MSPCF DATA STORAGE POLICY

The MSPCF server for storing data is a revolving service and not intended to be permanent storage space. Due to the ever increasing size of mass spectrometry data output files, we must monitor and limit the amount of data we can store for each investigator, currently being up to 400 GB of space. Each January and July, MSPCF users who have data stored on the MSPCF server, will be sent an email notice requesting the removal of all data, followed by the deletion of said data from the MSPCF server. We will be as accommodating and flexible as possible for those investigators who temporarily need larger storage or need to store data for longer than 6 months. Terms and conditions are subject to revisions and changes. This policy will be reviewed annually.
