---------------	------------------------------------	-------------------------------

Momentum 3 Pivotal Cohort Extended Follow-Up Post-Approval Study

The objective of this PAS is to report the composite endpoint of survival to transplant, recovery, or LVAD support free of debilitating stroke or reoperation to replace the pump at 5-years post-implant in subjects who were implanted with the HM3 or HMII LVAS in the Momentum 3 IDE trial and are ongoing at the 2-year follow-up.

Pending Clinical Trials:

ONX1801.000	Siddique, A (PI); Castleberry AW (Co-I)	Period: TBD

A prospective, randomized, active (warfarin) controlled, parallel-arm clinical trial to determine if patients with an On-X aortic valve can be maintained safely and effectively on the factor Xa inhibitor apixaban.

The goal of this trials is to determine if apixaban is non-inferior to warfarin for patients with an On-X mechanical heart valve for the primary outcome of valve thrombosis and valve-related thromboembolism.

ONX1801.000	Siddique, A (PI); Castleberry AW (Co-I)	Period: TBD
