that is expected to result in major improvements in health care delivery that will enhance patient outcomes. Research design and execution will yield results providing AHRQ, providers, patients, payers, policymakers, and the public with contextual details and high level of confidence about what works and what doesn't in improving health care in the United States.

Amount: varies but will not exceed \$300,000 annually

Active Living Research and RWJF New Connections

Robert Wood Johnson Foundation (RWJF)

Active Living Research is a national program of the Robert Wood Johnson Foundation (RWJF). The program supports research to inform policy and environmental strategies for increasing physical activity among children and adolescents, decreasing their sedentary behaviors and preventing obesity. We place special emphasis on strategies with the potential to reach children and youths ages 3 to 18 who are at highest risk for obesity: African-American, Latino, American Indian, Alaska Native, Asian-American and Pacific Islander children, as well as children who live in under-resourced and lower-income communities. Grants funded under this call for proposals (CFP) are expected to advance RWJF's efforts to reverse the childhood obesity epidemic by 2015.

This CFP consists of grant opportunities for specified research topics and dissertation awards. It also includes funding opportunities for New Connections grants made available through the Active Living Research program. New Connections grants through Active Living Research are for new investigators who have been historically disadvantaged or underrepresented in research activities. This includes

ethnic or racial researchers who are historically underrepresented, first-generation college graduates, and individuals from lower-income communities.

Enhancing Tumoricidal Activity of Natural Killer (NK) Cells by Dietary Components for Cancer Prevention (R01) [PA-08-131] and (R21) [PA-08-132]

PA-08-131 and PA-08-132

NIH

This funding opportunity announcement (FOA) is designed to stimulate research efforts aimed at establishing the physiological significance of dietary components in modulating the tumoricidal cell activity of natural killer (NK) cells for cancer prevention. The focus of research projects proposed in response to this FOA should be on defining the minimum quantity and duration of exposure to specific dietary components to modulate tumoricidal cell activity of NK cells for cancer prevention and the underlying mechanism(s) accounting for this response. Proposed projects must include animal and/or human investigations to be considered responsive to this announcement. Highly purified populations of immune cells, specific tumor cells such as RMA-S that lack class I MHC expression, target cell-free system, or single-cell assays may be used to define the molecular basis for the diet-induced changes in tumoricidal activity. However, the in vitro studies are only to be used to support in vivo studies and should not constitute the primary focus of the application. Molecular targets for food components may be examined at the sites of the tumoricidal cell receptors and cancer cell specific ligands, the output of tumoricidal cytokines (e.g., IFN-g), and the release of lytic granules such as a granzysin, perforin, and serine proteases (granzymes).

Office of Research on Women's Health (ORWH)

Office of Dietary Supplements (ODS)

This FOA issued by the National Institute on Aging (NIA), the National Heart, Lung, and Blood Institute (NHLBI), the National Institute of Nursing Research (NINR), the Office of Research on Women's Health (ORWH), and the Office of Dietary Supplements (ODS).

encourages Research Project Grant (R01) applications proposing to study bioenergetic factors underlying increased fatigability and activity limitations in aging. Increased fatigability is a significant cause of restricted physical and cognitive activity in older adults.

Alterations in bioenergetics—the production and utilization of energy, and the regulation of these processes—may contribute significantly to increased fatigability. This FOA encourages applications that propose to 1) elucidate specific alterations in bioenergetics related to increased fatigability and activity limitations; 2) develop and evaluate improved measures of fatigability related to bioenergetics; 3) evaluate interventions for increased fatigability and activity limitations that target alterations in bioenergetics and lead to improved quality of life.

Metals in Medicine (R01)

PA-08-251

National Institute of General Medical Sciences

National Cancer Institute

National Institute of Environmental Health Sciences

Office of Dietary Supplements

The objective of this Funding Opportunity Announcement (FOA), issued by the National Institute of General Medical Sciences (NIGMS), National Cancer Institute (NCI), National Institute of Environmental Health Sciences (NIEHS), and the Office of Dietary Supplements (ODS), National Institutes of Health is to encourage research that bridges the areas of inorganic chemistry and medicine. The mechanisms by which organisms control transition metal ions and the roles of these metals in cellular regulation and signaling in health and disease are of principal interest. The interactions of synthetic inorganic complexes with living systems and their components are an additional area of interest. These areas are linked by the need to involve researchers having a deep understanding of inorganic chemistry in medically relevant research. Much of the work is expected to involve collaborations including chemists, biologists, and medical researchers. The results will be relevant to understanding the mechanisms of metal handling by biological systems and the basic cellular roles underlying the nutritional requirement for essential metals. It is expected that this research will also contribute to the identification of new targets for drug discovery, diagnostics, and future therapeutic approaches involving metal complexes, although drug development, per se, is not a focus of the program.

Planning Grants for Translational Research for the Prevention and Control of Diabetes and Obesity (R34)

PAR-09-177

National Institute of Diabetes and Digestive and Kidney Diseases
Eunice Kennedy Shriver National Institute of Child Health and Human Development
Office of Behavioral and Social Science Research

The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD) and the Office of Behavioral and Social Sciences Research (OBSSR) encourage NIH Clinical Trial Planning Grant Program grant (R34) applications from institutions/ organizations to develop and pilot test translational interventions for the prevention and control of diabetes and obesity that have a high potential to be adopted, and sustained in applied health care settings. Research must be based on widely accepted interventions previously demonstrated to be efficacious in clinical trials. Research must target the prevention or reversal of obesity, prevention of type 2 diabetes, improved care of type 1 and type 2 diabetes, or the prevention or delay of the complications of these conditions. The interventions proposed under this FOA should have the potential to be widely disseminated to clinical practice, individuals and communities at risk.

Amount:

NIDDK Small Grants for Clinical Scientists to Promote Diversity in Health-Related Research (R03)

PAR-09-223

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Office of Dietary Supplements (ODS)

The purpose of this funding opportunity announcement (FOA) is to provide support for clinical scientists from underrepresented racial/ethnic backgrounds, disadvantaged backgrounds or clinical scientists with disabilities to conduct small research projects in the area of diabetes, endocrinology, metabolism, digestive diseases, hepatology, obesity, nutrition, kidney, urology, or hematology. The NIDDK and the ODS recognize the need to promote diversity in the health-related workforce by increasing the number of highly trained clinical researchers from diverse backgrounds conducting research in areas of importance to the NIDDK. This FOA is aimed at New Investigators (see Section III.1.B. for definition) who hold a health professional doctoral degree or other clinical doctoral degree AND who are from a group that have been shown to be underrepresented in biomedical research (see eligible PD/PI for full definition). The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

Amount: \$375,000

LOI: 30 days prior to application date

Home and Family Based Approaches for the Prevention or Management of Overweight or Obesity in Early Childhood (R21) and (R01)

PA-10-128 and PA-10-127

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart, Lung and Blood Institute (NHLBI)

Office of Behavioral and Social Sciences Research (OBSSR)

Office of Disease Prevention (ODP)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Heart, Lung and Blood Institute (NHLBI), the Office of Behavioral and Social Sciences Research (OBSSR) and the Office of Disease Prevention (ODP), National Institutes of Health, invites exploratory pilot/feasibility study and small clinical trial (R21) applications from institutions/organizations that propose to test novel home or family based interventions for the prevention or management of overweight in infancy and early childhood. Tested interventions can use behavioral (including dietary and physical activity), environmental, or other relevant approaches. Applications should focus on infants and young children (to age six years) and emphasize the role of home environment and the influence of family/extended family members and parents (including guardians/substantial care-providers) within the child's home environment. The direct goal of this initiative is to fund research that will advance knowledge for innovative approaches to the prevention or management of overweight in children less than 6 years of age, with potential for future research clinical trial applications either in the home or linked to a community setting. Research should consider the role of families in the initiation, support, and reinforcement of fundamental food and beverage consumption, physical activity practices, and sedentary behaviors. In addition it is of interest to elucidate various underlying behavioral determinants that are crucial to initiate or sustain changes in behaviors that impact energy balance. Research designs may include linkages with other settings (e.g., daycare, pre-school, or other community venues) or other care providers (e.g., health care providers or teachers) but must include infants or children less than age six years as the primary study participant along with parents, and/or other family members residing with the child. The overarching goal is to identify interventions that influence parent and child behaviors that contribute to inappropriate weight gain, and thereby improve subsequent health status in childhood, adolescence, and adulthood for which overweight is a known risk factor.

Prioritizing Molecular Targets for Cancer Prevention with Nutritional Combinations (R01)

PA-10-035

National Cancer Institute (NCI)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), invites research applications to enhance our understanding about the dynamic interrelationship that exists between bioactive food components (and/or combinations thereof) and cancer prevention. Although much evidence exists that dietary components are linked to cancer prevention, the interactions among dietary bioactive compounds and food combinations remains under-investigated. Applications are encouraged to consider either multiple dietary bioactive components, intact foods or multiple foods utilizing physiologically relevant concentrations of the agents. New genetic technologies may be employed to study the impact of dietary components on complex cellular and molecular networks, as part of the effort to better understand the basis for the multifaceted interactions of food components with cancer prevention mechanisms. Specifically, applications that apply new high-throughput genomic, epigenomic, proteomic, and metabolomic technologies to prioritize molecular targets of dietary components are highly encouraged. The sites of action that may be evaluated include carcinogen metabolism, DNA repair, cell proliferation, apoptosis, differentiation, hormonal regulation, energetics, inflammation, and/or angiogenesis. In addition, applications should either evaluate multiple molecular targets within a cancer process or multiple processes in order to prioritize which process(es) is/are most involved in bringing about a phenotypic change. It is hoped that advances in this area may assist in optimizing cancer prevention while minimizing potential toxicity due to food components. The resulting information will help define which foods or food components should be considered in isolation or in combination when developing dietary strategies to reduce cancer risk and/or modify tumor behavior.

PA-09-234 and PA-09-235

National Cancer Institute (NCI)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

Office of Dietary Supplements (ODS)

The aim of this funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI), the National Institute on Alcohol Abuse and Alcoholism (NIAAA), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), is to promote clinical and preclinical research to determine how diet and dietary factors, including dietary supplements, impact DNA methylation, histone posttranslational modification, noncoding RNA, and other epigenetic processes involved in cancer prevention and development. Another important aim of this FOA is to encourage collaborations between nutrition and epigenetic experts to study bioactive food components with cancer-preventative properties and to examine key epigenetic events in cancer processes (e.g.,

carcinogen metabolism, cell division, differentiation, and apoptosis) in order to begin to establish linkages between epigenetics, methylation patterns, and tumor incidences/behaviors.

Ancillary Studies in Clinical Trials (R01)

New

RFA-HL-10-024

National Heart, Lung, and Blood Institute (NHLBI)

The purpose of this Funding Opportunity Announcement (FOA) is to solicit research grant applications to conduct time-sensitive ancillary studies related to heart, lung, and blood diseases and sleep disorders in conjunction with ongoing clinical trials and other large clinical studies supported by NIH or non-NIH entities. The program establishes an accelerated review/award process to support the crucial time frame in which these ancillary studies must be performed. Time-sensitive ancillary studies include those that require active longitudinal data collection and thus need to begin recruiting subjects as close as possible to the start of the parent study. The ancillary study can address any research questions related to the mission of NHLBI for which the parent study can provide participants, infrastructure, and data. The parent studies most often will be a clinical trial, but also can be an observational study or registry that can provide a sufficient cohort of well-characterized patients. Each ancillary study application must demonstrate the time-sensitive nature of the proposal and must explicitly address why an expedited review is essential to its feasibility.

Amount: \$1,000,000

LOI: April 28, 2010, August 30, 2010, December 28, 2010

Deadline: May 28, 2010, September 30, 2010, January 28, 2011

Aetna 2010 Grant Program

New

Aetna Foundation

For 2010, the foundation will focus its grant making on issues that improve health and the healthcare system in three areas: obesity (addressing the rising rate of obesity among U.S. adults and children); racial and ethnic healthcare equity (promoting equity in health and health care for common chronic conditions and infant mortality); and integrated health care (advancing high-quality health care by improving care coordination and communications among healthcare professionals, creating informed and involved patients, and promoting cost-effective, affordable care). Grant applications that address more than one of these areas will receive priority consideration.

Within the three program areas, the foundation will award the following types of grants: research grants to generate new knowledge, making use of either quantitative or qualitative techniques; project grants to test, apply, or disseminate new practices designed to improve health and health care; and policy grants to analyze and promote policies to ensure that programs and practices to improve health and health care can be replicated and disseminated broadly. In addition, the foundation will consider applications for sponsorship of fundraising events such as galas and walks, outreach activities (e.g., health fairs), and other community-based health and wellness initiatives aligned with the foundation's funding priorities.

Amount: up to \$250,000

LOI: Required for grant requests over \$50,000

Long Acting, Sustainable Therapies of Opiate Addiction (R01)

PAS-08-061

NIDA

This Funding Opportunity Announcement (FOA) issued by the National Institute on Drug Abuse, National Institutes of Health, encourages Research Project Grant (R01) applications from institutions/organizations that propose the development of sustained pharmacotherapies and behavioral treatments to reduce the risk of contraction and transmission of HIV. Specifically, this FOA supports applications directed at the development of (1) heroin/morphine-protein conjugates (heretofore referred to as heroin/morphine conjugate vaccines or HCVs) for the treatment of opiate addiction, (2) clinical systems for the application of currently available long-acting (30-day or longer sustained-release) dosage forms for opiate pharmacotherapies to optimize these sustained pharmacotherapies to effect the reduction of the risk for acquisition and transmission of HIV, and (3) effective clinical treatment modalities, including behavioral treatment in conjunction with pharmacotherapies, to improve the effectiveness of opiate treatment and reduce the risk behaviors associated with transmission of HIV. Clinical studies should include the assessment of HIV risk behaviors as an outcome measure.

Silvio O. Conte Centers for Basic and Translational Mental Health Research (P50)

PAR-08-194

National Institutes of Health (NIH)

National Institute of Mental Health (NIMH)

The National Institute of Mental Health (NIMH) invites applications for Conte Centers for Basic and Translational Mental Health Research. The purpose of these Centers is to support interdisciplinary teams of researchers engaging in integrative, novel, and creative experimental approaches to address high-risk, high-impact questions that will significantly advance the state of the science in brain and behavioral research relevant to mental health. Conte Centers comprise a collaborative, cutting-edge, interdisciplinary research program conducted at multiple levels of analysis spanning from genes to behavior to disease in humans, animals, and model systems, from infancy to adulthood as appropriate, based on a well-defined and unified scientific question (hypothesis) or problem. Areas of interest span the full range of basic neuroscience, basic behavioral science, genetics research, and proof-of-concept clinical trials, as well as the translational integration of neuroscience and behavioral science with study of the etiology, pathogenesis, and/or the developmental progression of mental disorders across the lifespan. Proposed Centers should be directed towards a well-defined and unified scientific question or problem and in some instances may include discovery-based as well as technology development components.

Amount: \$10,750,000

SHIFT Award: Small Businesses Helping Investigators to Fuel the Translation of Scientific Discoveries [SBIR: R43/R44]

PA-10-122

National Institutes of Health (NIH)

multiple institutes

The primary objectives of the SHIFT SBIR initiative are: (1) to foster research that is translational in nature and (2) to transform academic scientific discoveries into commercial products and services. Academic researchers can be a driving force for new products and services in a small business concern (SBC). A major feature of the SHIFT program includes the requirement for an investigator who is primarily employed by a United States research institution at the time of application to transition to a small business concern (SBC) and be primarily employed (more than 50% time) by the SBC by or at the time of award. A SHIFT SBIR grant enables an SBC to increase both its scientific research staff and its core competencies. The Project Director/Principal Investigator (PD/PI) may also facilitate SBC licensing of intellectual property (IP) from the PD/PI's prior academic institutions, promote collaboration opportunities with academic investigators, and enable better access to academic resources.

Amount: up to \$2,250,000

Research on Malignancies in the Context of HIV/AIDS (R21)

PA-07-454

National Institutes of Health (NIH)

The National Cancer Institute (NCI) and National Institute of Dental and Craniofacial Research (NIDCR) are accepting proposals for research that will advance our understanding of the risks, development, progression, diagnosis, and treatment of malignancies observed in individuals with an underlying HIV infection or AIDS. Through this funding opportunity announcement (FOA), the NCI and NIDCR seek to encourage research in areas such as the study of the etiologic factors, cofactors, pathogenesis, and consequences of HIV-associated malignancies in diverse populations. Research on non-AIDS defining malignancies in the context of HIV infection is also encouraged. The incidence of non-AIDS-defining malignancies (e.g., anal, skin, and lung cancers as well as Hodgkin's disease) appear to be increasing in the era of Highly Active Antiretroviral Treatment. This FOA extends to research efforts that will provide information on the clinical outcomes of such cancers in the HIV-infected population and identify specific contributions resulting from HIV infection for the development and pathogenesis of these cancers. Ultimately, such efforts could inform screening approaches and therapies targeted to the HIV-infected population.

Drug Abuse Epidemiology and Services Research in Cooperation with the Clinical and Translational Science Awards Consortium (R01)

PAS-09-001

National Institute on Drug Abuse (NIDA)

Through this program announcement with set aside (PAS), the National Institute on Drug Abuse (NIDA) invites applicants to develop innovative drug abuse epidemiology or health services research in cooperation with academic centers supported through the NIH Clinical and Translational Science Awards (CTSA) consortium. A major NIH initiative, the CTSA consortium is transforming how clinical and translational research is conducted, building an infrastructure for multidisciplinary researchers and clinicians to perform research and develop new treatments more efficiently. As a part of this infrastructure, CTSA sites have established partnerships with a range of clinical settings and have access to large, multi-generational population cohorts. These features of the CTSA sites offer a unique opportunity for researchers to integrate drug abuse epidemiology and health services research in these settings. Applicants are asked to propose innovative drug abuse research which builds upon the resources available at CTSA sites, resources which would include CTSA efforts to strengthen networks of clinical sites and to establish innovative information technologies, phenotyping systems, and

biobanks. A broad range of drug abuse epidemiology and health services research areas will be supported under the auspices of this FOA.

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

National Center for Complementary and Alternative Medicine (NCCAM)

National Institute on Aging (NIA)

National Institute of Arthritis and Musculoskeletal and Skin Diseases (NIAMS)

The purpose of this Funding Opportunity Announcement (FOA), "Mechanisms, Models, Measurement, & Management in Pain Research" issued by the National Institute of Nursing Research (NINR), in conjunction with members of the NIH Pain Consortium as listed above, is to inform the scientific community of the pain research interests of the various Institutes and Centers (ICs) at the National Institutes of Health (NIH) and to stimulate and foster a wide range of basic, clinical, and translational studies on pain as they relate to the missions of these ICs. New advances are needed in every area of pain research, from the micro perspective of molecular sciences to the macro perspective of behavioral and social sciences. Although great strides have been made in some areas, such as the identification of neural pathways of pain, the experience of pain and the challenge of treatment have remained uniquely individual and unsolved. Furthermore, our understanding of how and why individuals transition to a chronic pain state after an acute insult is limited. Research to address these issues conducted by interdisciplinary and multidisciplinary research teams is strongly encouraged, as is research from underrepresented, minority, disabled, or women investigators.

Research on Clinical Decision Making in People with or at Risk for Life-Threatening Illness (R01) and (R21)

PA-09-122 and PA-09-121

National Institute of Nursing Research (NINR)

National Cancer Institute (NCI)

This funding opportunity announcement (FOA) issued by the National Institute of Nursing Research (NINR) and the National Cancer Institute (NCI), National Institutes of Health, seeks to stimulate research on the decision-making processes made by persons at risk for and those faced with life-threatening illness. These illnesses are ones that almost always lead to death in a fairly short period of time if left untreated, but may be chronic or even cured if dealt with early in the disease process. An example of a life-threatening illness that may be chronic for some years would be HIV infection when treated. An example of a life-threatening illness that may be cured in its early stages would be breast cancer. Decision-making can occur from the point of adopting preventive behaviors through the end of life. Examples of such decisions could include participating in an HIV vaccine clinical trial, testing for genetic disorder, choosing a treatment intervention vs. watchful waiting (as in early stage prostate cancer), choosing a treatment intervention among several options, joining a therapeutic clinical trial, or making end-of-life care decisions.

PAR-09-173

National Institute of Mental Health (NIMH)

The purpose of this Funding Opportunity Announcement (FOA) is to encourage research on 1) the development and/or pilot testing of new or adapted interventions, 2) the adaptation and/or pilot testing of interventions with demonstrated efficacy for use in broader scale effectiveness trials, or 3) innovative services research directions that require preliminary testing or development. The R34 award mechanism provides resources for evaluating the feasibility, tolerability, acceptability and safety of novel approaches to improving mental health and modifying health risk behavior, and for obtaining the preliminary data needed as a pre-requisite to a larger-scale (efficacy or effectiveness) intervention or services study. NIMH intervention and services research is aimed at preventing or ameliorating mental disorders, emotional or behavioral problems, the co-occurrence of mental, physical and substance abuse problems, HIV infections, and the functional consequences of these problems across the life span.

Amount: \$450,000

LOI: N/R

Pilot and Feasibility Clinical Research Grants in Diabetes, Endocrine and Metabolic Diseases (R21)

PA-09-133

National Institute of Diabetes and Digestive and Kidney Diseases
Office of Dietary Supplements

This FOA, issued by National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the Office of Dietary Supplements (ODS) of the National Institutes of Health, encourages exploratory/developmental clinical research related to the prevention or treatment of diabetes, obesity and endocrine and genetic metabolic diseases. The Pilot and Feasibility Clinical Research Grants Program is designed to allow initiation of exploratory, short-term clinical studies, so that new ideas may be investigated without stringent requirements for preliminary data. The short-term studies should focus on research questions that are likely to have high clinical impact. They can include testing a new prevention strategy, a new intervention, or unique combinations of therapies. A high priority is the use of such studies to help stimulate the translation of promising research developments from the laboratory into clinical practice in diabetes, endocrine diseases and genetic metabolic diseases, including cystic fibrosis.

Amount: \$275,000

LOI: N/R

Deadline: Standard dates apply

Key Words: **Diabetes, Cystic Fibrosis, Metabolic Disease**

Diet Composition and Energy Balance (R01)

PA-07-218

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Cancer Institute (NCI)

National Center for Complementary and Alternative Medicine (NCCAM)

National Heart, Lung and Blood Institute (NHLBI)

National Institute on Aging (NIA)

The goal of this funding opportunity announcement (FOA) is to invite Research Project Grant (R01) applications investigating the role of diet composition in energy balance, including studies in both animals and humans. Both short and longer-term studies are encouraged, ranging from basic studies investigating the impact of micro- or macronutrient composition on appetite, metabolism, and energy expenditure through clinical studies evaluating the efficacy of diets differing in micro- or macronutrient composition, absorption, dietary variety, or energy density for weight loss or weight maintenance.

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) (<http://www2.niddk.nih.gov>)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute of Nursing Research (NINR)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Institute on Alcohol Abuse and Alcoholism (NIAAA), the National Institute of Nursing Research (NINR), and the Office of Dietary Supplements (ODS) of the National Institutes of Health, will provide resources to validate candidate biomarkers for well-defined human diseases of the liver, kidney, urological tract, and digestive and hematologic systems, as well as endocrine and metabolic disorders, diabetes and its complications, and obesity, for which there are no or very few biomarkers, or for which standard biomarkers are currently prohibitively invasive or expensive. A biomarker is an indicator of a disease process, and could replace hard clinical end points as a measure of the effect of new therapies. Appropriate studies will validate candidate biomarkers in well-defined patient populations, provide new technologies to monitor biomarkers or establish reliable assays for validated markers. Progress in this area has the potential to advance translational research related to efficacy of treatments and bio-behavioral interventions. This FOA is not appropriate for biomarker discovery projects.

Pilot and Feasibility Clinical Research Grants in Kidney or Urologic Diseases (R21)

PAR-09-077

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

This FOA issued by the National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health, encourages Exploratory/Development Research Grants (R21) that propose small scale or pilot and feasibility clinical and translational research studies, including epidemiological studies or clinical trials related to kidney or urologic disease research that address important clinical and translational questions and are potentially of high clinical and public health impact. It is anticipated that some projects supported by these grants may lead to full-scale clinical studies including diagnostic strategies, epidemiological studies, or randomized clinical trials of diagnosis, prevention, or treatment of kidney or urologic diseases.

NIDCR Clinical Trial Planning Grant (R34)

PAR-08-195

National Institute of Dental and Craniofacial Research (NIDCR)

This FOA, issued by the National Institute of Dental and Craniofacial Research (NIDCR), National Institutes of Health, will support clinical trial planning (R34) grants for the comprehensive planning, design and documentation of investigator-initiated Phase I, II, III, or IV interventional clinical trials. Interventional behavioral studies, sometimes referred to as Stage I, II, III or IV studies, are included. The R34 planning grant is designed to: (1) permit early peer review of the rationale for the proposed clinical trial; (2) permit early assessment of the design and implementation plans of the proposed trial; and (3) provide support for the development of a comprehensive clinical trial protocol and associated documents including a Manual of Procedures. The complete protocol and associated documents are required components of any subsequent clinical trial implementation (U01) application. The product of the R34 will be either an application for a clinical trial implementation cooperative agreement (U01) or a report summarizing the work completed and the reasons for not proceeding to a clinical trial implementation application. Pre-approval from the NIDCR is required for the submission of the R34 application.

Collaborative Research on the Transition From Acute to Chronic Pain: New Models and Measures in Clinical and Preclinical Pain Research (R01)

RFA-DE-11-001

National Institute of Dental and Craniofacial Research (NIDCR)

The overall goal of this FOA is to stimulate preclinical and clinical research that will accelerate our understanding of the biological and behavioral determinants driving the transition from acute pain to chronic pain disorders. An understanding of the mechanisms and risk factors that determine who will transition to a chronic pain state is necessary in order to intervene in this transition and to design new, effective treatments to resolve acute pain before it becomes chronic. The objectives of this FOA are to: 1) assemble research teams with expertise in basic and clinical pain research and related expertise outside the pain field that will provide novel, collaborative, multidisciplinary approaches to answer crucial questions about the transition from acute to chronic pain; 2) discover biological and behavioral mechanisms that drive the transition from an acute pain state to a chronic dysfunctional pain condition; 3) develop new clinical and preclinical models and measures of pain that will be essential to identify and characterize these mechanisms. Studies that involve considerable risk but with the potential for breakthroughs in the field are strongly encouraged.

Innovation in Molecular Imaging Probes (R01)

PAR-09-016

National Institute of Biomedical Imaging and Engineering

National Institute on Aging

National Institute of Arthritis and Musculoskeletal and Skin Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute

This FOA is issued by the National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health. This FOA is a follow up of a previous Roadmap RFA (RM-04-021 "Innovation in Molecular Imaging Probes"). The purpose of this initiative is to

encourage the development of novel molecular imaging approaches that can detect and image specific molecular activities in vivo, and have the potential for clinical applications. Novel molecular imaging approaches developed through this initiative can focus on one (or both) of the following long-term translational goals: (1) imaging the characteristic markers, and function, of normal cells in control human subjects and patients, and (2) imaging the characteristic markers, and biochemical or physiological abnormalities, of disease cells in patients. Potential abnormalities that could provide early markers for disease include (but are not restricted to): inflammation, fibrosis, immune cell activation, altered signal transduction pathways, altered gene expression pathways, and altered post-translational modification of proteins. This initiative solicits applications that explore innovative "high-impact" approaches, rather than incremental technology development that is already supported by current NIH programs.

ARRA OS Recovery Act Limited Competition: Impact of Decision-Support Systems on the Dissemination and Adoption of Imaging-Related Comparative Effectiveness Findings (UC4)

RFA-OD-10-012

National Institute of Biomedical Imaging and Bioengineering (NIBIB/NIH)

The goal for this program is to accelerate dissemination and adoption of current imaging-related comparative effectiveness research findings by studying whether real-time decision support systems integrated into clinical health IT systems are an effective means of disseminating evidence-based findings. Successful adoption is considered to be an integrated system which is routinely used by clinicians as part of their workflow and efficiently and effectively assists them in making well-informed decisions. The long-term goal, beyond the scope of this program, is to provide models for how these systems can be incorporated into healthcare providers nationwide if they are shown to be an effective method for disseminating CER-findings.

With a project duration of only two years, applicants must have sufficient health IT infrastructure without existing clinical decision support systems incorporating CER findings to be in a position to meet the objectives of this announcement. Applicants are encouraged to work with institutions with clinical decision support systems incorporating CER findings and/or vendors to meet milestones. Healthcare systems in IDeA states and those serving vulnerable and underserved populations are strongly encouraged to apply.

Amount: \$1,000,000

NEI Clinical Study Planning Grant Program (R34)

PAR-10-017

National Eye Institute (NEI)

The National Eye Institute (NEI) supports large-scale clinical vision research projects, including randomized clinical trials and epidemiologic studies. At the time of submission, applications requesting support for these activities are expected to provide detailed information regarding the study's rationale, design, analytic techniques, protocols and procedures, facilities and environment, organizational structure, and collaborative arrangements. This information is best conveyed in a well-documented Manual of Procedures (MOP), the development of which represents a costly and time-consuming activity. The Clinical Study Planning Grant is designed to facilitate activities central to the refinement of a study's protocol and procedures and the development of a detailed MOP. The NEI Clinical Study Planning Grant may be used to support the development of a MOP, as well as to conduct preliminary studies to refine study procedures and/or assess recruitment potential. The Clinical Study Planning Grant is applicable to both epidemiologic and clinical trial research studies.

Small Grants for Behavioral Research in Cancer Control (R03)

PA-09-003

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute of Nursing Research (NINR), at the National Institutes of Health (NIH), is intended to provide support for either new investigators in cancer-related behavioral research, or investigators who want to refocus their research interests toward behavioral research in cancer control. The program is designed to facilitate the growth of a nationwide cohort of scientists with research experience in behavioral cancer control and design of public health interventions. Preliminary data for the proposed projects are not required. Overarching goals are to: (1) encourage new investigators to enter the field of behavioral research in cancer control and initiate their long-term career development aimed at becoming independent investigators in the field, and (2) support research on transfer of behavioral science knowledge into cancer control practice.

Amount: \$100,000

Pilot and Feasibility Awards Research Grants

LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award

Cystic Fibrosis Foundation Therapeutics, Inc. (CFFT)

The CF Foundation (CFF) offers competitive awards for research related to cystic fibrosis. Studies may be carried out at the subcellular, cellular, animal, or patient levels. Two of these funding mechanisms include Pilot and Feasibility Awards and Research Grants. Since these applications are reviewed by the CFF's Research and Research Training Committee, those proposals that include methodologies requiring sampling of materials from human subjects will only be considered under this mechanism if the sampling method constitutes minimal patient risk (e.g., venipuncture) and patient samples or data are anonymous.

For applications where more invasive procedures are proposed or where patient samples or data will not be anonymous, please submit a Letter of Intent for a Clinical Research Award.

Also, the CF Foundation offers physician-scientist training awards, including the LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award.

Amount: varies

LOI: the CF Foundation will consider NIH applications that have received a competitive score but missed the payline under the CFF/NIH-unfunded award mechanism. These applications are accepted on an on-going basis.

Deadline: first Wednesday in September

Recovery Act Limited Competition: The NIH Director's ARRA Funded Pathfinder Award to Promote Diversity in the Scientific Workforce (DP4)

RFA-OD-10-013

All NIH Institutes and Centers participate in this NIH-wide announcement.

This NIH Funding Opportunity Announcement (FOA), supported by funds provided to the NIH under the American Recovery and Reinvestment Act of 2009 (Recovery Act or ARRA), Public Law 111-5, invites applications for the NIH Directors ARRA Pathfinder Award to Promote Diversity in the Scientific Workforce. The NIH recognizes a unique and compelling need to promote diversity in the biomedical, behavioral, clinical and social sciences research workforce. The NIH expects all of its efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups; to improve the quality of the educational and training environment; to balance and broaden the perspective in setting research priorities; to improve the ability to recruit subjects from diverse backgrounds into clinical research protocols; and to improve the Nation's capacity to address and eliminate health disparities. This new FOA introduces a new research grant program to encourage exceptionally creative individual scientists to develop highly innovative and possibly transforming approaches for promoting diversity within the biomedical research workforce. To be considered highly innovative, the proposed research must reflect ideas substantially different from those already being pursued or it must apply existing research designs in new and innovative ways to unambiguously identify factors that will improve the retention of students, postdocs and faculty from diverse backgrounds. Awardees must commit a major portion (generally 30% or more) of their research effort to activities supported by the Directors Pathfinder Award and the proposed research must be endorsed by the highest levels of institutional management.

Amount: \$2,000,000

LOI: April 5, 2010

Prevention and Management of Healthcare Associated Infections (R18)

PA-10-089

Agency for Healthcare Research and Quality (AHRQ)

The purpose of this funding opportunity is to fund extramural health services research, demonstration, dissemination, and evaluation grants that propose to prevent and more effectively manage healthcare associated infections (HAIs).

Research priorities for this FOA are the: 1) development, implementation and demonstration of the prevention and management of HAIs, along with the determination of the costs of such interventions; 2) determination of the efficacy, effectiveness, and costs of preventative interventions; 3) population-level studies on the patient risk factors, clinical presentation, sources, and disease genotypes of antibiotic-resistant organisms that can result in perceived HAIs. The scientific and practical knowledge to be achieved through these research and demonstration efforts will identify the practical and cost-effective approaches to preventing and managing HAIs.

Amount: \$1,500,000

2010-11 Scholars Program in Youth Settings Research

New

William T. Grant Foundation

An initiative of the William T. Grant Foundation, the William T. Grant Scholars Program is accepting applications from promising early-career researchers who want to tackle questions important to theory and either policy or practice for improving youth settings.

The program is designed to support promising early-career researchers from diverse disciplines who have demonstrated success in conducting high-quality research and are seeking to further develop and broaden their expertise. The foundation is interested in applicants trained across a range of social, behavioral, and health sciences. Applicants must submit a project that is consistent with the foundation's current research interests: addressing issues that have compelling relevance for theory and policies or practices affecting the settings of youth between the ages of 8 and 25 in the United States or a vulnerable sub-population of those youth.

Amount: \$350,000

LOI: N/R

Deadline: July 7, 2010

To learn more: http://www.wtgrantfoundation.org/funding_opportunities/fellowships/william_t_grant_scholars

Key Words: **Settings, Youth Development, Youth Policy, Identity Development**

Family Services Community Grants Program

New

Autism Speaks

Autism Speaks is accepting grant applications for its Family Services Community Grants program for projects that promote services that enhance the lives of those affected by autism spectrum disorders. The focus of these grants will be on proposals that serve to build the field of services for individuals with autism and expand the capacity to effectively serve this growing community.

Autism Speaks will accept family services community grant proposals that address one of three areas of need — education, recreation/community activities, and young adult/adults services. Successful applicants will apply grant funding to support new programs or the expansion of existing projects.

Amount: up to \$25,000

LOI: June 10, 2010

Deadline: June 25, 2010

To learn more: http://www.autismspeaks.org/community/family_services/grants.php

Key Words: **Autism, ASD, Autism Spectrum Disorders**

Department of Defense Autism Research Program

U.S. Army Medical Research

The FY09 ARP encourages proposals that specifically address critical needs of the Autism Spectrum Disorders (ASD) community in the following areas (Revised for FY09):

- Co-morbidity: (e.g., manifestations such as disorders [gastrointestinal, sleep, behavioral, speech/language], psychiatric, seizures, immune dysfunction, motor and sensory deficits, metabolic dysfunction, and effects of ASD on intellectual ability)
 - Predictors for Treatment Outcomes: Identification of biomarkers, clinical characteristics, or other phenotypic markers that predict outcomes of a treatment, or populations that will or will not respond to a treatment (traditional or complementary and alternative)
- FY09 ARP program announcements and application instructions for the following award mechanisms are anticipated to be posted and available on Grants.gov in February 2009.

Amount: \$750,000

LOI: pre-application required

Deadline: posting early February

Healthy Eating Research: Building Evidence to Prevent Childhood Obesity

Robert Wood Johnson Foundation (RWJF)

Healthy Eating Research is a national program of the Robert Wood Johnson Foundation (RWJF). The program supports research on environmental and policy strategies with strong potential to promote healthy eating among children to prevent childhood obesity, especially among lower-income and racial and ethnic populations at highest risk for obesity. Findings are expected to advance RWJF's efforts to reverse the childhood obesity epidemic by 2015.

The three types of funding opportunities included in this call for proposals (CFP) are Round 5 grants, rapid-response grants and New Connections grants through Healthy Eating Research. The broad topics and types of studies are described in the complete CFP.

Amount: \$up to \$170,000

LOI: N/R

Deadline: May 13, 2010 for Round 5 Grants and New Connections

March 15-September 1, 2010 for Rapid-Response Grants

Genetic Susceptibility and Variability of Human Structural Birth Defects (R01)

PA-08-011

NICHHD, NIDCR, NIEHS

This Funding Opportunity Announcement (FOA) encourages innovative investigator-initiated applications designed to study fundamental developmental processes using animal models in conjunction with translational/clinical approaches with the goal of advancing our understanding of the etiology of structural birth defects. In 2000, the Developmental Biology, Genetics and Teratology Branch at NICHD began its Birth Defects Initiative with the funding of a number of research grants and program projects focused on the use of molecular genetic approaches for the study of genetic susceptibility, epidemiology, and developmental biology of human congenital structural malformations. These grants established the basis for a working group of investigators, who meet annually to present research updates, share ideas and technical advances, establish new collaborations, and provide input and advice to NICHD staff. Applicants funded through this FOA will join the NICHD's Birth Defects Special Interest Group and participate in annual meetings designed to provide a forum to discuss research progress, exchange ideas, share resources, and foster collaborations relevant to the goals of the NICHD's Birth Defects Initiative.

Amount: unspecified

NIH Small Research Grant Program (Parent R03)

PA-10-064

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Investigator-Initiated Small Grant (R03) funding opportunity supports small research projects that can be carried out in a short period of time with limited resources. Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated small grant applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The R03 grant mechanism supports different

types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

Amount: \$100,000

Key Words: **Children, Palliative Care**

Basic and Clinical Studies of Congenital Urinary Tract Obstruction (R01)

PA-09-226

National Institute of Diabetes and Digestive and Kidney Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

This Program Announcement is sponsored by the NIDDK and the NICHD. Congenital obstructive uropathy is one of the major causes of chronic kidney disease and end stage renal disease (ESRD) in infants and children. The pathogenesis of this disorder, however, remains poorly understood. Many controversies and clinical uncertainties exist in the detection, prognosis, and effective treatment strategies for this condition. The impact of early fetal detection and neonatal intervention, the long-term effects of watchful waiting and the various surgical interventions have not been well studied and documented. There is also no consensus on the indications for, or ideal timing of surgical intervention. The purpose of this funding opportunity is to address the numerous scientific and clinical uncertainties related to the development, treatment and prognosis of congenital obstructive uropathy, by encouraging and facilitating research in diverse areas. These areas include: the development of objective prognostic markers; the genetic determinants of this congenital disorder; the development of reliable animal models of the disorder; and, evaluation of the long-term effectiveness of various treatment strategies.

Amount: \$2,500,000

LOI: N/R

Deadline: Standard dates apply

Home and Family Based Approaches for the Prevention or Management of Overweight or Obesity in Early Childhood (R21) and (R01)

PA-10-128 and PA-10-127

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart, Lung and Blood Institute (NHLBI)

Office of Behavioral and Social Sciences Research (OBSSR)

Office of Disease Prevention (ODP)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Heart, Lung and Blood Institute (NHLBI), the Office of Behavioral and Social Sciences Research (OBSSR) and the Office of Disease Prevention (ODP), National Institutes of Health, invites exploratory pilot/feasibility study and small clinical trial (R21) applications from institutions/organizations that propose to test novel home or family based interventions for the prevention or management of overweight in infancy and early childhood. Tested interventions can use behavioral (including dietary and physical activity), environmental, or other relevant approaches. Applications should focus on infants and young children (to age six years) and emphasize the role of home environment and the influence of family/extended family members and parents (including guardians/substantial care-providers) within the child's home environment. The direct goal of this initiative is to fund research that will advance knowledge for innovative approaches to the prevention or management of overweight in children less than 6 years of age, with potential for future research clinical trial applications either in the home or linked to a community setting. Research should consider the role of families in the initiation, support, and reinforcement of fundamental food and beverage consumption, physical activity practices, and sedentary behaviors. In addition it is of interest to elucidate various underlying behavioral determinants that are crucial to initiate or sustain changes in behaviors that impact energy balance. Research designs may include linkages with other settings (e.g., daycare, pre-school, or other community venues) or other care providers (e.g., health care providers or teachers) but must include infants or children less than age six years as the primary study participant along with parents, and/or other family members residing with the child. The overarching goal is to identify interventions that influence parent and child behaviors that contribute to inappropriate weight gain, and thereby improve subsequent health status in childhood, adolescence, and adulthood for which overweight is a known risk factor.

Adherence Studies in Adolescents with Chronic Kidney or Urologic Diseases, or Diabetes (R01)

RFA-DK-10-004

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Adherence to a prescribed treatment regimen, including medications, devices and behavioral recommendations, can significantly impact morbidity and mortality for patients with chronic diseases, including chronic kidney or urologic disease and diabetes. When adherence to complex and seemingly rigid treatment regimens is poor, the results can be tragic. Adolescence can also be a particularly challenging time for adherence given the competing demands in an adolescent's life, the unique developmental changes, and rapidly changing set of responsibilities as they transition to adulthood. There are few studies in pediatrics beyond the HIV literature that address non-adherence. The purpose of the FOA is to support research to improve adherence in adolescents with chronic kidney or urologic diseases, or diabetes. Therefore, the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) invites applications from new or established investigators to pursue research to better understand factors that influence adherence, develop appropriate measures of adherence, and test innovative strategies to enhance adherence in this vulnerable population.

Pharmacokinetic Research in Pediatric HIV/TB Co-Infection (R01) and (R21)

RFA-HD-09-015 and RFA-HD-09-016

Eunice Kennedy Shriver National Institute of Child Health and Human Development
National Institute of Mental Health (NIMH)

This Funding Opportunity Announcement (FOA), issued by the National Institute of Child Health and Human Development (NICHD) and the National Institute of Mental Health (NIMH), encourages Research Project Grant (R01) applications from institutions/organizations that propose to evaluate the pharmacokinetics of anti-tuberculosis (anti-TB) drugs and pharmacokinetic drug interactions between anti-TB drugs and anti-HIV medications, and to potentially provide preliminary data regarding the effect of such pharmacokinetic parameters on the outcome of treatment in children with HIV/TB co-infection. Pediatric research in these areas lags far behind that in adults due to the many challenges surrounding the diagnosis and management of TB disease in children. Research related to the treatment of TB in the context of pediatric HIV/TB co-infection is urgently needed. This FOA will support grants to define appropriate dosing of anti-TB agents in HIV-infected children and that will generate knowledge regarding the optimization of management of TB/HIV co-infection in children, including the management of central nervous system (CNS) involvement with TB through the evaluation of CNS penetration of anti-TB agents in the context of antiretroviral therapy.

Amount: \$2,000,000; varies with project

Pharmacy and Pharmacology Research

Critical Challenges in Parkinson's Disease

New

Michael J Fox Foundation (MJFF)

The foundation has announced that up to \$5.75 million in total funding will be available through three 2010 Critical Challenges: Alpha-synuclein Therapeutics — A total of \$3 million in funding is available for pre-clinical projects to accelerate therapeutic development of the PD-implicated gene alpha-synuclein, which many researchers believe holds potential to lead to a new treatment that could slow or stop the progression of PD.

Pharmacodynamic Biomarkers of LRRK2 Activity — A total of \$2 million in funding is available for efforts to develop drug-activity biomarkers that can improve outcomes from future clinical trials of treatments targeting the PD-implicated gene LRRK2. The foundation will give preference to proposals seeking to verify and validate promising, pre-defined candidate LRRK2-associated biomarkers.

Novel Hypotheses in Parkinson's Disease: Investigating Clinical Data and Human Tissue — A total of \$750,000 is available to provide scientists around the globe with the opportunity to collaborate with the Arizona Parkinson's Disease Consortium. Funded investigators should propose drug development projects that can benefit from access to APDC's exceptional bank of well-characterized biologics, postmortem tissue, and associated clinical data.

Amount: unspecified

Advancing Regulatory Science through Novel Research and Science-Based Technologies (U01)

RFA-RM-10-006

National Institutes of Health (NIH)

U.S. Food and Drug Administration (FDA)

This FOA, issued by the National Institutes of Health, encourages applications from institutions/organizations that propose to study the applicability of novel technologies and approaches towards the development and regulatory review of medical products (including drugs, biologics, and devices). This regulatory science initiative will foster the development, evaluation and availability of new or improved tools, methods, standards, and applied science that support a better understanding and improved evaluation of product safety, quality, effectiveness, and manufacturing throughout the product life cycle. This area of science has knowledge gaps that deserve special emphasis and would benefit from strategic coordination and planning by NIH and FDA. Advances in this area depend on the incorporation of cutting-edge science and evidence-based knowledge into regulatory decision making. Support through this FOA for regulatory science research will facilitate the translation of biomedical discoveries to improve prevention, treatment, and diagnosis of human health problems.

Amount: \$1,125,000

LOI: March 27, 2010

Ruth L. Kirschstein National Research Service Awards for Individual Predoctoral Fellows in PharmD/PhD Programs (F31)

PA-09-029

National Institutes of Health (NIH)

The National Institute of General Medical Sciences (NIGMS) will provide individual predoctoral research training fellowship awards to promising pharmacy students who are enrolled in a PharmD/PhD degree program whose dissertation projects are in areas relevant to the research mission of NIGMS. Applicants must have a baccalaureate degree and must be enrolled in a formally combined PharmD./PhD program in the biomedical, behavioral, or clinical sciences. Applicants must be at the dissertation research stage of their doctoral training. Applicants must also show evidence of both high academic performance in the sciences and substantial interest in areas of high priority to NIGMS.

Amount: annual stipend (\$20,772)

LOI: N/R

Deadline: Standard dates for Individual Kirschstein-NRSA awards apply.

Key Words: Fellowship, Pre-Doctoral, Thesis, PharmD/PhD

Developmental Pharmacology (R03)

PAR-08-215

National Institutes of Health (NIH)

The purpose of this initiative is to encourage research to enhance our understanding of influences of development on mechanisms of drug action, pharmacodynamics, and drug biotransformation, prenatally and from birth through adolescence in appropriate in vivo or in vitro experimental systems including both human and animal models. In addition, because drugs are now being developed which target specific receptors or modulators (including those which may influence both safety and efficacy endpoints), it is imperative to determine their functional expression across the course of development. Successful applications should be designed around a central theme of ontogeny of processes, including cell division and differentiation, that have pharmacologic and clinical relevance, with emphasis on the interaction or relationships between these processes (e.g., drug metabolism and drug transport, receptors and ion channels, receptors and pharmacologic ligands) and application to the study of drugs in children and developing animals.

Amount: \$100,000

LOI: Optional letters of intent are due April 23, 2010

Deadline: May 21, 2010

2010 NIDA Translational Avant-Garde Award for Medication Development for Diseases of Addiction (DP1)

RFA-DA-10-013

National Institute on Drug Abuse (NIDA)

The NIDA Translational Avant-Garde Award is designed to support dedicated and talented basic and/or clinical researchers with the vision, drive and expertise necessary to translate research discoveries into medications for the treatment of diseases of addiction. Through this funding FOA, the National Institute on Drug Abuse (NIDA) is committed to making significant advances in the development of safe and efficacious products for the treatment of disorders stemming from tobacco, cannabis, cocaine, methamphetamine, heroin, or prescription opiate use or abuse. These products can be pharmaceuticals (small molecules) or biologics. Biologics include medicinal products such as vaccines and recombinant therapeutic proteins created by biological processes. Applications may focus on the pharmacotherapy of one or various disorders. Applications may also focus on the specific symptoms of the disorder such as withdrawal, craving or relapse. Testing of new formulations of marketed medications that are available for other indications, or new combinations of existing medications, which may be promising candidates for the treatment of diseases of addiction is within the scope of this FOA. The 2010 Translational Avant-Garde Award competition will proceed in two phases. The first phase is a pre-application phase in response to PAR-10-095. Pre-applications will be evaluated by a group of external reviewers. Those investigators whose submissions are judged to be the most outstanding will be notified of the opportunity to submit full applications under this FOA (DP1).

Optimization of Small Molecule Probes for the Nervous System (STTR [R41]) and (SBIR [R43])

PAR-09-259 and PAR-09-260

National Institute of Neurological Disorders and Stroke (NINDS)

National Eye Institute (NEI)

National Institute on Aging (NIA)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) encourages Small Business Technology Transfer (STTR) grant applications from small business concerns (SBCs) that propose to develop new small molecule probes for investigating biological function in the nervous system via the application of advanced medicinal chemistry and the biological testing of compounds. Eligible SBCs will have identified probe candidates via screening of small molecule collections, using in vitro assays of biological activity developed to interrogate these collections, and be able to show that the structural features of these small molecules are related to their biological activity. Applications should nominate small molecule probe candidates from distinct structural series for the further, iterative design and testing of analogues in structure-activity relationship studies, using in vitro assays of biological function adapted to the medium throughput screening requirements of this work. These studies should have the goal of developing a small molecule probe possessing the attributes (eg: affinity, selectivity, activity) required for its use in future pharmacological studies proposed by the SBC. Applicants are strongly encouraged to utilize publicly available cheminformatic capabilities for the acquisition of compounds, and semi-custom synthesis of analogues, which is required of these studies.

Amount: \$300,000

Collaborative Research on the Transition From Acute to Chronic Pain: New Models and Measures in Clinical and Preclinical Pain Research (R01)

RFA-DE-11-001

National Institute of Dental and Craniofacial Research (NIDCR)

The overall goal of this FOA is to stimulate preclinical and clinical research that will accelerate our understanding of the biological and behavioral determinants driving the transition from acute pain to chronic pain disorders. An understanding of the mechanisms and risk factors that determine who will transition to a chronic pain state is necessary in order to intervene in this transition and to design new, effective treatments to resolve acute pain before it becomes chronic. The objectives of this FOA are to: 1) assemble research teams with expertise in basic and clinical pain research and related expertise outside the pain field that will provide novel, collaborative, multidisciplinary approaches to answer crucial questions about the transition from acute to chronic pain; 2) discover biological and behavioral mechanisms that drive the transition from an acute pain state to a chronic dysfunctional pain condition; 3) develop new clinical and preclinical models and measures of pain that will be essential to identify and characterize these mechanisms. Studies that involve considerable risk but with the potential for breakthroughs in the field are strongly encouraged.

NIAID Advanced Technology SBIR (NIAID-AT-SBIR [R43/R44]) and STTR (NIAID-AT-STTR [R41/R42])

PA-10-123 and PA-10-124

National Institute of Allergy and Infectious Diseases (NIAID)

This funding opportunity announcement (FOA) encourages Small Business Innovation Research (SBIR) grant applications from small business concerns (SBCs) for advanced technology projects that require a longer award period and greater award amount than those routinely allowed under the SBIR program. For this FOA, "advanced technology" is defined as a "clearly identified" product or service that requires approval of the Food and Drug Administration (FDA) and is within the mission of NIAID. An example of a "clearly identified product" is a research project focused on a lead compound for an AIDS drug. A research project focused on developing an assay to identify lead compounds does not have a clearly identified product and would not be appropriate for this FOA. Only applications meeting the above "advanced technology" definition should be submitted in response to this FOA. Applications in response to this FOA should not contain human clinical trials. NIAID Policy currently only allows investigator initiated clinical trials to be submitted using the R34 mechanism.

Pharmacokinetic Research in Pediatric HIV/TB Co-Infection (R01) and (R21)

RFA-HD-09-015 and RFA-HD-09-016

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute of Mental Health (NIMH)

This Funding Opportunity Announcement (FOA), issued by the National Institute of Child Health and Human Development (NICHD) and the National Institute of Mental Health (NIMH), encourages Research Project Grant (R01) applications from institutions/organizations that propose to evaluate the pharmacokinetics of anti-tuberculosis (anti-TB) drugs and pharmacokinetic drug interactions between anti-TB drugs and anti-HIV medications, and to potentially provide preliminary data regarding the effect of such pharmacokinetic parameters on the outcome of treatment in children with HIV/TB co-infection. Pediatric research in these areas lags far behind that in adults due to the many challenges surrounding the diagnosis and management of TB disease in children. Research related to the treatment of TB in the context of pediatric HIV/TB co-infection is urgently needed. This FOA will support grants to define appropriate dosing of anti-TB agents in HIV-infected children and that will generate knowledge regarding the optimization of management of TB/HIV co-infection in children, including the management of central nervous system (CNS) involvement with TB through the evaluation of CNS penetration of anti-TB agents in the context of antiretroviral therapy.

Prizes & Awards

SBS Awards

Society for Biomolecular Screening (SBS)

The Society for Biomolecular Sciences supports an award of \$5,000 made at least every three years, to recognize outstanding achievements in research, innovation, ground breaking foundation, or seminal contributions that have proven to be broadly applicable to biomolecular screening or pharmaceutical/ agricultural lead discovery. Furthermore, the award seeks to recognize those who have distinguished themselves within the scope of the society's mission. Independence of thought, originality of approach, clarity of vision, and a consistent record of achievement are important criteria. Quality and depth rather than the number of contributions shall be emphasized.

The Society for Biomolecular Sciences supports annual awards of \$1,000 to recognize a member for a significant technical accomplishment, exceeding a benchmark or milestone in screening or the lead discovery process, or an innovative and integrated use of mature technologies. More than one award may be conferred annually.

ARL/ARO Broad Agency Announcement-Revised

W911NF-07-R-0001-02

U.S. Army Research Laboratory (ARL)

14.0. Extramural research in the Life Sciences is supported by the Army Research Office. For those proposals related to purely medical topics, the investigator is invited to contact the U.S. Army Medical Research and Materiel Command. For research in the behavioral and social sciences or in training techniques, contact the Army Research Institute for Behavioral and Social Sciences. The ARO Life Sciences Division research program is currently focused on four sub

area work packages. The titles, scopes and points of contact for these work packages, each of which address general aspects of basic research in biotechnology, as well as the specific thrusts described, are listed below. A small number of symposia, conferences and workshops are also supported in part or in whole to provide an exchange of ideas related to ongoing programs in Army laboratories. Potential offerors are strongly encouraged to contact the appropriate TPOC for preliminary discussions on their ideas before any submissions. The TPOC may invite the offeror to submit a preproposal.

14.1. Bioengineering. Fundamental studies to define structure-function relationships and biochemical interactions for enzymes, receptors and other macromolecules exhibiting mechanisms and properties uniquely relevant to synthetic and degradative pathways of interest to the military, including establishment of the foundations for manipulation and exploitation of biocatalysis, ribosomal and non-ribosomal biosynthesis to enhance permissiveness toward elaboration of useful biomolecular structures and cellular systems designed with "metabolic engineering" in mind. Also, research to provide insight from nature on novel theoretical principles and mechanisms in sensory and motor function, as well as on materials with extraordinary properties, from biological sources. Includes not only initial molecular events, signal transduction pathways and integrated information processing for the powerful sensing capabilities exhibited in the biological world, but also self-assembly processes, hierarchical structure formation, and functional characterization of biomolecular materials such as those with potential "biomimetic" utility for nanometer scale fabrication or for energy and information transfer, among other possibilities. Technical Point of Contact: Dr. Robert Kokoska, Robert.kokoska@us.army.mil, (919) 549-4342.

14.2 Molecular Genetics and Genomics. This program emphasizes basic research in molecular genetics and genomics that will enable optimization of soldier cognitive and physical performance, soldier protection, and Army logistics. This includes human performance and protection under both normal conditions, and when affected by a variety of stressors that are likely to be encountered in battlefield situations, such as dehydration, heat, cold, sleep deprivation, fatigue, caloric insufficiency, microbial factors, and psychological stress. Genetic and genomic research areas include identification and characterization of gene function, gene regulation, genetic interactions, gene pathways, gene expression patterns, mitochondrial regulation and biogenesis, and nuclear and mitochondrial DNA replication, mutagenesis, oxidative stress, and DNA repair. Also molecular responses to pathogens, pathogen identification, and pathogen inactivation, as well as host-pathogen interactions, and host components of infection and resistance to infection. This program is also interested in the biotechnology of microarrays, including both genomic- and proteomic-based platforms, for real time detection of pathogens or physiological states that would reduce or interfere with human performance. This program also supports development of new biomaterials and bioproduction methods, and other advances in biotechnology methods and applications. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.3. Microbiology and Biodegradation. Biochemical and physiological mechanisms, underlying the biodegradative processes in normal, extreme, and engineered environments and fundamental studies on organisms in these environments, the properties of materials that make them susceptible or resistant to biological attack, basic concepts for anti-fungals, and studies of microbiological mechanisms with potential for contributing to the remediation of sites contaminated with toxic wastes. Included are research investigations in analytical microbiology (including microbial signatures), and in general microbial mechanisms with relevance to Army problems. Addressed here also is research into microbial communities and how to study organisms that cannot be grown in the lab, as well as research into methods to enhance the stabilization of military materiel, which would include methods to prevent microbial growth.

Also included is the development of microbial systems for unique biotechnological applications and bioengineering processes with individual microbial species or consortia of microorganisms, emphasizing the control, stability, and mechanisms of the basic cellular processes involved. Technical Point of Contact: Dr. Micheline Strand, e-mail: Micheline.strand@us.army.mil, (919) 549-4343.

14.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuro-psychological and/or cortical/cognitive

mechanisms underlying successful completion of complex task behaviors applicable to nonlaboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or psychophysiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states

through modeling of individual cognitive dynamics and decision making is appropriate to this research area. Technical Point of Contact: Dr. Elmar T. Schmeisser e-mail elmar.schmeisser@us.army.mil, (919) 549-4318.

American Foundation for Suicide Prevention Invites Applications for Research Grants

The American Foundation for Suicide Prevention

AFSP research grants support studies that aim to increase understanding of the causes of suicide and factors related to suicide risk, or to test treatments and other interventions designed to prevent suicide. Investigators from all academic disciplines are eligible to apply, and both basic science and applied research projects will be considered, providing the study has an essential focus on suicide or suicide prevention. AFSP grants are awarded for one or two-year periods.

Methodology, Measurement, and Statistics (MMS)

NSF 08-561

NSF

The MMS Program seeks proposals that are methodologically innovative, grounded in theory, and have potential utility for multiple fields within the social, behavioral, and economic sciences. Successful proposals often integrate across the following areas: The development, application, and extension of formal models and methodology for social and behavioral research, including methods for improving measurement. The proposed research must have implications for one or more of the social and behavioral sciences. The development of formal models that cross traditional disciplinary boundaries, including research on statistical methodology or statistical modeling having direct implications for one or more of the social and behavioral sciences. Research on methodological aspects of new or existing procedures for data collection, including methodology for survey research, and research to evaluate or compare existing data bases and data collection procedures. The collection of unique databases with cross disciplinary implications, especially when paired with developments in measurement or methodology. The organizational infrastructure of social and behavioral research.

Collaborative R01s for Clinical and Services Studies of Mental Disorders, AIDS and Alcohol Use Disorders (R01)

PAR-09-153

NIH – Multiple Institutes

The National Institute of Mental Health (NIMH) and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) seek to support collaborative intervention trials in the treatment, prevention or rehabilitation of those with mental disorders and alcohol use disorders and comorbid mental disorders. Support is also provided for other collaborative clinical studies, including but not limited to mental

health services research, AIDS, genetics, psychopathology, stigma, and cultural and social processes. This Funding Opportunity Announcement (FOA) should be used when two or more sites are needed to complete the study. Accordingly, the collaborating studies share a specific protocol across the sites and are organized as such in order to increase sample size, accelerate recruitment, or increase sample diversity and representation. In studies with a large number of sites, it is expected that one site will be submitted as a coordinating site for data management and/or other centralized administration. For a linked set of collaborative R01s, each site has its own Project Director/Principal Investigator and the program provides a mechanism for cross-site coordination, quality control, database management, statistical analysis, and reporting.

Behavioral Systems

PD 07-7472

National Science Foundation (NSF)

Directorate for Biological Sciences (BIO)

Division of Integrative Organismal Systems (IOS)

The Behavioral Systems Cluster supports research on the development, function, mechanisms, and evolutionary history of behavior, with emphasis on a vertically integrated understanding of the behavioral phenotype in nature. To foster this integrative goal, the Cluster specifically encourages projects that seek to understand how combinations of neural, hormonal, physiological, and developmental mechanisms act synergistically as a system from which behavior emerges. Laboratory work or the study of animals in captivity is encouraged, to the extent that it contributes to the understanding of behavior in natural systems.

Silvio O. Conte Centers for Basic and Translational Mental Health Research (P50)

PAR-08-194

National Institutes of Health (NIH)

National Institute of Mental Health (NIMH)

The National Institute of Mental Health (NIMH) invites applications for Conte Centers for Basic and Translational Mental Health Research. The purpose of these Centers is to support interdisciplinary teams of researchers engaging in integrative, novel, and creative experimental approaches to address high-risk, high-impact questions that will significantly advance the state of the science in brain and behavioral research relevant to mental health. Conte Centers comprise a collaborative, cutting-edge, interdisciplinary research program conducted at multiple levels of analysis spanning from genes to behavior to disease in humans, animals, and model systems, from infancy to adulthood as appropriate, based on a well-defined and unified scientific question (hypothesis) or problem. Areas of interest span the full range of basic neuroscience, basic behavioral science, genetics research, and proof-of-concept clinical trials, as well as the translational integration of neuroscience and behavioral science with study of the etiology, pathogenesis, and/or the developmental progression of mental disorders across the lifespan. Proposed Centers should be directed towards a well-defined and unified scientific question or problem and in some instances may include discovery-based as well as technology development components.

Science of Behavior Change: Finding Mechanisms of Change in the Laboratory and the Field (R01)

RFA-RM-10-002

National Institutes of Health (NIH)

Multiple Institutes

This FOA solicits Research Project Grant (R01) applications that will improve understanding of the basic mechanisms of behavior change by bridging work in the laboratory and the field. This understanding will advance several goals, including: the identification of the optimal targets and timepoints in the lifecourse for intervention; the identification of common mechanisms of change related to either multiple or bundled health behaviors; the ability to tailor interventions to particular at-risk individuals or groups; the application of novel technologies for behavioral assessment and change; and the identification of individuals or groups most likely to benefit from specific interventions. This initiative seeks to establish the groundwork for a unified science of behavior change, capitalizing on emerging basic

science to accelerate investigation of common mechanisms that play a role in initiating or maintaining behavior change and are applicable across a broad range of health-related behaviors. Approaches from behavioral economics; the social, behavioral, cognitive and affective neurosciences; neuroeconomics; behavior genetics and genomics; and systems science are specifically encouraged. By focusing basic research on the mechanisms of behavior change, and by integrating work across laboratory and field contexts, this initiative should transform the efficacy, effectiveness, and cost efficiency of behavior change interventions.

Amount: \$2,000,000

Building System Capacity for Implementing Evidence-Based Practices in Substance Abuse Treatment and Prevention (R34)

PA-09-105

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Drug Abuse, National Institutes of Health, provides resources to facilitate research on the adoption, implementation, and sustainability of evidence-based clinical treatment practices, prevention approaches, and business practices in community-based service delivery settings. It is intended to foster collaboration between service providers and entities that directly influence their capacity to deliver such practices, including Single State Agencies, other funders, licensing and regulatory bodies, referral sources, educational entities, and other social services agencies that interact with the treatment and prevention systems. Applications are encouraged that will advance the field of implementation science while simultaneously building the capacity of systems and service providers to conduct process improvement research. Applicants may propose to pilot test proven clinical or business practices across service delivery settings, or to study the downstream effect of changes in State or other system-level policies on program capacity to implement evidence-based practices. This FOA encourages collection of preliminary data needed to inform approaches to the eventual scaling-up of selected practices to broader, sustained implementation.

Deep Sequencing and Haplotype Profiling of Mental Disorders (Collaborative R01)

PAR-08-199

National Institute of Mental Health (NIMH)

With the initial stages of the Human Genome Project completed and new insights gained into the complex interplay of genomic function, genomic structure and the environment in mental disorders, attention is shifting towards the translational promise of the completed human sequence and a new era of genomic medicine in mental disorders. A special emphasis of this Funding Opportunity Announcement (FOA) issued by the National Institute of Mental Health (NIMH), National Institutes of Health (NIH), is to support applications that implement large-scale studies and innovative analytical designs that will disaggregate a given mental disorder into components of finite risks. These developments may be evolutionary or may be fundamentally new and may lead to paradigm shifts in the field. Applications submitted in response to this FOA may propose new technologies for cost effective whole genome analysis and in-depth sequencing and analysis of candidate genes and genomic regions in pedigrees or in a sample of unrelated cases with mental disorders. Applications for large-scale haplotype analysis and the development of new analytical methods also are encouraged.

Amount: varies

LOI: N/R

Basic and Applied Scientific Research

W911NF-07-R-0003-02

ARMY RESEARCH OFFICE

8.4 Neurophysiology and Cognitive Neuroscience. Research in the perception and cognition subfields of neurophysiology and the cognitive neurosciences, covering several or all areas of electrophysiology, psychophysiology, sensory and perceptual physiology, computational neurobiology, psychophysics, neuropsychology, and integrative neurobiology is of interest. Specific examples can include physiological, neuropsychological and/or cortical/cognitive mechanisms underlying successful completion of complex task behaviors applicable to non-laboratory environments under non-ideal conditions, to include both amelioration of induced losses as well as enhancement in defined perceptual, cognitive and/or motor abilities. Investigations can span the gamut from multi-unit recordings through evoked potentials and neuro-imaging technologies to humoral and psychological correlates of both central and peripheral nervous system function. Non-medically oriented research designed to elucidate the fundamental physiology underlying cognition and possible non-invasive methods of monitoring cognitive states and processes during normal activity is appropriate. Perceptual and/or psycho physiological implications of mind-machine interfaces ranging from optimizing auditory, visual and/or somatosensory display and control systems based on physiological or psychological states through modeling of individual cognitive dynamics and decision making is appropriate to this research area.

RFA-OD-10-013

All NIH Institutes and Centers participate in this NIH-wide announcement.

This NIH Funding Opportunity Announcement (FOA), supported by funds provided to the NIH under the American Recovery and Reinvestment Act of 2009 (Recovery Act or ARRA), Public Law 111-5, invites applications for the NIH Directors ARRA Pathfinder Award to Promote Diversity in the Scientific Workforce. The NIH recognizes a unique and compelling need to promote diversity in the biomedical, behavioral, clinical and social sciences research workforce. The NIH expects all of its efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups; to improve the quality of the educational and training environment; to balance and broaden the perspective in setting research priorities; to improve the ability to recruit subjects from diverse backgrounds into clinical research protocols; and to improve the Nation's capacity to address and eliminate health disparities. This new FOA introduces a new research grant program to encourage exceptionally creative individual scientists to develop highly innovative and possibly transforming approaches for promoting diversity within the biomedical research workforce. To be considered highly innovative, the proposed research must reflect ideas substantially different from those already being pursued or it must apply existing research designs in new and innovative ways to unambiguously identify factors that will improve the retention of students, postdocs and faculty from diverse backgrounds. Awardees must commit a major portion (generally 30% or more) of their research effort to activities

supported by the Directors Pathfinder Award and the proposed research must be endorsed by the highest levels of institutional management.

Amount: \$2,000,000

LOI: April 5, 2010

Deadline: May 4, 2010

2010-11 Scholars Program in Youth Settings Research

New

William T. Grant Foundation

An initiative of the William T. Grant Foundation, the William T. Grant Scholars Program is accepting applications from promising early-career researchers who want to tackle questions important to theory and either policy or practice for improving youth settings.

The program is designed to support promising early-career researchers from diverse disciplines who have demonstrated success in conducting high-quality research and are seeking to further develop and broaden their expertise. The foundation is interested in applicants trained across a range of social, behavioral, and health sciences. Applicants must submit a project that is consistent with the foundation's current research interests: addressing issues that have compelling relevance for theory and policies or practices affecting the settings of youth between the ages of 8 and 25 in the United States or a vulnerable sub-population of those youth.

Amount: \$350,000

LOI: N/R

Deadline: July 7, 2010

Behavioral and Social Science Research on Understanding and Reducing Health Disparities (R01) and (R21)

New

PAR-10-136 and PAR-10-137

National Institutes of Health (NIH)

Office of Behavioral and Social Sciences Research (OBSSR)

multiple other institutes

To encourage behavioral and social science research on the causes and solutions to health and disabilities disparities in the U. S. population. Health disparities between, on the one hand, racial/ethnic populations, lower socioeconomic classes, and rural residents and, on the other hand, the overall U.S. population are major public health concerns. Emphasis is placed on research in and among three broad areas of action: 1) public policy, 2) health care, and 3) disease/disability prevention. Particular attention is given to reducing "health gaps" among groups. Proposals that utilize an interdisciplinary approach, investigate multiple levels of analysis, incorporate a life-course perspective, and/or employ innovative methods such as system science or community-based participatory research are particularly encouraged.

Amount: varies

LOI: August 14, 2010, December 11, 2010, April 11, 2011, August 14, 2011, December 11, 2011, April 11, 2012, August 14, 2012,

Secondary Analyses of Social and Behavioral Datasets in Aging (R03)

New

PA-10-139

National Institute on Aging (NIA)

This Funding Opportunity Announcement (FOA), issued by the National Institute on Aging (NIA), is seeking small grant (R03) applications to conduct secondary analysis of social and behavioral data in aging. Specifically, NIA seeks applicants to: 1) stimulate and facilitate secondary analysis of data related to dynamics of health and disability, cognition, psychosocial and sociodemographic factors, genetics, and biomarkers, long term care, caregiving, behavioral medicine, retirement, economic status; 2) provide support for preliminary projects using secondary analysis that could lead to subsequent applications for other research grant award mechanisms;

3) provide support for analyses of new databases and experimental modules for purposes such as informing the design and content of future study waves; and 4) provide support for pilot research on under-utilized databases.

Amount: \$100,000

Key Words: **Ageing, Secondary Analysis, Existing Databases**

Aetna 2010 Grant Program

New

Aetna Foundation

For 2010, the foundation will focus its grant making on issues that improve health and the healthcare system in three areas: obesity (addressing the rising rate of obesity among U.S. adults and children); racial and ethnic healthcare equity (promoting equity in health and health care for common chronic conditions and infant mortality); and integrated health care (advancing high-quality health care by improving care coordination and communications among healthcare professionals, creating informed and involved patients, and promoting cost-effective, affordable care). Grant applications that address more than one of these areas will receive priority consideration.

Within the three program areas, the foundation will award the following types of grants: research grants to generate new knowledge, making use of either quantitative or qualitative techniques; project grants to test, apply, or disseminate new practices designed to improve health and health care; and policy grants to analyze and promote policies to ensure that programs and practices to improve health and health care can be replicated and disseminated broadly. In addition, the foundation will consider applications for sponsorship of fundraising events such as galas and walks, outreach activities (e.g., health fairs), and other community-based health and wellness initiatives aligned with the foundation's funding priorities.

Amount: up to \$250,000

LOI: Required for grant requests over \$50,000

Deadline: Quarterly

Association of Public Health Laboratories (APHL)

CDC-RFA-HM10-1001

U.S DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention (CDC)

Association of Public Health Laboratories (APHL)

The purpose of the program is to enhance the work of public health laboratories in the U.S. and abroad. The program aims to promote quality public health laboratory practice, improve public health laboratory infrastructure, strengthen the public health laboratory system, and to develop a well-trained public health laboratory workforce in the U.S. and globally. It also aims to ensure laboratory preparedness for emerging infectious diseases or other biologic and chemical public health threats, promote technology transfer to ensure up-to-date technologies for the testing laboratory, and enhance communication linkages between state and local public health laboratories and the clinical laboratory testing community.

Public Health Law Research: Making the Case for Laws That Improve Health

The Robert Wood Johnson Foundation (RWJF)

The Robert Wood Johnson Foundation (RWJF) seeks to build the evidence for and strengthen the use of regulatory, legal and policy solutions to improve public health. RWJF is equally interested in identifying and ameliorating laws and legal practices that unintentionally harm health. As public health practitioners, policy-makers and others consider how laws influence the public's health, they need evidence to inform questions such as: How does law influence health and health behavior? Which laws have the greatest impact? Can current laws be made more effective through better enforcement, or do they require amendment? The purpose of RWJF's Public Health Law Research program is to answer such questions by building a field of research and practice in public health law.

Amount: \$150,000-\$450,000

LOI: [March 17, 2010 web conference for applicants; registration required](#)

Deadline: April 14, 2010

GPHRC Translational Research RFA

The Center for Clinical and Translational Research and Great Plains Health Research Consortium

UNMC's Center for Clinical and Translational Research (CTTR) has brought together regional institutions into a health research consortium, the "Great Plains Health Research Consortium" (GPHRC). The GPHRC has submitted a NIH Clinical and Translational Science Award (CTSA) proposal which hopes to speed research translation from "bench to bedside" and clinical trials into community-wide applications. UNMC is sponsoring the first GPHRC Seed Grant program, with the primary intent being to bring together new research teams representing 2 or more GPHRC institutions to generate the pilot data needed to support a new extramural grant proposal within the next 1-3 years. Applications that address the health priority areas of the GPHRC as identified below will be given priority in review for this RFA:

- Health disparities including rural health disparities
- Cancer
- Obesity-Diabetes-Vascular Disease (inclusive of cardiovascular and all other types of vascular disease)
- Infectious Diseases
- Musculoskeletal Disease
- Neurologic and Psychobehavioral Disease
- Alcohol and Smoking Related Disease
- Transplantation

Amount: \$100,000

LOI: N/R

Deadline: May 1, 2010

American Foundation for Suicide Prevention Invites Applications for Research Grants

The American Foundation for Suicide Prevention

AFSP research grants support studies that aim to increase understanding of the causes of suicide and factors related to suicide risk, or to test treatments and other interventions designed to prevent suicide. Investigators from all academic disciplines are eligible to apply, and both basic science and applied research projects will be considered, providing the study has an essential focus on suicide or suicide prevention. AFSP grants are awarded for one or two-year periods.

Amount: varies

LOI: N/R

Deadline: submission deadlines of Dec. 15 and June 15; annually

Active Living Research and RWJF New Connections

Robert Wood Johnson Foundation (RWJF)

Active Living Research is a national program of the Robert Wood Johnson Foundation (RWJF). The program supports research to inform policy and environmental strategies for increasing physical activity among children and adolescents, decreasing their sedentary behaviors and preventing obesity. We place special emphasis on strategies with the potential to reach children and youths ages

3 to 18 who are at highest risk for obesity: African-American, Latino, American Indian, Alaska Native, Asian-American and Pacific Islander children, as well as children who live in under-resourced and lower-income communities. Grants funded under this call for proposals (CFP) are expected to advance RWJF's efforts to reverse the childhood obesity epidemic by 2015. This CFP consists of grant opportunities for specified research topics and dissertation awards. It also includes funding opportunities for New Connections grants made available through the Active Living Research program. New Connections grants through Active Living Research are for new investigators who have been historically disadvantaged or underrepresented in research activities. This includes ethnic or racial researchers who are historically underrepresented, first-generation college graduates, and individuals from lower-income communities.

Mentored Research Scientist Research Career Development Award (K01)

PAR-09-087

Office of Extramural Research, Education and Priority Populations (OEREP)

The primary purpose of the AHRQ Mentored Research Scientist Research Career Development Awards (K01) program is to prepare qualified individuals for careers that have a significant impact on the quality, safety, efficiency, and effectiveness of health care for all Americans. This program represents the continuation of an AHRQ program that provides support and "protected time" to individuals with a research doctoral degree for an intensive, supervised research career development experience in health services research. The K01 award can be used both by individuals who propose to newly embark in health services research training and those who had a hiatus in their research careers because of illness or family circumstances. The K01 award is also available to promote research workforce diversity by providing enhanced research career development opportunities.

Methodology, Measurement, and Statistics (MMS)

NSF 08-561

NSF

The MMS Program seeks proposals that are methodologically innovative, grounded in theory, and have potential utility for multiple fields within the social, behavioral, and economic sciences. Successful proposals often integrate across the following areas: The development, application, and extension of formal models and methodology for social and behavioral research, including methods for improving measurement. The proposed research must have implications for one or more of the social and behavioral sciences. The development of formal models that cross traditional disciplinary boundaries, including research on statistical methodology or statistical modeling having direct implications for one or more of the social and behavioral sciences. Research on methodological aspects of new or existing procedures for data collection, including methodology for survey research, and research to evaluate or compare existing data bases and data collection procedures. The collection of unique databases with cross disciplinary implications, especially when paired with developments in measurement or methodology. The organizational infrastructure of social and behavioral research.

Decision Making in Cancer: Single-Event Decisions (R01) [PA-08-063] and (R21) [PA-08-064]

PA-08-063 and PA-08-064

NIH

The purpose of this Funding Opportunity Announcement (FOA) is to invite applications for research projects that will enhance understanding of human decision-making processes so that individuals can make more informed and satisfying choices regarding their health. The NCI encourages collaborations between researchers studying the processes of basic judgment and decision-making and researchers conducting cancer control investigations that will elucidate single-event decision-making processes, at the level of either the individual patient or health care provider. These decision-making processes are pertinent to cancer prevention, detection, treatment, survivorship, or end-of-life care. For the purpose of this initiative, a single-event decision is defined as a discrete decision made at a specific point in time.

Research on the Economics of Diet, Activity and Energy Balance (R21) [PA-08-077] and (R01) [PA-08-078]

PA-08-077 and PA-08-078

NIH

This Funding Opportunity Announcement (FOA) is intended to make funding opportunities in the area of energy balance (i.e., the relationship between diet, physical activity, and body composition) known to researchers with expertise and experience in health economics, health services, and econometric modeling including multi-level analyses who otherwise might not be aware of the opportunity to apply their disciplines to this area of research. Obesity has become a major focus of public health efforts at the national, State, and local levels. The major focus of this FOA is to solicit projects that enhance the state-of-the-science on the causes of obesity and to inform Federal decision making on effective public health interventions for reducing the rate of obesity in the United States. Especially, this FOA aims to promote collaborative activities between researchers trained in economics and researchers specializing in public health, cancer, cardiovascular diseases and other chronic diseases

Genetic Susceptibility and Variability of Human Structural Birth Defects (R01)

PA-08-011

NICHD, NIDCR, NIEHS

This Funding Opportunity Announcement (FOA) encourages innovative investigator-initiated applications designed to study fundamental developmental processes using animal models in conjunction with translational/clinical approaches with the goal of advancing our understanding of the etiology of structural birth defects. In 2000, the Developmental Biology, Genetics and Teratology Branch at NICHD began its Birth Defects Initiative with the funding of a number of research grants and program projects focused on the use of molecular genetic approaches for the study of genetic susceptibility, epidemiology, and developmental biology of human congenital structural malformations. These grants established the basis for a working group of investigators, who meet annually to present research updates, share ideas and technical advances, establish new collaborations, and provide input and advice to NICHD staff. Applicants funded through this FOA will join the NICHD's Birth Defects Special Interest Group and participate in annual meetings designed to provide a forum to discuss research progress, exchange ideas, share resources, and foster collaborations relevant to the goals of the NICHD's Birth Defects Initiative.

Science of Behavior Change: Finding Mechanisms of Change in the Laboratory and the Field (R01)

RFA-RM-10-002

National Institutes of Health (NIH)

Multiple Institutes

This FOA solicits Research Project Grant (R01) applications that will improve understanding of the basic mechanisms of behavior change by bridging work in the laboratory and the field. This understanding will advance several goals, including: the identification of the optimal targets and timepoints in the lifecourse for intervention; the identification of common mechanisms of change related to either multiple or bundled health behaviors; the ability to tailor interventions to particular at-risk individuals or groups; the application of novel technologies for behavioral assessment and change; and the identification of individuals or groups most likely to benefit from specific interventions. This initiative seeks to establish the groundwork for a unified science of behavior change, capitalizing on emerging basic science to accelerate investigation of common mechanisms that play a role in initiating or maintaining behavior change and are applicable across a broad range of health-related behaviors. Approaches from behavioral economics; the social, behavioral, cognitive and affective neurosciences; neuroeconomics; behavior genetics and genomics; and systems science are specifically encouraged. By focusing basic research on the mechanisms of behavior change, and by integrating work across laboratory and field contexts, this initiative should transform the efficacy, effectiveness, and cost efficiency of behavior change interventions.

Amount: \$2,000,000

NIH Small Research Grant Program (Parent R03)

PA-10-064

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) Investigator-Initiated Small Grant (R03) funding opportunity supports small research projects that can be carried out in a short period of time with limited resources. Investigator-initiated research, also known as unsolicited research, is research funded as a result of an investigator submitting a research grant application to NIH in an investigator's area of interest and competency. All investigator-initiated small grant applications described in this announcement will be assigned to NIH Institutes and Centers (ICs) according to standard Public Health Service (PHS) referral guidelines and specific program interests. Investigators are strongly encouraged to consult the list of participating ICs and special research interests. The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects;

development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

Independent Scientist in Global Health Award (ISGHA) (K02)

PAR-10-065

National Institutes of Health (NIH)

Fogarty International Center (FIC)

The purpose of the Independent Scientist Award in Global Health (K02) is to foster the development of outstanding scientists and enable them to expand their potential to make significant contributions to their field of research in global health. The K02 award provides three, four, or five years of research and salary support, and "protected time" for newly independent scientists who can demonstrate the need for a period of intensive research focus as a means of enhancing their research careers. Each independent scientist career award program must be tailored to meet the individual needs of the candidate.

Understanding and Promoting Health Literacy (R01) and (R03) and (R21)

PAR-10-133 and PAR-10-134 and PAR-10-135

National Institutes of Health (NIH)

Agency for Healthcare Research and Quality (AHRQ)

multiple institutes

The ultimate goal of this program announcement is to encourage empirical research on health literacy concepts, theory and interventions as these relate to the U.S. Department of Health and Human Services' public health priorities that are outlined in its Healthy People initiative. Health literacy is defined as the degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions.

Mechanism of Support. This FOA will utilize the R01 grant mechanism and runs in parallel with FOAs of identical scientific scope, PAR-10-134 that encourages applications under the R03 grant mechanism, and PAR-10-135, that encourages applications under the R21 grant mechanism.

Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Research Training Grants (T32) - PA-06-468/PA-08-226

PA-06-468/PA-08-226

National Institutes of Health (NIH)

The objective of the National Research Service Award (NRSA) program is to provide predoctoral and postdoctoral research training opportunities for individuals interested in pursuing research careers in biomedical, behavioral and clinical research. Each NIH Institute and Center has a unique scientific purview and different program goals and initiatives that evolve over time. It is therefore critical that all applicants consult with the scientific/research contact at the relevant NIH Institute or Center for current information about program priorities and policies before preparing an application. This action is of utmost importance because applications with marginal or no relevance to the NIH awarding components participating in this funding opportunity announcement will not be accepted for review or considered for funding.

Integrating Biobehavioral and Sociocultural Research to Prevent HIV Transmission and Infection

[(R01) PA-08-188] and [(R21) PA-08-189]

PA-08-188 and PA-08-189

National Institutes of Health (NIH)

This funding opportunity announcement (FOA) solicits Research Project (R01) grant applications from applicant organizations to develop theoretically grounded approaches to prevention of HIV infection and transmission that incorporate biobehavioral approaches in studies that are culturally appropriate. Biobehavioral approaches may be biomedical, or they may consist of behavioral interventions using biological markers of efficacy. Intervention and pre-intervention studies are welcomed, but descriptive ethnographic and epidemiological research is still needed in some areas. For example, descriptive research may delineate the impact of cultural variables on behaviors that impede or promote biological markers (e.g., seroconversion), lead to a better understanding of ethical concerns in biomedical preventive studies, or may illuminate as yet unrecognized issues concerned with adherence to a prevention interventions. Intervention studies should evaluate the efficacy of biomedical interventions, or of behavioral interventions that also use biological variables, in light of the sociocultural context.

Genetic Epidemiology of Substance Use Disorders (R03)

PA-07-414

National Institutes of Health (NIH)

The National Institute on Drug Abuse (NIDA) and the National Institute on Alcohol Abuse and Alcoholism (NIAAA) seek to stimulate and expand research applying genetic epidemiologic methods to studies of substance and alcohol use disorders (SUDs/AUD, drug or alcohol abuse and dependence). Previous studies using twin, adoption, and family approaches indicate that genetic factors substantially contribute to the vulnerability to SUDs/AUD. Shared environmental factors have also been shown strongly to influence risk, particularly for the onset of substance and alcohol use, while heritability estimates generally rise with age and with progression from substance use to disorder. Significant advances have been made in our understanding of the developmental nature of the onset and progression of SUDs/AUD and in defining a disinhibited phenotype. Building on these findings, new studies are needed to apply genetic epidemiologic approaches to advance our understanding of a variety of developmental trajectories of SUD/AUD; integrate as well as differentiate genetic, environmental, and developmental factors in the onset and maintenance of SUD/AUD; broaden and refine phenotypic definitions of SUDs/AUD; guide the translation of etiologic findings to treatment, prevention, gene-finding and molecular studies; and meet the methodologic challenges of the field.

Mechanism for Time-Sensitive Drug Abuse Research (R01)

PAR-10-072

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) is issued by the National Institute on Drug Abuse (NIDA), National Institutes of Health (NIH). The FOA is intended to support substance abuse prevention and treatment services research in rapidly evolving areas (e.g., changes in service systems, health care financing, policy, natural/man-made disasters, etc) where opportunities for empirical study are, by their very nature, only available through expedited review and award of support. There are three distinguishing features of an eligible study: 1) the study's scientific value and feasibility are clear, 2) rapid review and funding are required in order for the scientific question to be answered, and 3) the knowledge gained from the study is time-sensitive and seeking funding through the regular NIH cycle of review and award would result in a missed opportunity to conduct the research. It should be clear that the research question offers an uncommon and scientifically significant research opportunity that could only become available if the project is initiated with minimum delay.

Pilot and Feasibility Studies in Preparation for Drug Abuse Prevention Trials (R34)

PA-09-146

National Institute on Drug Abuse (NIDA)

This FOA for R34 applications seeks to support: (a) pilot and/or feasibility testing of new, revised, or adapted preventive intervention approaches targeting the initiation of drug use, the progression to abuse or dependence, and the acquisition or transmission of HIV infection among diverse populations and settings; and (b) pre-trial feasibility testing for prevention services and systems research. The NIDA R34 mechanism does not support the development of intervention protocols, manuals, or the standardization of protocols. It is expected that research conducted via this R34 mechanism will consist of early stage efficacy, effectiveness or services research that will provide intervention pilot and/or feasibility data that is a pre-requisite for submitting larger drug abuse and/or drug-related HIV prevention intervention studies.

Drug Abuse Epidemiology and Services Research in Cooperation with the Clinical and Translational Science Awards Consortium (R01)

PAS-09-001

National Institute on Drug Abuse (NIDA)

Through this program announcement with set aside (PAS), the National Institute on Drug Abuse (NIDA) invites applicants to develop innovative drug abuse epidemiology or health services research in cooperation with academic centers supported through the NIH Clinical and Translational Science Awards (CTSA) consortium. A major NIH initiative, the CTSA consortium is transforming how clinical and translational research is conducted, building an infrastructure for multidisciplinary researchers and clinicians to perform research and develop new treatments more efficiently. As a part of this infrastructure, CTSA sites have established partnerships with a range of clinical settings and have access to large, multi-generational population cohorts. These features of the CTSA sites offer a unique

opportunity for researchers to integrate drug abuse epidemiology and health services research in these settings. Applicants are asked to propose innovative drug abuse research which builds upon the resources available at CTSA sites, resources which would include CTSA efforts to strengthen networks of clinical sites and to establish innovative information technologies, phenotyping systems, and biobanks. A broad range of drug abuse epidemiology and health services research areas will be supported under the auspices of this FOA.

Health Disparities in NIDDK Diseases (R01)

PA-09-262

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)
National Institute of Nursing Research (NINR)

The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) and the National Institute of Nursing Research (NINR) of the National Institutes of Health (NIH) seek research to understand and mitigate issues of health disparities in high priority diseases within their scope, including diabetes, obesity, nutrition-related disorders, hepatitis C, gallbladder disease, H. Pylori infection, sickle cell disease, kidney diseases, urologic diseases, hematologic diseases, metabolic, gastrointestinal, hepatic, and renal complications from infection with HIV. NINR promotes and improves the health of individuals, families, communities, and populations, supports and conducts clinical and basic research and research training on health and illness across the lifespan.

Home and Family Based Approaches for the Prevention or Management of Overweight or Obesity in Early Childhood (R21) and (R01)

PA-10-128 and PA-10-127

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

National Heart, Lung and Blood Institute (NHLBI)

Office of Behavioral and Social Sciences Research (OBSSR)

Office of Disease Prevention (ODP)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Heart, Lung and Blood Institute (NHLBI), the Office of Behavioral and Social Sciences Research (OBSSR) and the Office of Disease Prevention (ODP), National Institutes of Health, invites exploratory pilot/feasibility study and small clinical trial (R21) applications from institutions/organizations that propose to test novel home or family based interventions for the prevention or management of overweight in infancy and early childhood. Tested interventions can use behavioral (including dietary and physical activity), environmental, or other relevant approaches. Applications should focus on infants and young children (to age six years) and emphasize the role of home environment and the influence of family/extended family members and parents (including guardians/substantial care-providers) within the child's home environment. The direct goal of this initiative is to fund research that will advance knowledge for innovative approaches to the prevention or management of overweight in children less than 6 years of age, with potential for future research clinical trial applications either in the home or linked to a community setting. Research should consider the role of families in the initiation, support, and reinforcement of fundamental food and beverage consumption, physical activity practices, and sedentary behaviors. In addition it is of interest to elucidate various underlying behavioral determinants that are crucial to initiate or sustain changes in behaviors that impact energy balance. Research designs may include linkages with other settings (e.g., daycare, pre-school, or other community venues) or other care providers (e.g., health care providers or teachers) but must include infants or children less than age six years as the primary study participant along with parents, and/or other family members residing with the child. The overarching goal is to identify interventions that influence parent and child behaviors that contribute to inappropriate weight gain, and thereby improve subsequent health status in childhood, adolescence, and adulthood for which overweight is a known risk factor.

ARRA OS Recovery Act Limited Competition: Impact of Decision-Support Systems on the Dissemination and Adoption of Imaging-Related Comparative Effectiveness Findings (UC4)

RFA-OD-10-012

National Institute of Biomedical Imaging and Bioengineering (NIBIB/NIH)

The goal for this program is to accelerate dissemination and adoption of current imaging-related comparative effectiveness research findings by studying whether real-time decision support systems integrated into clinical health IT systems are an effective means of disseminating evidence-based findings. Successful adoption is considered to be an integrated system which is routinely used by clinicians as part of their workflow and efficiently and effectively assists them in making well-informed decisions. The long-term goal, beyond the scope of this program, is to provide models for how these systems can be incorporated into healthcare providers nationwide if they are shown to be an effective method for disseminating CER-findings.

With a project duration of only two years, applicants must have sufficient health IT infrastructure without existing clinical decision support systems incorporating CER findings to be in a position to meet the objectives of this announcement. Applicants are encouraged to work with institutions with clinical decision support systems incorporating CER findings and/or vendors to meet milestones. Healthcare systems in IDeA states and those serving vulnerable and underserved populations are strongly encouraged to apply.

Amount: \$1,000,000

NCMHD Disparities Research and Education Advancing Mission (DREAM) Career Transition Award (K22)

RFA-MD-10-001

National Center on Minority Health and Health Disparities (NCMHD)

This purpose of the NCMHD DREAM Career Transition Award (K22) is to facilitate the transition of early stage investigators working in health disparities or areas that address health disparity conditions and populations from the mentored stage of career development to the independent stage of investigator-initiated health disparities research. The program will provide an opportunity for investigators to develop solid research skills during the initial period of up to two years of study and research within the environment of the NIH Intramural Research Programs located at the NIH. The award may also include a follow-on period of up to three years of salary and mentored research support at the candidate's current institution or organization or an academic or research grantee institution of the candidate's choice. This period of extramural support will facilitate the transition to independence as a researcher in health disparities research.

Small Grants for Behavioral Research in Cancer Control (R03)

PA-09-003

National Cancer Institute (NCI)

National Institute of Nursing Research (NINR)

This funding opportunity announcement (FOA), issued by the National Cancer Institute (NCI) and the National Institute of Nursing Research (NINR), at the National Institutes of Health (NIH), is intended to provide support for either new investigators in cancer-related behavioral research, or investigators who want to refocus their research interests toward behavioral research in cancer control. The program is designed to facilitate the growth of a nationwide cohort of scientists with research experience in behavioral cancer control and design of public health interventions. Preliminary data for the proposed projects are not required. Overarching goals are to: (1) encourage new investigators to enter the field of behavioral research in cancer control and initiate their long-term career development aimed at becoming independent investigators in the field, and (2) support research on transfer of behavioral science knowledge into cancer control practice.

Amount: \$100,000

Understanding the Effects of Emerging Cellular, Molecular, and Genomic Technologies on Cancer Health Care Delivery

[(R01) PA-09-004] and [(R21) PA-09-005]

PA-09-004 and PA-09-005

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), National Institutes of Health (NIH), invites grant applications for health services research that address the utilization of emerging cellular, molecular, and genetic or genomic (CMG) technologies in cancer care. The studies will assess CMG technologies in relation to: (a) quality of care; (b) organizational barriers and change factors in utilization; (c) cost and cost-effectiveness; (d) disparities in access and efficacy; (e) monitoring of cross-sectional patterns of care and time trends; (f) impact on existing standards of care; and (g) influence on cancer outcomes such as incidence, progression, mortality, survival, and quality of life. This FOA specifically encourages research on commercially available CMG clinical tools already in use, as well as experimental tools in the later stages of development and/or in the regulatory approval pipeline. The funding opportunity also encourages interdisciplinary collaborations between health services researchers and those in the clinical and/or translational sciences.

Development, Application, and Evaluation of Prediction Models for Cancer Risk and Prognosis (R01) and (R21)

PA-10-025 and PA-10-026

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), encourages research applications from clinicians, epidemiologists, geneticists, statisticians, and translational researchers working in the field of cancer control and prevention to improve existing models for cancer risk and prognosis by developing innovative research projects that use existing data; develop new models for cancer risk and prognosis; and validate new models and evaluate their utility in research and clinic settings. To explore this opportunity, the NCI Division of Cancer Control and Population Sciences (DCCPS) and the Division of Cancer Treatment and Diagnosis (DCTD) encourage applications for research projects to develop, apply, and evaluate new and existing cancer risk and prognostic prediction models for use by researchers, clinicians, and the general public. This FOA is designed to provide a mechanism of support for investigators to address two major challenges in model development, which are: integrating diverse types of data (e.g., clinical, demographic, pathologic, environmental, epidemiologic, outcomes, and genetic data from varied data marts or warehouses); and ensuring adequate validation (i.e., using multiple separate populations to define sensitivity, specificity, and positive and negative predictive values).

UPDATE TO RFA-AE-10-001: OS Recovery Act Limited Competition: Accelerating Adoption of Comparative Effectiveness Research Results by Providers and Patients (R18) - Announcing Additional Funds Availability and Clarifying Eligible Institutions/Organizations

NOT-AE-10-001

Department of Health and Human Services (DHHS)

American Reinvestment and Recovery Act of 2009 (ARRA)

In January, 2010, ASPE announced the availability of funds under the American Recovery and Reinvestment Act of 2009 (ARRA) for strategies for accelerating the adoption of comparative effectiveness research (CER) results by providers and patients (RFA-AE-10-001). Since then, additional funds have been made available for this RFA in order to allow for the funding of 1 to 3 additional meritorious proposals, thus broadening the impact of this critical component of the CER enterprise. These additional funds will lead to a greater understanding of "best practices" for the adoption of CER by both providers and patients. In addition, ASPE is clarifying additional eligible institution/organization characteristics.

This Notice serves to notify potential applicants of the following changes or clarifications related to the Funds Available and Eligible Institutions/Organizations:

Funds Available and Anticipated Number of Awards. Using funds provided by the Office of the Secretary of the Department of Health and Human Services, ASPE now intends to commit \$17,000,000 for use under this FOA. We anticipate that 6 to 10 awards will be made for fiscal year 2010, pending the number and quality of applications and availability of funds.

Eligible Institutions/Organizations. Eligible institutions or organizations with the following characteristics may include the following:

Integrated health care systems

Integrated provider systems

Academic Medical Centers

Provider consortia

Community Health Center Networks

Private payers

Other non-governmental organizations that administer or directly provide health care services

Organizations that serve health care consumers

University-based school (e.g. School of Public Policy or Public Health)

Private research institutes

Department Of Defense Hive/Aids Prevention Program

DHAPP-BAA-10-001

Department of Defense (DOD)

DHAPP continues to rely upon the vital support of various partners, such as non-governmental organizations (NGOs), in implementing HIV prevention, care and treatment programs across the globe. Each country has a customized plan to help the countries' militaries bring its HIV/AIDS programs to sufficient scale to help reduce the spread of the epidemic and mitigate its impact.

DHAPP's current priority activities include the following:

- Institutional capacity building and developing military specific HIV strategic and operational plans that incorporate effective monitoring and evaluation procedures.
- Training of master trainers and peer educators.
- "Troop Level" HIV/AIDS prevention education and behavior change communication.
- Evaluating specific prevention interventions in military contexts
- Providing infrastructure and equipment to support HIV testing, care and/or treatment.
- Increasing testing of all military personnel.
- Developing HIV laboratory diagnostic and monitoring capabilities.
- Increasing clinical capability and other human resources for health care of those infected with HIV.
- Developing or revising military specific HIV policies that specifically address leadership roles, gender norms, gender based violence, stigma and discrimination and structural components necessary for access to care.
- Increasing male circumcision (MC) in high prevalence countries who are supportive of MC as an effective prevention intervention.
- Providing peacekeeping prevention and care interventions in militaries that contribute significant peacekeepers.

This BAA is intended to solicit existing partners and establish new partners in order to expand the DHAPP program.

Amount: \$50,000-\$300,000

LOI:

Deadline: This announcement will remain open until 30 September 2011. White Papers may be submitted at any time during this period.

NIOSH Support for Conferences and Scientific Meetings (R13)

PAR-08-072

Centers for Disease Control and Prevention

CDC's Procurement and Grants Office has published a funding opportunity announcement entitled, "NIOSH Support for Conferences and Scientific Meetings(R13)." The purpose of the program is to support high quality conferences/scientific meetings that are relevant to its scientific mission and to the public health.

The goal of the NIOSH research program is to develop an understanding of the risks and conditions that are associated with occupational diseases and injuries, to explore methods for reducing risks and for preventing or minimizing exposure to hazardous conditions in the workplace, and to translate significant scientific findings into prevention practices and products that will effectively reduce work-related illnesses and injuries. Specific research priorities are derived from the National Occupational Research Agenda (NORA) which is used by NIOSH for determining how best to carry out its mission of providing national and world leadership in preventing work-related illnesses and injuries.

Amount: \$20,000

LOI: Sixty calendar days in advance of standard Application

Deadline: Standard dates apply (April 12, August 12, December 12)

Recovery Act Limited Competition: The NIH Director's ARRA Funded Pathfinder Award to Promote Diversity in the Scientific Workforce (DP4)

RFA-OD-10-013

All NIH Institutes and Centers participate in this NIH-wide announcement.

This NIH Funding Opportunity Announcement (FOA), supported by funds provided to the NIH under the American Recovery and Reinvestment Act of 2009 (Recovery Act or ARRA), Public Law 111-5, invites applications for the NIH Directors ARRA Pathfinder Award to Promote Diversity in the Scientific Workforce. The NIH recognizes a unique and compelling need to promote diversity in the biomedical, behavioral, clinical and social sciences research workforce. The NIH expects all of its efforts to diversify the workforce to lead to the recruitment of the most talented researchers from all groups; to improve the quality of the educational and training environment; to balance and broaden the perspective in setting research priorities; to improve the ability to recruit subjects from diverse backgrounds into clinical research protocols; and to improve the Nation's capacity to address and eliminate health disparities. .This new

FOA introduces a new research grant program to encourage exceptionally creative individual scientists to develop highly innovative and possibly transforming approaches for promoting diversity within the biomedical research workforce. To be considered highly innovative, the proposed research must reflect ideas substantially different from those already being pursued or it must apply existing research designs in new and innovative ways to unambiguously identify factors that will improve the retention of students, postdocs and faculty from diverse backgrounds. Awardees must commit a major portion (generally 30% or more) of their research effort to activities supported by the Directors Pathfinder Award and the proposed research must be endorsed by the highest levels of institutional management.

Amount: \$2,000,000

LOI: April 5, 2010

AHRQ Small Grant Program for Conference Support (R13)

PA-09-231

Agency for Healthcare Research and Quality (AHRQ)

The Agency for Healthcare Research and Quality (AHRQ), announces its continued interest in supporting conferences through its Small Grant Program for Conference Support. AHRQ seeks to support conferences that help to further its mission to improve the quality, safety, efficiency, and effectiveness of health care for all Americans. The types of conferences eligible for support include: 1) Research development - conferences where issues or challenges in the practice and delivery of health care are defined and a research agenda or strategy for studying them is developed; 2) Research design and methodology - conferences where methodological and technical issues of major importance in the field of health services research are addressed or new designs and methodologies are developed; 3) Dissemination and implementation conferences - where research findings and evidence-based information and tools are summarized, communicated and used by organizations and individuals that have the capability to use the information to improve the outcomes, quality, access to, and cost and utilization of health care services; and/or, 4) Research training, infrastructure and career development - conferences where faculty, trainees and students are brought together with stakeholders to develop, share or disseminate research products, experiences, curricula, syllabi, training competencies. AHRQ is especially interested in supporting conferences that demonstrate strategies that include plans for disseminating complimentary conference materials and products beyond the participants attending the event. Such strategies might include, but are not limited to, submitting articles for publication, posting information on a Web site, and seeking formal opportunities to discuss conference information with others.

Amount: \$50,000

Researching Implementation and Change while Improving Quality (R18)

PAR-08-136

Agency for Healthcare Research and Quality

The Agency for Healthcare Research and Quality (AHRQ) announces the Agency's interest in supporting grants to rigorously study the implementation of quality improvement strategies and provide generalizable scientific findings about the implementation of the quality improvement strategy, related organizational changes, and their impact. There is increasing evidence that success in achieving quality improvement goals is at least partially attributable to implementation processes and contexts and not just to the nature of the quality improvement strategy. The research funded through this announcement may be conducted by the team designing/implementing the quality improvement strategy or it may be conducted by a separate team. The quality improvement strategy must be one that is expected to result in major improvements in health care delivery that will enhance patient outcomes. Research design and execution will yield results providing AHRQ, providers, patients, payers, policymakers, and the public with contextual details and high level of confidence about what works and what doesn't in improving health care in the United States.

Amount: varies but will not exceed \$300,000 annually

GPHRC Translational Research RFA

The Center for Clinical and Translational Research and Great Plains Health Research Consortium UNMC's Center for Clinical and Translational Research (CCTR) has brought together regional institutions into a health research consortium, the "Great Plains Health Research Consortium" (GPHRC). The GPHRC has submitted a NIH Clinical and Translational Science Award (CTSA) proposal which hopes to speed research translation from "bench to bedside" and clinical trials into community-wide applications. UNMC is sponsoring the first GPHRC Seed Grant program, with the primary intent being to bring together new research teams representing 2 or more GPHRC institutions to generate the pilot data needed to support a new extramural grant proposal within the next 1-3 years. Applications that address the health priority areas of the GPHRC as identified below will be given priority in review for this RFA:

- Health disparities including rural health disparities
- Cancer
- Obesity-Diabetes-Vascular Disease (inclusive of cardiovascular and all other types of vascular disease)
- Infectious Diseases
- Musculoskeletal Disease
- Neurologic and Psychobehavioral Disease
- Alcohol and Smoking Related Disease
- Transplantation

Amount: \$100,000

Notice of Intent to Publish a Request for Applications on New Strategies for Growing 3D Tissues (R01/R21)

NOT-HL-11-105

National Heart, Lung, and Blood Institute (NHLBI)

The National Heart, Lung, and Blood Institute (NHLBI) intends to promote a new initiative by publishing a Request for Applications (RFA) to solicit applications to improve our understanding of how cells respond to their environment and develop accurate assays and methods to understand how angiogenesis and organogenesis may instruct the creation of 3D engineered cellular aggregates. This program is expected to develop new technologies by tissue engineers who effectively collaborate with scientists with relevant expertise in developmental and cell biology, systems biology, chemistry, physics and organ physiology. The overall purpose of this program is to support highly integrated multidisciplinary scientific teams to advance the field beyond the more basic levels of structural and functional complexity and learn how to use the signals and microenvironments which direct normal angiogenesis and organogenesis in developing vertebrates. These advances will be aimed towards addressing our knowledge gaps in tissue repair and regeneration. Institutes expected to participate in the RFA include the NHLBI, the National Institute of Biomedical Imaging and Bioengineering (NIBIB), and the National Institute for Arthritis and Musculoskeletal and Skin Diseases (NIAMS).

This Notice is being provided to allow potential applicants sufficient time to develop meaningful collaborations and responsive projects.

The RFA is expected to be published in May 2010 with an application receipt date in September 2010.

USA Medical Research and Materiel Command Broad Agency Announcement

W81XWH-BAA10-1

Department of Defense (DOD)

This Announcement provides a general description of the Command's research programs, including specific areas of interest; general information; the evaluation and selection criteria; and proposal preparation instructions.

- 1) The Military Infectious Diseases Research Program (MIDRP) focuses on vaccines, antiparasitic drugs, deployable field clinical diagnostics, and vector control pertinent to naturally-occurring endemic diseases with demonstrated or potential capability to decrease military operational effectiveness.
- 2) The Combat Casualty Care Research Program (CCCRP) provides integrated capabilities for far-forward medical care to reduce the mortality and morbidity associated with major battlefield wounds and injuries.
- 3) The Military Operational Medicine Research Program (MOMRP) provides biomedical solutions that protect Soldiers and enhance their performance in operational and training environments that include multiple stressors. [a. Injury Prevention and Reduction; b. Psychological Health and Resilience; c. Environmental Health and Protection; d. Physiological Health]
- 4) The Medical Biological Defense Research Program provides medical countermeasures for biological warfare agents. These countermeasures include specialized medical materiel or procedures designed to enhance protection.
- 5) The Medical Chemical Defense Research Program seeks to preserve combat effectiveness by timely provision of medical countermeasures in response to Joint Service chemical warfare defense requirements.
- 6) The Clinical and Rehabilitative Medicine Research Program (CRM RP) focuses on the innovations required to reset our wounded warriors, both in terms of duty performance and quality of life. The CRM RP focuses its efforts on the following five research areas: neuromusculoskeletal injury (including amputees), ocular and visual system injury, hearing and vestibular systems injury, chronic pain, and regenerative medicine.

FY10 Neurofibromatosis Research Program (NFRP)

W81XWH-10-NFRP-CTA

W81XWH-10-NFRP-IIRA

W81XWH-10-NFRP-IIFRA

DOD

Congressionally Directed Medical Research Programs (CDMRP)

The vision of the FY10 NFRP is to find and fund the best research to eradicate the clinical impact of NF. Toward this goal, the NFRP seeks to:

- Support innovative, high-impact research that will foster new directions for and address neglected issues in NF research,
 - Sponsor multidisciplinary and multi-institutional collaborations that will bring new perspectives to the field,
 - Foster the next generation of NF investigators,
 - Promote translational and clinical studies to move promising ideas from bench to bedside,
 - Develop a balanced portfolio of meritorious research related to all aspects of NF1, NF2, and Schwannomatosis.
-

Areas of Encouragement: The FY10 NFRP encourages research proposals that specifically address the critical needs of the NF community in the following areas:

- Complications of NF with high mortality such as neoplasms and cerebrovascular abnormalities;
- Complications of NF with high morbidity such as skeletal maladies, learning deficits, hormone-associated effects, and pain;
- Refinement and standardization of imaging techniques, molecular and cellular markers, and quality of life metrics for use in future clinical trials; and
- Translational research such as the development or preclinical testing of therapeutic agents for the treatment of NF.

Critical Challenges in Parkinson's Disease

New

Michael J Fox Foundation (MJFF)

The foundation has announced that up to \$5.75 million in total funding will be available through three 2010 Critical Challenges: Alpha-synuclein Therapeutics — A total of \$3 million in funding is available for pre-clinical projects to accelerate therapeutic development of the PD-implicated gene alpha-synuclein, which many researchers believe holds potential to lead to a new treatment that could slow or stop the progression of PD.

Pharmacodynamic Biomarkers of LRRK2 Activity — A total of \$2 million in funding is available for efforts to develop drug-activity biomarkers that can improve outcomes from future clinical trials of treatments targeting the PD-implicated gene LRRK2. The foundation will give preference to proposals seeking to verify and validate promising, pre-defined candidate LRRK2-associated biomarkers.

Novel Hypotheses in Parkinson's Disease: Investigating Clinical Data and Human Tissue — A total of \$750,000 is available to provide scientists around the globe with the opportunity to collaborate with the Arizona Parkinson's Disease Consortium. Funded investigators should propose drug development projects that can benefit from access to APDC's exceptional bank of well-characterized biologics, postmortem tissue, and associated clinical data.

SBS Awards

Society for Biomolecular Screening (SBS)

The Society for Biomolecular Sciences supports an award of \$5,000 made at least every three years, to recognize outstanding achievements in research, innovation, ground breaking foundation, or seminal contributions that have proven to be broadly applicable to biomolecular screening or pharmaceutical/ agricultural lead discovery. Furthermore, the award seeks to recognize those who have distinguished themselves within the scope of the society's mission. Independence of thought, originality of approach, clarity of vision, and a consistent record of achievement are important criteria. Quality and depth rather than the number of contributions shall be emphasized.

The Society for Biomolecular Sciences supports annual awards of \$1,000 to recognize a member for a significant technical accomplishment, exceeding a benchmark or milestone in screening or the lead discovery process, or an innovative and integrated use of mature technologies. More than one award may be conferred annually.

Amount: \$5,000

Physiological and Structural Systems

PD 07-1141

NSF

The Physiological and Structural Systems Cluster supports research aimed at furthering the understanding of organisms as integrated units of biological organization. The Cluster considers proposals focused on interacting physiological and structural systems, their environmental and evolutionary contexts, and how these components are constrained by their integration into the whole organism. Projects that use systems approaches to understand why particular patterns of architecture and regulatory control have emerged as general organismal properties are particularly encouraged. Understanding how and why emergent organismal properties such as robustness, adaptability and resilience arise in the context of environmental, genetic, biochemical and morphological variation are of interest. The Cluster encourages model building to augment traditional experimental approaches in order to guide research on complex functional networks. Multidisciplinary approaches to the study of organismal systems including research at the interfaces of biology, physics, chemistry, mathematics, computer science and engineering are encouraged.

Amount: \$140,000

LOI: N/R

Solicitation of Assays for High Throughput Screening (HTS) in the Molecular Libraries Probe Production Centers Network (MLPCN) (R03)

PAR-08-035

NIH Roadmap Initiative

The NIH Molecular Libraries Roadmap Initiative wishes to solicit HTS assay applications from the scientific community from investigators who have the interest and capability to work with the Molecular Libraries Probe Production Centers Network (MLPCN) in support of chemical probe development. This FOA promotes discovery and development of new chemical probes as research tools for use by scientists in both the public and private sector to advance the understanding of biological functions and disease mechanisms. This initiative is one of the integrated components of the NIH Molecular Libraries Roadmap initiative that offers biomedical researchers access to large-scale automated high throughput screening (HTS) centers in the MLPCN, diverse compound libraries in the Small Molecule Repository (MLSMR) and information on biological activities of small molecules in the PubChem BioAssay public database.

Amount: \$25,000

LOI: Apr. 26, 2010; and Aug. 24, 2010

Deadline: May 26, 2010; and Sept. 24, 2010

Large Scale Production of Perturbagen-Induced Cellular Signatures (U54)

RFA-RM-10-003

National Institutes of Health (NIH)

National Human Genome Research Institute (NHGRI)

National Heart Lung and Blood Institute (NHLBI)

This FOA seeks to establish a pilot-scale data production effort to systematize approaches for identifying mechanism-based associations among the effects of disparate biological perturbations, a knowledge base that can be used to study functional relationships among the responding cellular components. The Library of Integrated Network-Based Cellular Signatures (LINCS) program will support the high-throughput collection and integrative computational analysis of informative molecular activity and cellular feature signatures generated in response to a variety of perturbing agents, including siRNAs and small bioactive molecules, which are applied to a set of carefully selected cell types. The resulting knowledge will form the basis of a long-lived resource that can be used broadly by the community. For example LINCS may inform association of disease states with detailed molecular or cellular phenotypes, and ultimately associate disease with specific gene networks, or inform the mechanism of action of known drugs. This FOA seeks to fund pilot-scale data production efforts that will produce a usable initial resource while addressing the following issues: optimization of methods, integration of data, and scalability. Pilot production efforts will interact with multiple future additional components (data analysis and informatics tools; and development and integration of new production-ready technologies) of the LINCS program.

Amount: \$4,200,000

LOI: April 1, 2010

Deep Sequencing and Analysis of Pharmacogenomic Regions: Discovery and Analysis of Genetic Variants Contributing to Drug Abuse and Addiction (R01)

RFA-DA-10-019

National Institute on Drug Abuse (NIDA)

Genome-wide association studies (GWAS) have been critical for identifying genomic regions associated with addiction phenotypes, and have highlighted several areas that require further refinement using deep sequencing approaches. The goal of this FOA is to support studies proposing to use next-generation sequencing technologies to identify the structural variants and SNP variants with rare to moderate frequencies that affect addiction risk in well-characterized samples with drug abuse phenotypes. Applications may propose strategies for deep sequencing based on family based designs; deep sequencing of regions identified by GWAS to be associated with addiction risk; sequencing candidate genes in individuals with extreme phenotypes; or other analytic approaches that capitalize on the genetic architecture. Applicants must use existing DNA samples with appropriately obtained consents for broad data sharing.

Amount: \$12,500,000

Structural Analyses of the Ligand-Binding Properties of Taste and Smell Receptors (R01)

PA-09-058

National Institute on Deafness and Other Communication Disorders (NIDCD)

This Funding Opportunity Announcement (FOA) issued by the National Institute on Deafness and Other Communication Disorders (NIDCD), encourages grant applications from institutions/organizations designed to foster innovative collaborative research to characterize the structural properties of taste and smell receptors. Additional emphasis is placed on the characterization of the interactions among odors, pheromones, and taste substances with their cognate receptors, and the identity of the critical ligand-receptor binding sites that determine sensitivity and selectivity. One aim of this FOA is to encourage collaborations among chemosensory molecular biologists and biochemists with expertise in the isolation and characterization of membrane proteins, and biophysicists familiar with crystallography, NMR and other analytical tools used in structural analyses.

Proteomics in Auditory Developmental and Disease Processes (R21)

PA-10-078

National Institute on Deafness and Other Communication Disorders (NIDCD)

The following examples are not meant to be comprehensive or restrictive, but rather represent projects relevant to the auditory system.

Examples of projects responsive to this FOA include but are not limited to:

Proteomic analysis of specific cell types of the inner ear, other auditory pathways, and/or their subcellular structures.

Proteomic analysis of specific otocyst cell/tissue types through a variety of developing stages.

Comparative analysis between proteome and transcriptome of a defined auditory cell and/or tissue type; comparative determination between proteomic and transcriptome results.

Comparative analysis of infection state in middle ear tissue, cell type, in response to invasion with otitis media pathogens; comparative proteomic analysis of infectious pathogens involved in middle ear infections upon biofilm or infection stimulus.

Proteomic analysis of auditory genetic disorders, presbycusis, environmental noise or drug trauma; biological and/or clinical in design.

Proteomic analysis of native purified and/or in vitro propagated cultures of putative auditory progenitor cells; comparative studies of transdifferentiated/induced auditory cells and subtypes.

Use of proteomic approaches to study the signal transduction networks related to transcription factors, cell surface receptors, growth factors, and other biomarkers relevant to auditory development.

Proteomic identification of novel signaling molecules and pathways involved in cell development, differentiation, communication, function and destruction, as applied to auditory signaling processes.

Development of novel proteomic bioinformatics for annotating genomic and protein sequence information for auditory function.

Innovation in Molecular Imaging Probes (R01)

PAR-09-016

National Institute of Biomedical Imaging and Engineering

National Institute on Aging

National Institute of Arthritis and Musculoskeletal and Skin Diseases

Eunice Kennedy Shriver National Institute of Child Health and Human Development

National Institute

This FOA is issued by the National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health. This FOA is a follow up of a previous Roadmap RFA (RM-04-021 "Innovation in Molecular Imaging Probes"). The purpose of this initiative is to encourage the development of novel molecular imaging approaches that can detect and image specific molecular activities in vivo, and have the potential for clinical applications. Novel molecular imaging approaches developed through this initiative can focus on one (or both) of the following long-term translational goals: (1) imaging the characteristic markers, and function, of normal cells in control human subjects and patients, and (2) imaging the characteristic markers, and biochemical or physiological abnormalities, of disease cells in patients. Potential abnormalities that could provide early markers for disease include (but are not restricted to): inflammation, fibrosis, immune cell activation, altered signal transduction pathways, altered gene expression pathways, and altered post-translational modification of proteins. This initiative solicits applications that explore innovative "high-impact" approaches, rather than incremental technology development that is already supported by current NIH programs.

Prioritizing Molecular Targets for Cancer Prevention with Nutritional Combinations (R01)

PA-10-035

National Cancer Institute (NCI)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI), and the Office of Dietary Supplements (ODS), of the National Institutes of Health (NIH), invites research applications to enhance our understanding about the dynamic interrelationship that exists between bioactive food components (and/or combinations thereof) and cancer prevention. Although much evidence exists that dietary components are linked to cancer prevention, the interactions among dietary bioactive compounds and food combinations remains under-investigated. Applications are encouraged to consider either multiple dietary bioactive components, intact foods or multiple foods utilizing physiologically relevant concentrations of the agents. New genetic technologies may be employed to study the impact of dietary components on complex cellular and molecular networks, as part of the effort to better understand the basis for the multifaceted interactions of food components with cancer prevention mechanisms. Specifically, applications that apply new high-throughput genomic, epigenomic, proteomic, and metabolomic technologies to prioritize molecular targets of dietary components are highly encouraged. The sites of action that may be evaluated include carcinogen metabolism, DNA repair, cell proliferation, apoptosis, differentiation, hormonal regulation, energetics, inflammation, and/or angiogenesis. In addition, applications should either evaluate multiple molecular targets within a cancer process or multiple processes in order to prioritize which process(es) is/are most involved in bringing about a phenotypic change. It is hoped that advances in this area may assist in optimizing cancer prevention while minimizing potential toxicity due to food components. The resulting information will help define which foods or food components should be considered in isolation or in combination when developing dietary strategies to reduce cancer risk and/or modify tumor behavior.

Amount: varies

LOI: N/R

Strategic Partnering to Evaluate Cancer Signatures [SPECS II] (U01)

PAR-10-126

National Cancer Institute (NCI)

This Funding Opportunity Announcement (FOA), issued by the National Cancer Institute (NCI) of the National Institutes of Health (NIH), encourages the submission of grant applications for support of the clinical application of multi-analyte molecular signatures derived from comprehensive molecular annotation of tumors. There is growing recognition in the clinical cancer research community that annotation of tumor specimens with data that integrates information about molecular alterations at the levels of DNA, RNA, and protein provides not only a more complete understanding of tumor biology but also provides a significant opportunity for developing new clinical tools to improve cancer treatment. Translating the knowledge gained from this molecular annotation into tools that can be used in clinical decision-making remains a major challenge. The purpose of this initiative is to build on recent demonstrations that molecular signatures correlate with important clinical parameters in cancer. The goal of this initiative is also to create publications and data sets that will be available and accessible to the scientific community in order to further the development, design, and conduct of future clinical trials (e.g., incorporation of molecular signatures into future clinical trials and large clinical validation studies) and to encourage appropriate commercialization to benefit the public health. The NCI invites investigators to form strategic partnerships that will bring together the multi-disciplinary expertise and resources needed to determine how the information derived from comprehensive molecular analyses can be used to improve patient care and, ultimately, patient outcomes.

Advances in Bioscience for Airmen Performance

BAA-09-02-RH

Air Force Research Laboratory, Human Effectiveness Directorate, Biosciences and Performance Division (AFRL/RHP)

The 711th Human Performance Wing, Human Effectiveness Directorate is soliciting white papers under this announcement for innovative science and technology projects to support advanced bioscience research. Specifically, the Biosciences and Performance Division is seeking unique and innovative research concepts that address its technical mission areas. Research is sought primarily in the following four technical areas: 1) Applied Biotechnology, 2) Biobehavioral Performance, 3) Biomechanics, and 4) Counter proliferation.

1) Applied Biotechnology - Goal is to develop and exploit advances in biotechnology and associated nanotechnologies to enhance performance and situational awareness of the force.

2) Biobehavioral Performance – Goal is to develop bio-based methods and techniques to sustain and optimize airmen's cognitive performance.

3) Vulnerability Analysis – Goal is to rapidly identify human threat conditions, and sustain/expand Airmen performance in stressful environments. It includes research in physical and physiological biosignatures, neuroscience, anthropometry, biomechanics, human modeling, database networking, and data mining.

4) Counter proliferation – Goal is to improve the Air Force's ability to locate, identify, track, target, and destroy biological warfare agents (BWA) and other weapons of mass destruction (WMD), as well as anticipate and mitigate WMD effects on AF operations.

Therapies and Therapeutics

Lab to Marketplace: Tools for Brain and Behavioral Research (SBIR [R43/R44])

PA-08-071

NIH

The NIH Blueprint for Neuroscience Research is a framework to enhance cooperative activities among the NIH Office of the Director and 15 NIH Institutes and Centers that support research on the nervous system. This Funding Opportunity Announcement (FOA) is released in affiliation with the Neuroscience Blueprint, with Institutes and Centers participating independently, and with participation by Institutes and Centers that are not part of the Blueprint. This FOA encourages the translation of technologies for brain or behavioral research from academic and other non-small business research sectors to the marketplace. Solicited from Small Business Concerns (SBCs) are Small Business Innovation Research (SBIR) grant applications that propose to further develop, make more robust, and make more user-friendly such technologies in preparation for commercial dissemination. It is expected that this activity will require partnerships and close collaboration between the original developers of these technologies and SBCs, which may be accomplished in any of a number of ways, including the use of multiple principle investigators.

Optimization of Small Molecule Probes for the Nervous System (STTR [R41]) and (SBIR [R43])

PAR-09-259 and PAR-09-260

National Institute of Neurological Disorders and Stroke (NINDS)

National Eye Institute (NEI)

National Institute on Aging (NIA)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute on Drug Abuse (NIDA)

This Funding Opportunity Announcement (FOA) encourages Small Business Technology Transfer (STTR) grant applications from small business concerns (SBCs) that propose to develop new small molecule probes for investigating biological function in the nervous system via the application of advanced medicinal chemistry and the biological testing of compounds. Eligible SBCs will have identified probe candidates via screening of small molecule collections, using in vitro assays of biological activity developed to interrogate these collections, and be able to show that the structural features of these small molecules are related to their biological activity. Applications should nominate small molecule probe candidates from distinct structural series for the further, iterative design and testing of analogues in structure-activity relationship studies, using in vitro assays of biological function adapted to the medium throughput screening requirements of this work. These studies should have the goal of developing a small molecule probe possessing the attributes (eg: affinity, selectivity, activity) required for its use in future pharmacological studies proposed by the SBC. Applicants are strongly encouraged to utilize publicly available cheminformatic capabilities for the acquisition of compounds, and semi-custom synthesis of analogues, which is required of these studies.

Amount: \$300,000

PAR-08-233

National Institute of Neurological Disorders and Stroke (NINDS)

The goal of this funding opportunity announcement (FOA) is to support pre-clinical development and testing of new therapies for neurological disorders. The program will facilitate solicitation, development, and review of therapy-directed projects to accelerate the translation of basic research discoveries into therapeutic candidates for clinical testing. This program is specifically directed at projects that include therapeutic leads with demonstrated activity against the intended disease target. The program supports pre-clinical optimization and testing of these leads and projects must be sufficiently advanced that an IND or IDE application to the FDA can be submitted by the end of the project period. The program does not support early-stage therapeutic discovery activities such as high throughput screening. The program also excludes clinical research, basic research, and studies of disease mechanism. This is a milestone-driven cooperative agreement program involving participation of NINDS staff in the development of the project plan and monitoring of research progress

NINDS Announces Availability of Funds for Competitive Revision Applications for Grand Challenge on Optimal Cortical Control of DARPA Revolutionizing Upper-Limb Prosthetics (R01 and R37)

NOT-NS-10-013

National Institute of Neurological Disorders and Stroke (NINDS)

The purpose of this notice is to encourage requests for competitive revisions to research projects currently funded by NIH R01 and R37 grant mechanisms, appropriate for support on research and development for a Grand Challenge on achieving optimal electrocorticography (ECoG) based cortical control of the Revolutionizing Upper-limb Prosthetics 2009 developed by the U.S. Defense Advanced Research Projects Agency (DARPA). The Grand Challenge will be to achieve reaching and grasping of objects by the DARPA Arms in a subject's natural work space, by obtaining maximum cortical control that can be realized on the highly anthropomorphic prosthetic arm and hand.

Collaborative R34s for Pilot Studies of Innovative Treatments in Mental Disorders (Collaborative R34)

PA-09-075

National Institute of Mental Health (NIMH)

National Center for Complementary and Alternative Medicine

This Funding Opportunity Announcement (FOA), issued by the National Institute of Mental Health (NIMH) and the National Center for Complementary and Alternative Medicine (NCCAM), seeks to support collaborative preliminary intervention studies to evaluate the feasibility, tolerability, acceptability and safety of novel mechanism drug candidates, promising investigational new drugs (INDs), or novel psychosocial strategies for the treatment of mental disorders and for obtaining the preliminary data needed as a pre-requisite to larger-scale (efficacy or effectiveness) intervention or services studies. This FOA should be used when at least two but no more than three sites are needed to complete the study. The collaborating studies should be organized in order to increase sample size, accelerate recruitment, and/or increase sample diversity and representation. For a linked set of collaborative R34s, each site shall have its own Project Director/Principal Investigator and provide for a mechanism for cross-site coordination, quality control, database management, statistical analysis, and reporting.

Amount: \$450,000

LOI: N/R

Key Words: **Mental Disorders, Drug Therapy**

Pilot Intervention and Services Research Grants (R34)

PAR-09-173

National Institute of Mental Health (NIMH)

The purpose of this Funding Opportunity Announcement (FOA) is to encourage research on 1) the development and/or pilot testing of new or adapted interventions, 2) the adaptation and/or pilot testing of interventions with demonstrated efficacy for use in broader scale effectiveness trials, or 3) innovative services research directions that require preliminary testing or development. The R34 award mechanism provides resources for evaluating the feasibility, tolerability, acceptability and safety of novel approaches to improving mental health and modifying health risk behavior, and for obtaining the preliminary data needed as a pre-requisite to a larger-scale (efficacy or effectiveness) intervention or services study. NIMH intervention and services research is aimed at preventing or ameliorating mental disorders, emotional or behavioral problems, the co-occurrence of mental, physical and substance abuse problems, HIV infections, and the functional consequences of these problems across the life span.

Amount: \$450,000

Development and Validation of Disease Biomarkers (R01)

PA-09-204

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) (<http://www2.niddk.nih.gov>)

National Institute on Alcohol Abuse and Alcoholism (NIAAA)

National Institute of Nursing Research (NINR)

Office of Dietary Supplements (ODS)

This Funding Opportunity Announcement (FOA) issued by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Institute on Alcohol Abuse and Alcoholism (NIAAA), the National Institute of Nursing Research (NINR), and the Office of Dietary Supplements (ODS) of the National Institutes of Health, will provide resources to validate candidate biomarkers for well-defined human diseases of the liver, kidney, urological tract, and digestive and hematologic systems, as well as endocrine and metabolic disorders, diabetes and its complications, and obesity, for which there are no or very few biomarkers, or for which standard biomarkers are currently prohibitively invasive or expensive. A biomarker is an indicator of a disease process, and could replace hard clinical end points as a measure of the effect of new therapies. Appropriate studies will validate candidate biomarkers in well-defined patient populations, provide new technologies to monitor biomarkers or establish reliable assays for validated markers. Progress in this area has the potential to advance translational research related to efficacy of treatments and bio-behavioral interventions. This FOA is not appropriate for biomarker discovery projects.

Pilot and Feasibility Awards

Research Grants

LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award

Cystic Fibrosis Foundation Therapeutics, Inc. (CFFT)

The CF Foundation (CFF) offers competitive awards for research related to cystic fibrosis. Studies may be carried out at the subcellular, cellular, animal, or patient levels. Two of these funding mechanisms include Pilot and Feasibility Awards and Research Grants. Since these applications are reviewed by the CFF's Research and Research Training Committee, those proposals that include methodologies requiring sampling of materials from human subjects will only be considered under this mechanism if the sampling method constitutes minimal patient risk (e.g., venipuncture) and patient samples or data are anonymous.

For applications where more invasive procedures are proposed or where patient samples or data will not be anonymous, please submit a Letter of Intent for a Clinical Research Award.

Also, the CF Foundation offers physician-scientist training awards, including the LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award.

Amount: varies

LOI: the CF Foundation will consider NIH applications that have received a competitive score but missed the payline under the CFF/NIH-unfunded award mechanism. These applications are accepted on an on-going basis.

Deadline: first Wednesday in September

Transformative Science Grants

The U.S. – Israel Binational Science Foundation (BSF)

The U.S. – Israel Binational Science Foundation (BSF) is pleased to announce the opening of the first round of applications in its new program devoted to Transformative Science grants. For complete details of the new program and submission instructions please consult the BSF website (www.bsf.org.il) under 'Guidelines & Forms'. The BSF definition of Transformative Science has been adopted from the NSF and is: "Research driven by ideas that have potential to radically change our understanding of an important scientific concept, or lead to the creation of a new paradigm, or a new field of science. Such research is also characterized by its challenge to current understanding or by its pathways to new frontiers".

Amount: \$300,000

LOI: May 11, 2010; Applications must be submitted jointly by at least one Israeli and one American scientist, as required in all BSF programs.

Deadline: October 12, 2010; by invitation only

Mentored Research Scientist Research Career Development Award (K01)

PAR-09-087

Office of Extramural Research, Education and Priority Populations (OEREP)

The primary purpose of the AHRQ Mentored Research Scientist Research Career Development Awards (K01) program is to prepare qualified individuals for careers that have a significant impact on the quality, safety, efficiency, and effectiveness of health care for all Americans. This program represents the continuation of an AHRQ program that provides support and "protected time" to individuals with a research doctoral degree for an intensive, supervised research career development experience in health services research. The K01 award can be used both by individuals who propose to newly embark in health services research training and those who had a hiatus in their research careers because of illness or family circumstances. The K01 award is also available to promote research workforce diversity by providing enhanced research career development opportunities.

NCI Transition Career Development Award to Promote Diversity (K22)

PAR-08-047

NCI

This Funding Opportunity Announcement (FOA) represents the continuation of an NCI program to make possible the diversification of the cancer research workforce via facilitation of the transition of investigators from minority groups underrepresented in biomedical research, primarily those with clinical doctoral degrees as well as those with doctoral degrees working in the areas of cancer prevention, control, behavioral, or population science research, from the mentored stage of career development in academic cancer research to the independent stage. This goal is achieved by providing protected time through salary and research support for 3 years to: postdoctoral individuals or junior faculty in mentored positions transitioning into their first independent position; and investigators within the first 2 years of their first independent cancer research position, to initiate and develop their independently-supported cancer research programs.

Amount: 3 years of salary (up to \$75,000 per annum plus fringe benefits) and research support up to \$50,000 per annum.

Research Experiences for Undergraduates (REU)

NSF-09-598

National Science Foundation (NSF)

The Research Experiences for Undergraduates (REU) program supports active research participation by undergraduate students in any of the areas of research funded by the National Science Foundation. REU projects involve students in meaningful ways in ongoing research programs or in research projects specifically designed for the REU program. This solicitation features two mechanisms for support of student research: (1) REU Sites are based on independent proposals to initiate and conduct projects that engage a number of students in research. REU Sites may be based in a single discipline or academic department, or on interdisciplinary or multi-department research opportunities with a coherent intellectual theme. Proposals with an international dimension are welcome. A partnership with the Department of Defense supports REU Sites in DoD-relevant research areas. (2) REU Supplements may be requested for ongoing NSF-funded research projects or may be included as a component of proposals for new or renewal NSF grants or cooperative agreements.

Undergraduate student participants in either Sites or Supplements must be citizens or permanent residents of the United States or its possessions.

Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Research Training Grants (T32) and (T35)

PA-10-036 and PA-10-037

National Institutes of Health (NIH)

multiple institutes

The National Institutes of Health (NIH) will award Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Research Training Grants (T32) to eligible institutions as the primary means of supporting predoctoral and postdoctoral research training to help ensure that a diverse and highly trained workforce is available to assume leadership roles related to the Nation's biomedical, behavioral and clinical research agenda. The primary objective of the T32 program is to prepare qualified individuals for careers that have a significant impact on the health-related research needs of the Nation. This program supports predoctoral and postdoctoral research training programs (including those with short term research training) at domestic institutions of higher education with the T32 funding mechanism. Note that programs solely for short-term research training should not apply to this announcement, but rather the separate (T35) NRSA Short-Term Institutional program exclusively reserved for predoctoral and/or postdoctoral level short-term research training programs

Jointly Sponsored Ruth L. Kirschstein National Research Service Award Institutional Predoctoral Training Program in the Neurosciences (T32)

PAR-10-116

National Institutes of Health (NIH)

multiple institutes

The Jointly Sponsored NIH Predoctoral Training Program in the Neurosciences supports broad and fundamental, early-stage graduate research training in the neurosciences via institutional NRSA research training grants (T32) at domestic institutions of higher education. Trainees are supported during years 1 and 2 of their graduate research training when they are typically not committed to a dissertation laboratory. The primary objective is to prepare qualified individuals for careers in neuroscience that have a significant impact on the health-related research needs of the Nation.

Mentored Research Scientist Development Award (Parent K01)

PA-10-056

National Institutes of Health (NIH)

multiple institutes

The purpose of the NIH Mentored Research Scientist Development Award (K01) is to provide support and protected time (three, four, or five years) for an intensive, supervised career development experience in the biomedical, behavioral, or clinical sciences leading to research independence. Although all of the participating NIH Institutes and Centers (ICs) use this support mechanism to support career development experiences that lead to research independence, some ICs use the K01 award for individuals who propose to train in a new field or for individuals who have had a hiatus in their research career because of illness or pressing family circumstances. Other ICs utilize the K01 award to increase research workforce diversity by providing enhanced research career development opportunities. Prospective candidates are encouraged to contact the relevant NIH staff for IC-specific programmatic and budgetary information: Table of Institute and Center Contacts.

Research Supplements to Promote Diversity in Health-Related Research

PA-08-190

National Institutes of Health (NIH)

The National Institutes of Health (NIH) and the Centers for Disease Control and Prevention (CDC) hereby notify Principal Investigators holding specific types of NIH research grants, listed in the full Funding Opportunity Announcement (FOA) that funds are available for administrative supplements to improve the diversity of the research workforce by supporting and recruiting students, postdoctorates, and eligible investigators from groups that have been shown to be underrepresented. Although the administrative supplements supported under this program provide funding for less than one percent of all individuals involved in NIH supported research, the NIH has found these awards to be an effective means of encouraging institutions to recruit from currently underrepresented groups. Administrative supplements must support work within the scope of the original project.

Ruth L. Kirschstein National Research Service Award (NRSA) for Individual Predoctoral Fellows in Nursing Research (F31)

PAR-09-227

National Institute of Nursing Research

This FOA issued by the National Institute of Nursing Research (NINR/NIH), National Institutes of Health, encourages Individual Predoctoral Fellowship (F31) applications from institutions/organizations that propose to increase the number of nurses prepared with a doctoral degree in order to meet the demands for adequately trained behavioral, biological, and biobehavioral scientists. NINR is particularly interested in facilitating the progress of students who are in research training programs for recent nursing graduates and students in BSN to PhD programs. This fellowship program will provide predoctoral training support for doctoral students. The applicant must propose a research training program and dissertation research that is consistent with the scientific mission of the NINR. Research topics and skills that will serve as a foundation for an ongoing program of research are of particular interest. The research training experience must enhance the applicant's conceptualization of research problems and research skills, under the guidance and supervision of a committed mentor who is an active and established investigator in the area of the applicant's proposed research. The research training program should be carried out in a research environment that includes appropriate human and technical resources and is demonstrably committed to the research training of the applicant in the program he/she proposes in the application.

NIDDK Small Grants for Clinical Scientists to Promote Diversity in Health-Related Research (R03)

PAR-09-223

National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)

Office of Dietary Supplements (ODS)

The purpose of this funding opportunity announcement (FOA) is to provide support for clinical scientists from underrepresented racial/ethnic backgrounds, disadvantaged backgrounds or clinical scientists with disabilities to conduct small research projects in the area of diabetes, endocrinology, metabolism, digestive diseases, hepatology, obesity, nutrition, kidney, urology, or hematology. The NIDDK and the ODS recognize the need to promote diversity in the health-related workforce by increasing the number of highly trained clinical researchers from diverse backgrounds conducting research in areas of importance to the NIDDK. This FOA is aimed at New Investigators (see Section III.1.B. for definition) who hold a health professional doctoral degree or other clinical doctoral degree AND who are from a group that have been shown to be underrepresented in biomedical research (see eligible PD/PI for full definition). The R03 grant mechanism supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is intended to support small research projects that can be carried out in a short period of time with limited resources.

NEI Ruth L. Kirschstein National Research Service Award (NRSA) Institutional Research Training Grants (T32) for Statistical Genetics and Genome Informatics

RFA-EY-10-001

National Eye Institute (NEI)

The NEI Institutional Research Training Grants (T32) for Statistical Genetics and Genome Informatics is a Ruth L. Kirschstein National Research Service Award program that is intended to support predoctoral and postdoctoral training at institutions having the potential to develop meritorious training programs in genomic medicine, computational genomics, and statistical genetics. The goal of this program is to initiate a training program to develop ophthalmic statistical genetics and bioinformatics research skills critical for investigators seeking to identify genes and genetic variations underlying ocular diseases. This training program is designed to attract individuals in early career stages, in order to increase their knowledge and awareness of research in the genetics of ophthalmic disorders, and to encourage them to pursue research career opportunities in these scientific fields. Such training will help meet a growing need for investigators trained in computational genomics related to basic biomedical, clinical, and translational ophthalmic research.

Amount: \$1,500,000

Midcareer Investigator Award in Patient-Oriented Research (K24)

PA-08-151

Health and Human Services; Multiple Agencies

The purpose of the Midcareer Investigator Award in Patient-Oriented Research is to provide support to mid-career health-professional doctorates or equivalent who are typically at the Associate Professor level or the equivalent (see Section III. Eligible Individuals) for protected time to devote to patient-oriented research (POR) and to act as research mentors primarily for clinical residents, clinical fellows and/or junior clinical faculty. The intent of this award is two-fold: 1) to enable mid-career clinician scientists to devote more time and to augment their capabilities in patient-oriented research; and 2) to enable mid-career clinical scientists to mentor new clinical investigators in the conduct of patient-oriented research. An award recipient who continues to have an independent peer-reviewed patient-oriented research program and continues to provide mentoring to new investigators can continue to contribute to the overall goals of the program after being promoted to Full professor.

Amount: 3-5 years support

LOI: N/R

Deadline: multiple

W81XWH-10-PCRP-PRTA
W81XWH-10-PCRP-PBRA
W81XWH-10-PCRP-PCTA
DOD

Congressionally Directed Medical Research Programs (CDMRP)

The mission of the Prostate Cancer Research Program is to fund research that will eliminate death and suffering from prostate cancer.

Multiple awards are available please see website for details.

Health Disparity Research Award

Health Disparity Training Award

Laboratory - Clinical Transition Award

Physician Research Training Award

Population-Based Research Award

Prostate Cancer Training Award

Amount: maximum \$750,000

LOI: May 5, 2010

Deadline: May 26, 2010

To learn more: <http://cdmrp.army.mil/funding/pcrp.htm>

Key Words: Prostate Cancer, Health Disparity, Epidemiology, Treatment and Prevention of, Overtreatment of, Biomarkers, Staging and Grading, Progression of Disease

DoD Tuberos Sclerosis Complex Career Transition Award

W81XWH-10-TSCRCP-CARTA

DOD

Congressionally Directed Medical Research Programs (CDMRP)

The CARTA supports TSC researchers during the transition from postdoctoral training to an independent position. This award will cover up to two years of postdoctoral training followed by up to two years of a faculty-level position. Under this award mechanism, the postdoctoral candidate is considered the Principal Investigator (PI). DOD FY10 Tuberos Sclerosis Complex Career Transition Award 3 Important aspects of this award are as follows: • The award covers the last two years of a postdoctoral fellowship and the first two years of an independent faculty position. • Career transition and development plans must be clearly articulated. • A mentor must be named who will support and guide the PI during the postdoctoral period of the award. • All applications must include preliminary data relevant to TSC research and the proposed project. Clinical trials are not allowed under this award mechanism. PIs wishing to apply for funding for a clinical trial should utilize the Clinical Research Award mechanism.

Amount: \$338,000

LOI: April 29, 2010

Deadline: May 20, 2010

Key Words: TSC Management, Skin, Epigenetic Factors, Cardiac Involvement, Metabolic and Nutritional Effects, Tuberos Sclerosis

Pilot and Feasibility Awards

Research Grants

LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award

Cystic Fibrosis Foundation Therapeutics, Inc. (CFFT)

The CF Foundation (CFF) offers competitive awards for research related to cystic fibrosis. Studies may be carried out at the subcellular, cellular, animal, or patient levels. Two of these funding mechanisms include Pilot and Feasibility Awards and Research Grants. Since these applications are reviewed by the CFF's Research and Research Training Committee, those proposals that include methodologies requiring sampling of materials from human subjects will only be considered under this mechanism if the sampling method constitutes minimal patient risk (e.g., venipuncture) and patient samples or data are anonymous.

For applications where more invasive procedures are proposed or where patient samples or data will not be anonymous, please submit a Letter of Intent for a Clinical Research Award.

Also, the CF Foundation offers physician-scientist training awards, including the LeRoy Matthews Physician/Scientist Award and the Harry Shwachman Clinical Investigator Award.

Amount: varies

LOI: the CF Foundation will consider NIH applications that have received a competitive score but missed the payline under the CFF/NIH-unfunded award mechanism. These applications are accepted on an on-going basis.

Deadline: first Wednesday in September

Key Words: **Cardiovascular, Stroke, Fellowships**

Improving Patient Safety through Simulation Research (R18)

RFA-HS-10-018

Agency for Healthcare Research and Quality (AHRQ)

Center for Outcomes and Evidence (COE)

The Agency for Healthcare Research and Quality (AHRQ) is interested in funding a diverse set of projects that develop, test and evaluate various simulation approaches for the purpose of improving the safe delivery of health care. Simulation in health care predominately is a training technique that exposes individuals and teams to realistic clinical challenges through the use of mannequins, task trainers, virtual reality, or standardized patients, and allows participants to experience in real-time the consequences of their decisions and actions. The principal advantage of simulation is that it provides a safe environment for health care practitioners to acquire valuable experience without putting patients at risk. Simulation also can be used as a test-bed to improve clinical processes and to identify failure modes or other areas of concern in new procedures and technologies that might otherwise be unanticipated and serve as threats to patient safety. Applications that address a variety of clinical settings are sought.

Amount: \$1,050,000

LOI: N/R

Deadline: June 21, 2010

Change in Application Receipt Date for AHRQ Funding Opportunity Announcement (FOA) RFA-HS-10-018

NOT-HS-10-015

Agency for Healthcare Research and Quality (AHRQ)

This Notice is to inform the scientific community that AHRQ is extending the application due date for AHRQ Funding Opportunity Announcements (FOA), RFA-HS-10-018, Improving Patient Safety through Simulation Research (R18), (see <http://grants.nih.gov/grants/guide/rfa-files/RFA-HS-10-018.html>). The NEW application due date for this FOA is June 21, 2010 and expiration of the FOA will be on June 22, 2010. Thus, NEW Key and Submission, Review, and Anticipated Start Dates are:

Key Dates and Submission, Review, and Anticipated Start Dates

Release/Posted Date: January 21, 2010

NOTE: On-time submission requires that applications be successfully submitted to Grants.gov no later than 5:00 p.m. local time (of the applicant institution/organization).

Application Due Date(s): June 21, 2010

Peer Review Date(s): Generally four months after receipt date

Earliest Anticipated Start Date(s): Generally four months after peer review date

Expiration Date: June 22, 2010
